## EXECUTIVE SUMMARY

This report presents the results of a Phase I Environmental Site Assessment (ESA) performed by JHA Environmental, Inc. for Pacific Advanced Civil Engineering, Inc. (PACE) for the property designated by the City of Santa Clarita as “Site X”, Santa Clarita, California (Site).

The objective of the Phase I ESA is to identify recognized environmental conditions, historical recognized environmental conditions, and controlled recognized environmental conditions at the Site in accordance with the scope of work contained in the American Society for Testing and Materials (ASTM) Designation E 1527-13 that constitutes the standard for All Appropriate Inquiry and in accordance with JHA’s proposal dated May 16, 2018.

A government database report of available federal, state, and county agency databases was prepared by Environmental Data Resources (EDR) of Milford, Connecticut, and was reviewed by JHA to identify government regulated properties having known recognized environmental conditions and potential environmental concerns within the vicinity of the Site.

Based on the EDR database review, the Site is not identified in any of the environmental records databases searched for this report. The Site is not within 1.0 mile of a Federal Superfund property. Based on the information provided in the EDR database there is a low probability that the other listed properties have impacted the Site because of their regulatory status (case closed), their down-or cross-gradient locations and their distances from the Site.

Based on the historical aerial photographs, the Site was utilized for row crop agriculture between approximately 1900 and 1969. Chemicals such as pesticides, herbicides, and fertilizer would likely have been utilized during the Site’s historical row crop agriculture use, although information regarding use, storage, and application rates was not available. Application of agricultural chemicals for their intended use is not considered to be a release; therefore, any residual would not be considered a REC. The Site has not been utilized for agricultural use since 1969.

Based on the aerial photographs the Site has remained vacant since at least 1969.

No environmental liens or other activity and use limitations (AULs) were found for the Site.

There are no listings for the Site in the County of Los Angeles Fire Department, Health Hazardous Materials Division active and inactive Certified Unified Program Agency (CUPA) program records or Site Mitigation Unit (SMU) case records.

There are no listings related to underground storage tanks, stormwater or industrial waste for the Site in the Los Angeles County Department of Public Works Underground Storage Tank (UST) Program records.

The Site reconnaissance revealed no evidence of RECs on the Site.

Since the relatively recent moving of the railroad immediately adjacent to the south of the Site and the approximate 25 foot easement on the north side of the track, it is unlikely that the railroad has had an environmental impact on the Site.

No recognized environmental conditions were observed on the adjacent properties from the Site boundaries or from the public right-of-way. No wetlands or wetland-type vegetation were observed at the Site.

Based on the information reviewed and summarized in this report, it is JHA's professional opinion that this assessment has revealed no evidence of RECs, as defined by the ASTM Designation E1527-13, at the Site.

## 1.0 INTRODUCTION

This report provides the results of a Phase I Environmental Site Assessment (ESA) performed by JHA Environmental, Inc. (JHA) for the property designated by the City of Santa Clarita as “Site X”, Santa Clarita, California (Site). The Site is comprised of approximately 23 acres and is bounded to the north by the intermittent west-northwest flowing Santa Clara River, to the east by a mobile home park, to the south by the Southern Pacific Railroad and to the west by the steeply embanked Whites Canyon Road (Figures 1 and 2). The Site has no physical address and is currently vacant land. Assessor Parcel Number (APN) is 2836-002-922.

The objective of the Phase I ESA is to identify recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), and controlled recognized environmental conditions (CRECs) at the Site in accordance with the scope of work contained in the *American Society for Testing and Materials (ASTM) Designation E 1527-13* that constitutes the standard for All Appropriate Inquiry (AAI). As defined in ASTM Designation E1527-13, RECs include “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions”. HRECs include “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls”. CRECs include “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.”

This ESA was performed in accordance with the scope of work provided in JHA’s proposal and with the ASTM E 1527-13 scope of work for Phase I Environmental Site Assessments. In general, the assessment included a review of reasonably ascertainable current federal, state and county databases of known and potential environmentally impacted properties, a review of available city/county records, a review of available historical aerial photographs and historical maps, a review of an environmental lien search report, a Site reconnaissance to observe present conditions and an interview with a person familiar with the Site. Prior Site uses have been identified and are discussed in later sections of this report.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional (EP) as defined in 40 CFR Part 312.10. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

## 2.0 SITE DESCRIPTION

The Site is comprised of approximately 23 acres and is bounded to the north by the intermittent west-northwest flowing Santa Clara River, to the east by a mobile home park, to the south by the Southern Pacific Railroad and to the west by the steeply embanked Whites Canyon Road (Figures 1 and 2). The Site Assessor Parcel Number (APN) is 2836-002-922.

Historically, the Site has remained vacant since approximately 1969. A Quit Claim Deed was executed in 2016 transferring ownership of the Site from the County of Los Angeles to the City of Santa Clarita.

### 2.1 Physiographic Description

The Site is located in the southeast portion of Section 20, Township 4 North and Range 15 West, San Bernardino Baseline and Meridian (USGS, 1995; 7.5-Minute, Newhall, California Quadrangle). The elevation of the Site is approximately 1,382 feet above mean sea level (msl). The surface topography of the Site is generally flat, though the topography within the Site vicinity slopes gently to the west-northwest at a gradient of approximately 0.011 feet per foot. The Site lies within the Santa Clara River watershed. The Santa Clara River is immediately adjacent to the north of the Site.

### 2.2 Geology/Hydrogeology

The Site is located in the central portion of the Transverse Ranges geomorphic province of Southern California. Locally, the Site is situated on the north side of the Santa Clara River valley and is underlain by approximately 100 feet of Holocene alluvial deposits consisting of poorly sorted sands and gravels, and clay, with cobbles and boulders. Beneath the alluvium is approximately 100 feet of Pleistocene age terrace deposits consisting of crudely stratified, poorly consolidated, weakly cemented gravels, sands and silts. Beneath the terrace deposits is the late Pliocene age Saugus Formation consisting of approximately 8,500 feet of poorly-sorted and consolidated sandstones, siltstones and conglomerates. The San Gabriel Mountains flank the valley several miles to the northeast and the Santa Susana Mountains flank the valley to the southwest.

The Site is located in the East Sub-basin of the Santa Clara River Valley Groundwater Basin. There are two aquifer systems in the basin: 1) the alluvium generally underlying the Santa Clara River and tributaries, and 2) the Saugus Formation that underlies much of the entire Upper Santa Clara River area.

There is no municipal water supplied to the Site. There are no public supply water wells located within a one-mile radius of the Site according to the Environmental Data Resources (EDR) Radius Map Report (Appendix A). According to information obtained from the Los Angeles County Department of Public Works Hydrologic Records Section actively monitored groundwater wells located within a one-mile radius of the Site are as follows:

Well ID	Last Measure Date	Depth to Water (feet)	Groundwater Elevation (feet above msl)	Approximate Distance and Direction From Site (feet)
7139E	6/1/12	85	1,287	0
7139F	6/1/12	85	1,290	0
7139G	11/1/12	81	1,299	0
7148K	11/1/12	93	1,342	4,100 northeast

A review of the State Water Resources Control Board GeoTracker database shows no active clean-up site groundwater monitoring wells within one-mile of the Site. Based on general topography and relation to the Santa Clarita River it is estimated that the groundwater flow direction is to the west-northwest.

Surficial soils at the Site, according to the EDR Radius Map Report (Appendix A), are identified as Hydrologic Class B – Moderate infiltration rates. Soils are moderately well-drained coarse textures with the soil component name Cortina with sandy loam texture, at the Site.

The majority of the Site is located within a 100-year flood zone and the southeast portion of the Site is located within a 500-year flood zone according to the EDR Radius Map Report (Appendix A).

### 3.0 INVESTIGATION METHODOLOGY AND FINDINGS

JHA reviewed available reports, maps, photographs, databases, and permits regarding the history and development of the Site, and performed a reconnaissance of the Site and Site vicinity.

#### 3.1 Federal and State Database Review

A government database report of available federal, state, and county agency databases was prepared by EDR of Milford, Connecticut, and was reviewed to identify government-regulated properties having known recognized environmental conditions and potential environmental concerns within the vicinity of the Site. The radii of investigation for the Federal and State agency lists were selected in accordance with the ASTM Standards. The government databases reviewed are described in detail in the EDR report. Also included in the EDR report are maps illustrating the location of the Site relative to the listed properties.

The 2018 Office of the Assessor, County of Los Angeles, Property Tax Map of the Site provided by EDR (Appendix B) indicates the Site is included in the City of Santa Clarita, Block 2836, and is identified as APN 2836-002-922.

There are no building permit records for the Site according to the EDR Building Permit Report (Appendix C).

A summary of properties that could not be mapped by EDR, but were identified as being potentially within the Site vicinity (orphan properties), are also included in the EDR report.

Based on the database review and as shown below, the Site is not identified on any of the databases searched by EDR. The Site is not within one-mile of a Federal Superfund property.

The pertinent findings of the government database review are summarized in the following table:

Two of the above listed properties are dry cleaner sites under evaluation by the Los Angeles County Fire Department, Site Mitigation Unit and the California Department of Toxic Substances Control (DTSC). Carriage Trade Cleaners is approximately three tenths of a mile north-northwest of the Site and Soledad Cleaners is approximately nine tenths of a mile east-northeast of the Site, both of which are on the north side (opposite side) of the Santa Clara River in relation to the Site. According to the EDR search, both sites have been abated and no regulatory action has been taken since July 2007 at the Carriage Trade Cleaners site and since February 2005 at the Soledad Cleaners site. While these properties are listed, they are not considered RECs due to the distance and cross-gradient of the anticipated regional direction of groundwater flow relative to the Site.

One of the above properties, in the above EDR search, is listed as a recycling center which is not under investigation for spills or leaks into the environment.

Of the properties listed in the above EDR search with historic or active underground storage tanks (USTs) all are either not listed as sites that are under investigation for spills or leaks into the environment; or if a leak occurred (LUST), the investigation is complete and the case is closed. A search completed within a one-mile radius of the Site on the SWRCB GeoTracker database

indicated four additional LUST or cleanup program sites that were not listed in the EDR search. All of these additional sites are listed as investigation complete/case closed.

### **3.2 Oil and Gas Development**

The California Department of Conservation Division of Oil, Gas, and Geothermal Resources Online Mapping System was reviewed to assess the presence of known active or abandoned oil and gas wells within the Site vicinity. Based on the review, the Site was not identified within the designated boundaries of any oil or gas field. There is an active oil and gas field approximately one half mile south of the Site. Eleven plugged and abandoned oil/gas well locations were identified within a one-mile radius of the Site.

### **3.3 Agency Records Review**

JHA reviewed records provided by the City of Santa Clarita, the Los Angeles County Department of Public Works Underground Tanks Unit, and the Los Angeles County Fire Department Hazardous Materials Division for information concerning the Site.

#### 3.3.1 City of Santa Clarita

JHA submitted a public records request for the APN associated with the Site which yielded no information.

#### 3.3.2 County of Los Angeles Fire Department Health Hazardous Materials Division

There are no listings for the Site in the County of Los Angeles Fire Department, Health Hazardous Materials Division active and inactive Certified Unified Program Agency (CUPA) program records or Site Mitigation Unit (SMU) case records.

#### 3.3.3 Los Angeles County Department of Public Works UST Program

There are no listings related to underground storage tanks, stormwater or industrial waste for the Site in the Los Angeles County Department of Public Works Underground Storage Tank (UST) Program records.

### **3.4 Sanborn Maps, Topographic Maps, and Aerial Photograph Review**

The Sanborn Library, LLC collection was searched for the Site and fire insurance maps covering the target property were not found (Appendix D).

Copies of historical topographic maps for the years 1900, 1929/1932, 1940, 1942, 1945, 1947, 1960, 1974, 1988, 1994, 1995 and 2012 available through EDR, were reviewed by JHA for historical land use identification (Appendix E). Based on the review of available topographic maps, the historical development of the Site and vicinity was evaluated and is summarized below:

The 1900 topographic map (Fernando and San Fernando, 15-minute Quadrangles, 1:62500) shows the Santa Clara River to the north, the Southern Pacific Railroad to the south and a road adjacent to the east boundary of the Site. There two structures are shown on the Site: one is in the southeastern portion of the Site along the road; and the other is located in the west-central portion of the Site. The surrounding Site vicinity is largely undeveloped.

The 1929/1932 topographic map (Humphreys and Sylmar, 7.5-minute Quadrangles, 1:24000) shows a drainage flowing north to south across the Site in the western portion of the Site. The road that bounds the east portion of the Site is unimproved. No structures are

shown on the Site. There are more roads to the north and south of the Site, but the vicinity remains undeveloped.

The 1940 topographic map (San Fernando, 15-minute Quadrangle, 1:62500) shows very little change to the Site and Site vicinity. There are more structures present to the north and south of the Site.

The 1942 topographic map (Humphreys and Sylmar, 7.5-minute Quadrangles, 1:24000) shows no change to the Site and Site vicinity.

The 1945 and 1947 topographic maps (San Fernando, 15-minute Quadrangle, 1:62500) shows no change to the Site and Site vicinity.

The 1960 topographic map (Mint Canyon, 7.5-minute Quadrangle, 1:24000) shows no change to the Site and Site vicinity.

The 1974 topographic map (Mint Canyon, 7.5-minute Quadrangle, 1:24000) shows the mobile home park immediately adjacent to the east of the Site. There is new development to the north and south of the Site.

The 1988 and 1994 topographic maps (Mint Canyon, 7.5-minute Quadrangle, 1:24000) shows more development to the north, south and northwest. There is no longer an unimproved road to the east of the Site.

The 1995 topographic map (Mint Canyon, 7.5-minute Quadrangle, 1:24000) shows more development surrounding the Site. The Southern Pacific Railroad track has been moved to immediately adjacent to the southern portion of the Site. Whites Canyon Road now extends across the Santa Clara River and abuts the western tip of the Site.

The 2012 topographic map (Mint Canyon, 7.5-minute Quadrangle, 1:24000) shows less detail in general than the 1995 topographic map.

Copies of aerial photographs covering the Site for the years 1928, 1940, 1947, 1952, 1969, 1970, 1972, 1983, 1989, 1994, 2002, 2005, 2009, 2012 and 2016 available through EDR, were reviewed by JHA for historical land use identification (Appendix F). Based on the review of available aerial photographs, the historical development of the Site and vicinity was evaluated and is summarized below:

*Note: Seasonal vegetation and photographs with poor resolution might hinder viewing individual Site features*

The 1928 (USGS) aerial photograph (1"=500') shows a building in the south-central portion of the Site surrounded by row crop agriculture (farm). The drainage and unimproved road as described above (1929/1932 topographic map) to the west of the farm and bounding the east portion of the Site, respectively. The Southern Pacific Railroad is to the south and the Santa Clara River is to the north of the Site. The land to the north, east and south of the Site has been graded for what appears to be farmland/row crop agriculture.

The 1940 (USDA) aerial photograph (1"=500') shows that the south central and southwestern portions of the Site have been graded. The land surrounding the Site remains farmland/row crop agriculture.

The 1947 (USGS) and 1952 (USDA) aerial photographs (1"=500') shows that the majority of the Site being utilized for row crop agriculture. The land surrounding the Site remains farmland/row crop agriculture.

The 1969 (USGS) aerial photograph (1"=500') shows the mobile home park to the east of the Site under construction. New residential neighborhoods are now present across the Santa Clara River to the north. To the south beyond the Southern Pacific Railroad is the Friendly Valley Golf Course and new residential neighborhoods. The Site is now vacant land.

The 1970 (USGS), 1972 (USGS), and 1983 (USGS) aerial photographs (1"=500') shows very little change to the Site and immediate Site vicinity. There is new commercial development to the north across the Santa Clara River.

The 1989 (USDA) aerial photograph (1"=500') shows very little change to the Site and immediate Site vicinity. The Whites Canyon Road Bridge across the Santa Clara River is under construction.

The 1994 (USGS/DOQQ) aerial photograph (1"=500') shows the Site as graded west of the drainage with the completion of the Whites Canyon Road Bridge that now abuts the western tip of the Site. East of the drainage remains vacant. The Southern Pacific Railroad track has been moved to immediately adjacent to the southern portion of the Site. To the south of the new track is the new Via Princessa Metrolink Station and parking lot.

The 2002 (USDA), 2005 (USDA/NAIP), 2009 (USDA/NAIP), 2012 (USDA/NAIP), and 2016 (USDA/NAIP) aerial photographs show the Site remains vacant land with very little change to the developed land surrounding the Site.

Based on the topographic maps, the Site was mostly undeveloped land from at least 1900. Based on the historic aerial photographs, the Site was utilized for farmland/row crop agriculture until at least 1969. As confirmed by the aerial photographs, the Site has remained vacant land since 1969.

In general, no unusual features, such as pits, excavations, or significant fills were observed on the topographic maps or the aerial photographs in the Site vicinity.

Based on the historical aerial photographs, the Site was utilized for row crop agriculture between approximately 1900 and 1969. Chemicals such as pesticides, herbicides, and fertilizer would likely have been utilized during the Site's historical row crop agriculture use, although information regarding use, storage, and application rates was not available. Application of agricultural chemicals for their intended use is not considered to be a release; therefore, any residual would not be considered a REC. The Site has not been utilized for agricultural use since 1969.

### **3.5 City Directory Abstract**

A City Directory abstract prepared by EDR (Appendix G) was reviewed for the Site. Since the Site has no physical address the Site was not listed in the City Directory abstract. The City directories show adjacent properties to include private residences, businesses and schools.

### **3.6 Environmental Lien Search Report**

An Environmental Lien Search Report provided by EDR, was reviewed by JHA. The title for Site APN 2836-002-922 is vested in the City of Santa Clarita as received from the County of Los Angeles in a Quit Claim Deed executed on December 20, 2016 and recorded on April 27, 2017.

There are no environmental liens or Other Activity and Use Limitations (AULs) listed in the EDR report for the Site. A copy of the Environmental Lien Search Report is provided as Appendix H.

### **3.7 Site Reconnaissance**

JHA performed a Site reconnaissance on July 13, 2018. The Site remains vacant as described in Section 3.4. Unattended low lying grass, shrubs and a few small trees cover the Site. The drainage swale extends north towards the Santa Clara River from a controlled diversion pipe immediately north of the railroad track in the south-central portion of the Site. There are no public utilities supplied to the Site. According to information obtained from the Los Angeles County Department of Public Works Hydrologic Records Section there are three groundwater wells (last monitored in 2012) located on Site (7139E, 7139F and 7139G), though the wells were not observed during the Site reconnaissance. Overall the Site was environmentally unremarkable. Photographs taken during the Site Reconnaissance showing the current Site and vicinity are provided in Appendix I.

### **3.8 Adjacent Property Reconnaissance**

Adjacent properties in the immediate Site vicinity were observed by JHA for evidence of recognized environmental conditions. The intermittent west-northwest flowing Santa Clara River bounds the northern extent of the Site; immediately east of the Site is a mobile home park; the Southern Pacific Railroad bounds the southern portion of the Site; and the steeply embanked Whites Canyon Road bounds the western extent of the Site.

Since the relatively recent moving of the railroad immediately adjacent to the Site (after 1989 and prior to 1994) and the approximate 25 foot easement on the north side of the track, it is unlikely that the railroad has had an environmental impact on the Site.

Overall, no recognized environmental conditions were observed on the adjacent properties from the boundary of the Site or from the public right-of-way.

## 4.0 SUMMARY OF NON-ASTM ISSUES

### 4.1 Asbestos

The evaluation of asbestos containing materials (ACMs) in buildings is excluded from ASTM E1527-13, though the presence of ACMs can be of environmental concern if present. Since there are no man-made buildings at the Site, the presence of ACMs is unlikely.

### 4.2 Mold and Legionella Bacteria

The evaluation of mold and legionella in building materials is excluded from ASTM E1527-13, though the presence of mold and legionella can be of environmental concern if present. Since there are no man-made buildings at the Site, the presence of mold and legionella is unlikely.

### 4.3 Lead-Based Paint

The evaluation of lead-based paint (LBP) in building materials is excluded from ASTM E1527-13, though the presence of LBP can be of environmental concern if present. Since there are no man-made buildings at the Site, the presence of LBP is unlikely.

### 4.4 Lead in Drinking Water

There is no municipal water supplied to the Site, therefore there is no risk of lead in drinking water.

### 4.5 Radon

Radon is a colorless, tasteless, radioactive gas that has been linked to a possible increased risk of lung cancer. According to the EPA, exposure to 4.0 picoCuries per liter of air (pCi/L) of radon gas on a regular basis increases the risk of lung cancer. The EPA has recommended a maximum indoor residential radon exposure limit 4.0 pCi/L.

According to the U.S. EPA Map of Radon Zones and the EDR Radius Map Report GeoCheck Physical Setting Source Map Findings, the Site is located in Radon Zone 2, where median indoor radon concentrations are between 2.0 - 4.0 pCi/L. Based on the EPA map data, there are moderate levels of radon in the area. The only true way to determine the presence of radon is through non-destructive testing, which was not part of this Phase I ESA.

## 5.0 SUMMARY OF FINDINGS

The following is a summary of the findings of this Phase I ESA report:

- The Site is not within 1.0 mile of a Federal Superfund property.
- Based on the database review, there is a low probability that the other listed properties have impacted the Site because of their regulatory status (case closed), their down- or cross-gradient locations and/or their distances from the Site.
- Based on the historical aerial photographs, the Site was utilized for row crop agriculture between approximately 1900 and 1969. Chemicals such as pesticides, herbicides, and fertilizer would likely have been utilized during the Site's historical row crop agriculture use, although information regarding use, storage, and application rates was not available. Application of agricultural chemicals for their intended use is not considered to be a release; therefore, any residual would not be considered a REC. The Site has not been utilized for agricultural use since 1969.
- Based on the aerial photographs the Site has remained vacant since at least 1969.
- No environmental liens or other activity and use limitations (AULs) were found for the Site.
- There are no listings for the Site in the County of Los Angeles Fire Department, Health Hazardous Materials Division active and inactive Certified Unified Program Agency (CUPA) program records or Site Mitigation Unit (SMU) case records.
- There are no listings related to underground storage tanks, stormwater or industrial waste for the Site in the Los Angeles County Department of Public Works Underground Storage Tank (UST) Program records.
- The Site reconnaissance revealed no evidence of RECs on the Site.
- Since the relatively recent moving of the railroad, immediately adjacent to the south of the Site and the approximate 25 foot easement on the north side of the track, it is unlikely that the railroad has had an environmental impact on the Site.
- No recognized environmental conditions were observed on the adjacent properties from the Site boundaries or from the public right-of-way.
- No wetlands or wetland-type vegetation were observed at the Site.

Based on the information reviewed and summarized in this report, it is JHA's professional opinion that this assessment revealed no evidence of recognized environmental conditions, as defined, at the Site.

## 6.0 LIMITATIONS

This report has been prepared by JHA Environmental, Inc. (JHA) for Pacific Advanced Civil Engineering, Inc. (PACE) as a Phase I Environmental Site Assessment (ESA) for the property designated by the City of Santa Clarita as “Site X”, Santa Clarita, California (Site).

Inferences with respect to potential subsurface contamination are based on a review of readily available government and historical records, and Site reconnaissance. The findings and interpretations in this report have been developed based on a review of existing information pertaining to the Site. It should be recognized that subsurface contamination can vary laterally and vertically below a given site.

The Curriculum Vitae of the Environmental Professional who prepared this report is provided in Appendix J.

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/30/2018 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 11 LUST sites within

### State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### **US CDL: Clandestine Drug Labs**

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### USGS TOPOGRAPHIC MAP

Target Property Map:	5636825 MINT CANYON, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: Cortina

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

# The EDR Property Tax Map Report

## EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

# EDR BUILDING PERMIT REPORT

## About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

## ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

## Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

## GLOSSARY

### General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

## GLOSSARY

### Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

### Sample Building Permit Data

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

## EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

**Thank you for your business.**

Please contact EDR at 1-800-352-0050  
with any questions or comments.

## **QUITCLAIM DEED**

For a valuable consideration, receipt of which is hereby acknowledged, the COUNTY OF LOS ANGELES, a body corporate and politic (hereinafter referred to as COUNTY), does hereby remise, release, and forever quitclaim to the CITY OF SANTA CLARITA, a municipal corporation (hereinafter referred to as CITY), all its right, title, and interest in and to the real property in the City of Santa Clarita, County of Los Angeles, State of California, described in Exhibit A attached hereto and by this reference made a part hereof.

Subject to all easements, rights, rights of way, reservations, covenants, conditions, and all other matters of record, and to the following express condition, which CITY by its acceptance of this Quitclaim Deed agrees to keep and perform, viz:

CITY agrees to use the real property conveyed hereby for public recreation purposes. In the event that CITY should fail or refuse to use said real property for public recreation purposes, title to said real property shall revert to COUNTY upon receipt of thirty (30) days written notice from COUNTY to said CITY.

CITY further agrees that in the event that such reversion occurs, it will, at no cost to COUNTY, execute any documents to reflect, of record, that said title has reverted back to COUNTY.

**EXCEPTING AND RESERVING** all oil, gas, petroleum, and other hydrocarbons and minerals, but without the right of entry to the surface of said land.

Pursuant to the authority delegated on December 20, 2016,  
by the Board of Supervisors of the County of Los Angeles, this Quitclaim Deed has been executed  
on behalf of said COUNTY by the Director of the County of Los Angeles Department of Public Works  
on the 30<sup>th</sup> day of March, 2017.
