> - Cause the following increase in delay at an intersection maintained by the City that would operate (with the Project) at LOS D or worse:
>
> LOS D with the Project: more than four-second increase in delay
>
> LOS E or F with the Project: more than two-second increase in delay

As described above, traffic impacts to the LOS at the intersection of Railroad Avenue and 13th Street would not be a significant impact under CEQA. In addition, the intersection of Railroad Avenue and 13th Street would not be affected by Project traffic because it would still operate at an acceptable LOS. LOS D is the target LOS citywide. A change from LOS C to LOS D at any intersection is not considered a significant impact by the City.

Response to Comment No. O8-21

The comment notes a concern that the completion of the Dockweiler Drive Extension improvements is not a condition of commencing operations for the Project. Please refer to Response to Comment No. O8-5 above.

Response to Comment No. O8-22

The comment questions the conclusion of the Draft EIR that the Project will have no significant impact, without any mitigation measures, on emergency evacuation. The Transportation Assessment (Appendix L of the Draft EIR) contains a specific evacuation memo (Appendix H) that discusses the difference between existing evacuation conditions and evacuation conditions with the Project both without and with the roundabout and without and with the Dockweiler Drive Extension Project. In all cases, the evacuation times would improve with the Project due to the off-site improvements that would be implemented by the Project. As discussed in Response to Comment No. O8-6, these off-site improvements would facilitate the evacuation of the Placerita Canyon area by reducing the evacuation congestion period at Arch Street and 12th Street. The traffic signal intersection design, when compared to the roundabout design or existing conditions, would provide for the most efficient traffic operations, as well as accommodate horse trailers more easily, under an evacuation scenario.

Response to Comment No. O8-23

The comment questions the degree of analysis regarding the roundabout and as related to emergency evacuation. The Transportation Assessment evaluated in detail both the roundabout and the signalized intersection alternatives and concluded that either alternative would work satisfactorily under normal conditions. However, that would not be the case under evacuation conditions as described in the comment. The 1-lane roundabout design would have less capacity for evacuation operations than a traffic signal. In addition, the roundabout design would also have geometric constraints that do not accommodate horse trailers as easily. A thorough analysis of the comparison between the traffic signal and roundabout was included in the study. A signalized intersection design would provide for the most efficient traffic operations under an evacuation scenario when compared with the roundabout or existing conditions.

Response to Comment No. O8-24

The comment states that the most critical aspect of environmental analysis for the Project is its impact on the safety of the surrounding community. The comment also notes that the Project is located at the only emergency exit point for the Placerita Canyon Community and that the current evacuation time for the community is approximately 2.5 hours, which according to the comment, is low because it does not factor in the number of horses that will need to be evacuated.

The evacuation analysis measured the time it took for a standard mix of vehicles (auto, trucks, trailers) to move from the Canyon to Railroad Avenue. To the extent that the comment is correct in that there would be an inordinate number of horse trailers leaving the Canyon, the trailers would have the same effect on all three evacuation scenarios analyzed (Existing Condition, Future Condition with a Roundabout, and Future Condition with a Traffic Signal) and, thus, would not change the conclusions that with the Project evacuation times would improve and that the Future Condition with a Traffic Signal would have a shorter evacuation time that the Future Condition with a Roundabout. As discussed in previous responses above, the evacuation scenario with the Project and a traffic signal design would provide the horse trailers with additional roadway capacity and easier maneuverability through the corridor.

In terms of the added footnote, the evacuation analysis did not assume that the second exit point would be available for any Placerita Canyon neighbors to use or that the Dockweiler Drive Extension Project would be used during an evacuation scenario.

Response to Comment No. O8-25

The comment introduces a third-party reviewer, Rob Lewin with Resolute Associates, and briefly summarizes his qualifications. The comment states that the Project's Draft EIR focused only on the safety and evacuation of the Project, not the adjacent communities. The commenter correctly states that the Fire Protection Plan (FPP) prepared for the Project, itself, did not include an evacuation analysis. However, an extensive evacuation modeling analysis (included as Appendix H of the Transportation Assessment in Appendix L of the Draft EIR) was conducted that evaluated a worst-case wildfire or other emergency that would require all evacuees to leave the Project area through the intersection of Railroad Avenue and 13th Street to the west. This evacuation analysis did not focus on the evacuation of the Project but exclusively of the surrounding Placerita Canyon neighborhood. The analysis accounted for the existing population in the Placerita Canyon neighborhood and evaluated evacuation times both without and with the Project to determine the Project's impact during an evacuation event. Page 4 of Appendix G of the Transportation

Assessment contains an explanation that one of the key considerations of the evacuation analysis in the Placerita Canyon area involves the need to be able to evacuate the homes, schools, and businesses in the Canyon in the event of a fire or natural disaster. Accordingly, the evacuation focused on the Canyon neighbors, not on the Project employees. The travel times cited in the analysis are from 12th Street and Hacienda Lane to points north and south on Railroad Avenue.

Page 4 of Appendix G of the Transportation Assessment also states that, as required by Evacuation Analysis procedures, the analysis simulates worst-case conditions assuming that all exiting traffic would use the Railroad Avenue and 13th Street intersection to access the City's road network. Under this analysis, and contrary to the comment, it was assumed that no evacuation would occur via Placerita Canyon Road or the future Dockweiler Drive connection. However, as stated in Response to Comment No. O8-5 above, the Project would implement off-site improvements, including widening of 13th Street, Arch Street, and 12th Street and the signalization of the intersections of 13th Street and Arch Street and 12th Street and Arch Street, and independent of the Dockweiler Drive Extension Project. As such, even though Table 24B assumed that Intersection #17 would include the Dockweiler Drive Extension Project, Dockweiler Drive would not be used, but improvements to the intersection that would be implemented by the Project were still taken into account to determine potential evacuation impacts on the Placerita Canyon Community. These improvements, which include a signalized intersection design, were determined to provide for the most efficient traffic operations under an evacuation scenario when compared with the roundabout or existing conditions. In addition, the signalized intersection design was determined to provide the horse trailers with additional roadway capacity and easier maneuverability through the corridor.

As relates to the comment regarding the wildfire analysis, the FPP and the Traffic Evacuation Assessment are two separate analyses. The Fire Protection Plan specifically addressed the potential fire risk associated with the Project's land uses and identified requirements for water supply, fuel modification and defensible space, access, building ignition and fire resistance, and fire protection systems, while the Traffic Evacuation Assessment analyzed the anticipated performance along the Dockweiler Corridor, which comprises 12th Street, Arch Street, 13th Street, and Railroad Avenue, as discussed above.

Response to Comment No. O8-26

The comment provides an opinion regarding the adequacy of the fire safety analysis based on an assumption that the Dockweiler Drive Extension improvements would not be constructed by Project completion. Please refer to Response to Comment No. 08-25 above regarding the Project's evacuation network improvements and for an explanation differentiating the Project's Fire Protection Plan from the Traffic Evacuation Assessment. Please also refer to Response to Comment No. O8-5 for an explanation of the Project's independent utility from the Dockweiler Drive Extension Project.

Response to Comment No. O8-27

The comment accurately notes the fire behavior modeling output from Table 3 of the Project's FPP, which is included as Appendix N of the Draft EIR. The comment suggests that the Draft EIR is fatally flawed due to lack of mitigation measures to address Project impacts on evacuation times. As discussed in Response to Comment No. O8-25, the evacuation analysis conducted by Gibson concluded that Project would improve evacuation times for the Placerita Canyon community. The evacuation analysis provides the decision-makers with comparisons of evacuation times under Existing Conditions, Future Conditions with the Roundabout, and Future

Conditions with Traffic Signals. The scenario measuring Future Conditions with Traffic Signals reduces the evacuation time for the Canyon neighborhoods by almost 50 percent, offering substantial benefits to the Canyon residents in an evacuation situation.

Response to Comment No. O8-28

The comment indicates that there is an impact on wildfire safety that should have been mitigated through creation of a new emergency egress point through the Circle J development. As discussed in the public meeting before the Planning Commission on May 16, 2023, an additional access point to the Project Site along Railroad Avenue near 15th Street was considered. An evaluation of this location showed that the railroad tracks were too close to Railroad Avenue to permit the construction of a grade-separated rail crossing. The Southern California Regional Rail Authority (SCRRA) strongly discourages new grade crossings, and new grade crossings are not allowed unless the member agency (i.e., City of Santa Clarita) requests and receives approval from the SCRRA Board, which will require the City to close a nearby crossing. Pursuant to the California Public Utilities Commission General Order 88-B, a new application must be made for new crossings, and the new crossing would be required to eliminate an existing at-grade crossing. In addition, the Federal Highway Administration Railroad-Highway Grade Crossing Handbook states that new grade crossings, particularly on mainline tracks, should not be permitted unless no other viable alternatives exist and that, even in those circumstances, consideration should be given to closing one or more existing crossings.

The Transportation Assessment in the Draft EIR evaluated the access points to the Project and found that the proposed Project driveways and adjacent intersections would operate at acceptable LOS, meeting City of Santa Clarita thresholds.

The Project does not own the land connecting the north auxiliary parking lot and the Circle J Ranch and, therefore, is not in a position to offer an exit to the north.

Response to Comment No. O8-29

The comment claims that the alternatives analysis of the Draft EIR is defective and inadequate due to the deficiencies in the remainder of the EIR analysis in that almost all impacts were determined to be less than significant. However, as demonstrated in Response to Comment Nos. O8-3 through O8-28 and O8-33 through O8-82, the Draft EIR fully complied with all of CEQA's mandates, and the comment presents no new information or substantial evidence to conclude that the Draft EIR is defective and inadequate. The comment is noted for the record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. O8-30

The comment claims that the reasons to reject the Saugus Speedway as an alternative site are not valid and questions why the loss of housing stock was given as a reason to reject the alternative site, but the loss of housing from development of the Project at the Project Site was not considered. The Saugus Speedway site is listed as a suitable site in the City's Housing Element sites inventory. Consequently, development of the Project on this site could have a significant impact on the City's population and housing projections. On the contrary, the Project Site, which is located within a High Quality Transit Area and a Transit Priority Area, is not listed as a suitable site in the City's Housing Element sites inventory buy is suitable to accommodate a large employment generator in a housing-rich area, while contributing to the City's economic development and the growth of the entertainment industry as one of the City's four targeted

industry sectors. Regardless, the Draft EIR evaluated an adequate and reasonable range of alternatives, and the comment provides no reason why the Saugus Speedway site should be considered as a means to reduce any potentially significant environmental impacts of the Project.

Response to Comment No. O8-31

The comment claims that the Draft EIR failed to meet CEQA standards on several levels, as well as the lack of mitigation measures to address the Project's significant impacts. However, as demonstrated in Response to Comment Nos. O8-3 through O8-28 and O8-33 through O8-82, the Draft EIR fully complied with all of CEQA's mandates, while the comment provides no specific evidence to support these claims. The comment states it reserves the right to continue to provide comments on the Draft EIR and Final EIR until certification and the filing of the Notice of Determination. The comment is noted for the record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. O8-32

The comment states that MAT Engineering conducted a peer review of the transportation/traffic analysis and provides the perspectives in Comment Nos. O8-33 through O8-66. The comment also includes a description of the Project, including parking and vehicular access, and a reference to the previous project proposed for the Project Site, and all the documents that were peer-reviewed. The comment does not address the adequacy of the Draft EIR. Accordingly, the comment is noted, and no additional response is warranted.

Response to Comment No. O8-33

The comment claims that the transportation analysis failed to include an exhibit or data showing the magnitude of trips added generated by the 36 related projects to each movement of the study intersections. Future traffic volumes are based on the City's transportation model and include vehicular demand from all known and potential projects. The City's model was checked to verify that sufficient growth was assumed in each Traffic Analysis Zone to accommodate the known related projects shown in Figure 7 and Table 5 of the Transportation Assessment (Appendix L of the Draft EIR).

Response to Comment No. O8-34

The comment correctly notes that trip generation for the Project was indeed based on studios traffic studies conducted for studio projects in the Southern California region. The studio locations covered a wide range of locations and area density, and the trip rates were found to be similar.

The comment claims that since the only public transportation available in Santa Clarita is the local bus system and Metrolink, the trip generation of similar uses from Los Angeles reflects higher use of public transportation and other modes of transport, resulting in a lower trip generation estimate for a site in Santa Clarita. The rates used for the Project were approved by the City of Santa Clarita based on similar rates use in other studio campus studies in the City. In addition, based on the Project's proximity to the Jan Heidt Newhall Metrolink Station, it is entirely appropriate to assume that a percentage of employees would use transit. The Project would be conditioned to either (1) pay an in-lieu fee to contribute towards improvements or (2) construct a connection to provide a link for pedestrians and bicyclists between the Project Site and the Jan Heidt Newhall Metrolink Station.

The comment questions how the breakdown of trip rates for sound stages, support uses, and production office uses was obtained. The breakdown of trip rates into studio and production support areas was based on detailed studies conducted for Universal Studios Hollywood and verified with empirical counts at Television City studios in Los Angeles.

Response to Comment No. O8-35

The comment claims that the Draft EIR did not indicate how the trip generation from the other studios' traffic studies was considered and questions how the trip generation fluctuate throughout the day and whether the Project's trip generation was for mid-day, later in the evening, or weekend conditions. The City of Santa Clarita requires that the analysis of roadway conditions be performed during the peak hour of roadway traffic, which represents the worst-case scenario and is typically the commuter peak hours in the morning and afternoon peaks. Therefore, the combination of Project traffic with background traffic during the mid-day, evening, or weekend time periods would not exceed the traffic volumes during the peak hours studied in the Transportation Assessment. Accordingly, the conditions mentioned in the comment do not require further consideration as the impacts from the worst-case scenario have already been identified.

Response to Comment No. O8-36

The comment correctly notes that one of the incentives applied to applicable projects in the JCOZ is a 20-percent reduction in parking but questions whether the reduction applies to the Project considering its unique nature. The Parking Analysis Form submitted to the City includes a shared parking demand analysis that considers the daily and hourly parking patterns of the various land use components of the Project to show whether the parking supply, even with the JCOZ reduction included, would provide sufficient parking to meet the Project's parking peak demand.

The required parking ratios for the Project were determined by applying parking ratios from the City's Unified Development Code (UDC) to the individual buildings based on the use of each building and determined that the required parking would be 2,969 spaces. After the application of the allowable 20-percent reduction of parking under the JCOZ, the required parking would be 2,375 spaces.

Parking demand rates collected at other Southern California studio campus projects were applied in order to compare parking demand patterns to the proposed supply. In addition, the Urban Land Institute (ULI) Shared Parking model was applied to the Project. The results of both these analyses indicate that the provided parking supply of 2,684 spaces would exceed the Project's parking demand during peak filming season—2,162 spaces using the parking demand rates from the studio campus projects or 2,301 spaces using the ULI model. The Parking Analysis is included as Appendix B of the Transportation Assessment for the Shadowbox Studios Project.

Response to Comment No. O8-37

The comment asserts that considering the significance of the Project and the magnitude and nature of the Project trips, addition of a long-range conditions analysis is appropriate to evaluate the traffic conditions at full area buildout. The City does not require long-term intersection analyses to be performed on a project-level basis. The City's transportation model was used to analyze the opening year effects of the Project on the street system both without and with the Dockweiler Drive Extension Project, which comprises modifications to 12th Street, Arch Street, 13th Street, and Railroad Avenue. In addition, the traffic projections in the City's transportation model were factored in to include the

traffic attracted by the Dockweiler Drive Extension Project in order to fully reflect the Opening Year conditions evaluated in the Project Transportation Assessment.

Response to Comment No. O8-38

The comment claims that Caltrans should have been consulted or involved in the development of the scope and review of the traffic study. Caltrans submitted comments in response to the Notice of Preparation. Caltrans' comments were related to the use of VMT as the primary metric in identifying transportation impacts of all projects under CEQA, the use of the Caltrans Interim Local Development and Intergovernmental Review Safety Review Practitioners Guidance, consideration of Transportation Demand Management (TDM) strategies, bicycle or pedestrian connectivity improvements, the promotion of alternative transportation, and Caltrans permit requirements regarding transportation of equipment or materials to and from the Project Site. All of these comments were addressed in Section 4.14, Transportation, of the Draft EIR. In addition, the Project would be required to comply with any Caltrans permit requirements prior to construction.

More specifically, Caltrans methodology was followed to evaluate the effects of Project traffic on the freeways and freeway ramps serving the Project Site. As presented on pages 4.14-20 and 4.14-21 in Section 4.14, Transportation, of the Draft EIR, a freeway safety analysis was conducted based on the Caltrans Safety Guidance to identify potential safety impacts at freeway off-ramps as a result of increased traffic from the Project. The freeway safety analysis considered future Project conditions without and with the implementation of the Dockweiler Drive Extension Project. Under both conditions, the addition of Project traffic would result in less-than-significant impacts to Caltrans facilities and freeway safety.

Caltrans was also notified of the availability of the Draft EIR; however, no comments were received.

Response to Comment No. O8-39

The VMT threshold is the appropriate threshold for this analysis and was vetted by the City and the City's EIR consultant. Footnote [c] on Table 10 on page 50 of the Transportation Assessment (Appendix L of the Draft EIR) clearly explains that the 14.0 work VMT per employee is the appropriate CEQA threshold based on an interpolation between the 2020 threshold of 15.7 work VMT per employee and the 2040 threshold of 11.5 work VMT per employee (not 11.7 as described in the comment). The 15.7 and 11.5 thresholds include the 15-percent reduction from citywide average and do not need to be further reduced to account for the 15 percent.

Response to Comment No. O8-40

The comment correctly notes that the City's baseline home-based work VMT as 18.4 for year 2020 and 13.5 for year 2040. These represent the citywide averages for 2020 and 2040 prior to the 15-percent reduction to establish the VMT threshold identified in Response to Comment No. O8-39 above and used in the Project's VMT analysis.

Response to Comment No. O8-41

The comment correctly notes that the Level of Service time frames used in the Transportation Assessment as typical weekday from 7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM. but recommends that the analysis time frames be expanded to include school and church traffic. Please refer to Response to Comment No.O8-35 above.

The City's requirement for an employment project similar to the Project is to evaluate the Project's potential impacts during the weekday peak commuter hours. The Project peak trip generation coincides with the morning peak hours for schools and is low during the mid-afternoon peak hours for schools. Therefore, the peak impact on school traffic is already included in the Transportation Assessment as part of the morning peak hour analysis. In addition, the Project generates very little traffic on a Sunday morning and, therefore, is not likely to interfere with traffic to/from nearby religious institutions.

Response to Comment No. O8-42

The comment claims that the main access on 13th Street did not account for adequate storage capacity to keep vehicles from queuing outside the Project Site and onto public right-of-way. The inbound lanes to the Project at Gates 1 and 2 provide 2,100 linear feet of queuing space, which is more than double the typical storage length for projects of this type and size. The entry gates for Gates 1 and 2 off the intersection of 13th and Arch Streets have been set back well away from the public street intersection, and, as such, no queuing that would extend to the intersection is anticipated.

Response to Comment No. O8-43

The comment claims that the Draft EIR did not assume existing traffic signal timing data based on information provided by the City and Caltrans, and that because of that, the vehicular queues and level of service probably did not match existing field conditions. In the City of Santa Clarita, signal timing and phasing are obtained directly from the City's Department of Public Works' Traffic and Transportation Planning Division. Any adjustments to those settings to accommodate shifts in future traffic demand were discussed and approved by the City's Traffic Engineer prior the preparation of the Transportation Assessment.

Response to Comment No. O8-44

The comment claims that the Project trip distribution be revised to reflect a larger portion of Project trips at the freeways since the comment asserts that the majority of the trips should be coming from outside the City and from the greater Los Angeles and nearby areas. The Project trip distribution was reviewed and approved by City staff during the scoping process and is based on distribution for the Project area in the City's areawide transportation model. One of the purposes of the Project is to provide jobs closer to the workforce of a housing-rich area of the region, so it is not necessarily accurate to assume that the majority of Project employees would come from Los Angeles. There is also the adjacent Jan Heidt Newhall Metrolink Station, which can and will handle a portion of the employee demand from Los Angeles.

Response to Comment No. O8-45

The comment questions how the ramp queuing analysis prepared for the Project compared to the existing vehicular queues at the freeway ramps and if there are currently minimal queues present at the ramps during peak hours.

Ramp queuing analysis was done to determine if future conditions with the Project would cause traffic queues to exceed the capacity of the ramp. The analysis, based on the Highway Capacity Manual, showed that situation would not occur. The only location where the Project adds enough peak hour traffic to an off-ramp serving the Project Site to meet the threshold criteria is the SR-14 southbound off-ramp at Newhall Avenue, where the Project would add 38 morning and 30 afternoon peak hour trips to the ramp (see Table 11 on page 59 of the Transportation Assessment (Appendix L of the Draft

EIR)). Table 12 (page 60 of that same document) identified the additional queue lengths caused by the additional Project trips and showed that the Project would create an additional two feet of morning queue and three feet of afternoon queue. Accordingly, the analysis summarized in Table 12 showed that neither the Year 2028 queue without the Project nor the 2028 queue with the additional Project traffic would exceed the storage capacity of the ramp.

Response to Comment No. O8-46

The comment claims that the Draft EIR failed to provide the source and methodology for determining the Project trip distribution assumptions or any alternative or interim traffic or evacuation plans in the event the Dockweiler Drive Extension Project is not completed and suggests that the Project should not be built until the Dockweiler extension is completed.

Regarding trip distribution, please see Response to Comment No. O8-44 above. Project trip distributions were determined for both without and with the implementation of the Dockweiler Drive Extension Project scenarios and applied to the study area roadways.

In regard to the Dockweiler Drive Extension Project and lack of alternative or interim traffic plans, please see Response O8-5 above.

Table 18 on page 127 of the Transportation Assessment (Appendix L of the Draft EIR) shows the results of the intersection capacity calculations assuming that the Project is completed before the Dockweiler Drive Extension Project is built. The table shows that the intersection of 13th Street and Arch Street would have to be improved by the Project if it were to open before the Dockweiler Extension was completed. This improvement would extend westerly to Railroad Avenue.

The roadway improvements that would have to be implemented by the Project prior to obtaining a Certificate of Occupancy are discussed in Response to Comment No. O8-5. The Staff Report presented at the June 20 Planning Commission Meeting also presented these roadway improvements as Conditions of Approval for Commission consideration.

Response to Comment No. O8-47

The comment recommends the Transportation Assessment include an evaluation of the level of service operation at the Gate 3 access, as well as the 16 intersections listed in the comment.

As identified on page 2.0-21 in Section 2.0, Project Description, of the Draft EIR, Gate 3 would provide Project-related egress-only and be restricted to a right-turn movement onto 12th Street. As such, the only possible delays and backups would occur on private property, which would not affect the local transportation network. LOS for traffic on 12th Street would always be LOS A as there are no stops or opposing movements.

The study intersections included in the Transportation Assessment were selected by the City's Traffic Engineering staff as part of the Transportation Study scoping process. Page 37 of the City's TAU identifies the criterion for the selection of study intersections to be the "intersections where the proposed project would add 50 or more net new trips during the AM and PM peak hours should be included in the study."

Staff can add study intersections beyond these volume targets based on their knowledge of the Project's trip generation and trip distribution patterns, allowing them to select the locations most likely to be affected by the Project. Based on the above information, the City's Traffic Engineering

staff included any and all intersections that are likely to be affected by Project traffic. Intersections that were not considered either have sufficient remaining capacity or do not meet the 50-trip threshold and, thus, are not likely to be affected by the Project per the TAU thresholds.

The list provided in the comment suggests the study of seven additional freeway ramps, but City staff had already selected the five ramps most likely to serve the majority of the Project traffic. The additional ramps suggested are north of the I-5/Pico Canyon Road/Lyons Avenue ramp, where the analysis (shown in Tables 16 through 20) indicated that the Project would have no impact. Accordingly, Project traffic would be less likely to use these northerly interchanges than the ramps already studied, and any Project trips added are not anticipated to be more than the 19 Project trips added to the morning peak hour or the 15 Project trips added to the afternoon peak hour at the I-5 northbound off-ramp to Lyons Avenue.

Response to Comment No. O8-48

The comment claims that the existing traffic counts were obtained from older studies from 2017 and 2019 and that more recent traffic count data need to be utilized. The comment suggests that, alternatively, a sampling of newer counts be performed and compared to the data used in the study to ensure their validity.

New intersection traffic counts were not performed because the Transportation Assessment was conducted in the middle of the COVID pandemic, and data collection was not possible as traffic volumes would not have reflected pre-pandemic conditions.

Traffic counts have been conducted for other development projects in the City in Year 2023, and the results of these traffic counts indicate that current traffic volumes in Santa Clarita have yet to rise to pre-pandemic levels. Using pre-pandemic traffic counts and still applying a yearly growth factor through the pandemic years results in much higher traffic volumes for Existing Conditions than would occur if new counts were taken in 2022 or 2023.

Response to Comment No. O8-49

The comment questions how the 35 related projects were accounted for in the traffic projects and if the related projects' trips were manually assigned to the roadway network.

Please see Response to Comment No. O8-33 above. The related projects are included in the City's traffic model either as a specific project being proposed or the zoning code allowances for the related project site.

Response to Comment No. O8-50

The comment questions why some of the delays identified in Tables 16 and 17 of the Transportation Assessment appear to improve with the added trips from the Project without explanation or basis. The delay shown is average vehicle delay for every vehicle in every movement at the entire intersection. In situations where Project traffic is added to movements with a low delay time, it causes overall intersection average delay to decrease. For example, an intersection with an average delay of 15.0 seconds may have a through movement with an average delay of only 3.0 seconds. If vehicles were only added to the through movement, the overall intersection delay would decrease because vehicles are added vehicles with an average delay of 3.0 seconds, less than the intersection average of 15.0 seconds. Therefore, the average intersection delay would decrease below the pre-Project condition of 15.0 seconds.

Response to Comment No. O8-51

The comment suggests adding another column to Table 17 of the Transportation Assessment to identify the level of service impacts similar to Table 16. Accordingly, Table 17 on page 125 of the Transportation Assessment was revised as follows (see Section 3.0, Errata and Clarifications to the Draft EIR, of this Final EIR, for this revision):.

Table 17
EXISTING CONDITIONS WITH RAILROAD CROSSING UPGRADE (YEAR 2021)
INTERSECTION LEVELS OF SERVICE

No.	Intersection	Peak Hour	Existing Conditions		Existing with Project Conditions			
			Delay	LOS	Delay	LOS	∆ Delay	Impact
1.	Bouquet Canyon Road &	A.M.	48.2	D	48.8	D	0.6	No

Notes:
Intersections are signalized except as otherwise noted.
[a] Intersection is 2-way stop-controlled
[b] Future intersection to be constructed by the Project.
[c] Intersection would be constructed as part of the Dockweiler Extension.

Response to Comment No. O8-52

The comment questions what improvements would be required to achieve acceptable LOS at the intersection of Railroad Avenue and 13th Street if the railroad crossing upgrade is not implemented. The comment also claims that the Transportation Assessment failed to adequately address traffic congestion at the crossing or incidents causing undue delay.

Modifications to both the railroad crossing and the intersection of Railroad Avenue and 13th Street are part of the off-site improvements proposed by the Project and will be conditioned by the City as required for its Certificate of Occupancy. Delays at the intersection of 13th Street and Railroad Avenue due to train operations were included in the LOS analysis of this intersection. The number of trains per hour crossing 13th Street was estimated based on current train schedule and the and the amount of time per hour the crossing gates are lowered was subtracted from the time available to accommodate the traffic on 13th Street. Accordingly, the Transportation Assessment adequately addressed traffic congestion at the crossing, including delays due to train operations.

Response to Comment No. O8-53

The comment questions why some of the delays identified in Tables 18 and 19 of the Transportation Assessment appear to improve during future without Project conditions when compared to existing conditions. The comment also asserts that if the intersection capacity is the same as existing conditions and no improvements were implemented, with the additional traffic, the level of service and delay should generally get worse and not better.

Please refer to Response to Comment No. O8-50 above.

Response to Comment No. O8-54

The comment claims that no information on the methodology and software that was used for the roundabout analysis was provided. The comment acknowledged that a roundabout may not be suitable and appears to agree with the limitations of the roundabout during emergency evacuation conditions. The comment questions whether this limitation might also apply during typical operations due to the high traffic volumes.

The capacity calculation software used for roundabout analysis was the same software package as was used for all LOS analysis. The analysis was based on Synchro software for stop sign, signal, or roundabout intersections.

The Transportation Assessment is consistent with the above comment in that it points out that the roundabout would result in both operational and capacity concerns, particularly during evacuation conditions. These concerns are discussed in Appendices G and H of the Transportation Assessment (Appendix L of the Draft EIR).

Response to Comment No. O8-55

The comment claims that the Transportation Assessment did not include an analysis of future conditions without the Dockweiler Drive Extension Project. The comment recommends such analysis be conducted to determine the potential impacts of the Project without the roadway extension in place. The comment also asserts that since implementation of the Dockweiler extension depends on funding availability, it should be linked to the Project.

Contrary to the comment, the analysis of the Project traffic without the Dockweiler Extension in place is included in the Transportation Assessment and is shown in Table 18 on page 127 of the document (Appendix L of the Draft EIR).

As discussed in Response to Comment No. O8-25 above, the Project is not dependent on the Dockweiler Drive Extension Project. The Project would implement off-site improvements, including widening of 13th Street, Arch Street, and 12th Street and the signalization of the intersections of 13th Street and Arch Street and 12th Street and Arch Street, to provide additional roadway capacity and accommodate existing and future traffic volumes with the addition of Project traffic regardless of the completion of the Dockweiler Drive Extension Project.

Response to Comment No. O8-56

The comment claims there is no evidence that the level of service analysis for the intersection 13th Street and Railroad Avenue accounted for the railroad crossing and frequency and that the railroad crossing limits the capacity of the intersection and results in additional delay to impact the level of service and vehicular queues. Potential delays at the intersection of Railroad Avenue and 13th Street due to normal rail operations were included in the analysis. The capacity of the 13th Street lanes was adjusted by reducing the amount of time available to handle 13th Street traffic based on the amount of time per hour that the crossing gates would be down. Please also refer to Response to Comment No. O8-52 above.

Response to Comment No. O8-57

The comment claims that the Transportation Assessment failed to provide a figure showing the alignment of the Dockweiler Drive extension and how it connects to Placerita Canyon Road. It should be noted that the Dockweiler Drive Extension Project is not a part of the Project.

The City has produced many drawings showing the alignment of the Dockweiler Drive Extension Project. The requested connection to Placerita Canyon Road is shown in Figures 21 and 22 on pages 117 and 118 of the Transportation Assessment (Appendix L of the Draft EIR), as well as in the Tentative Tract Map included in Appendix B of the Draft EIR.

However, as mentioned in multiple responses above, the Project is not dependent on the Dockweiler Drive Extension Project. The Project would implement off-site improvements, including widening of 13th Street, Arch Street, and 12th Street and the signalization of the intersections of 13th Street and Arch Street and 12th Street and Arch Street, to provide additional roadway capacity and accommodate existing and future traffic volumes with the addition of Project traffic regardless of the completion of the Dockweiler Drive Extension Project. With regard to Placerita Canyon Road, if the Dockweiler Drive Extension Project is not implemented, the Project would be conditioned to extend Arch Street to Placerita Canyon Road and complete the two-legged intersection of Placerita Canyon Road and Arch Street, as indicated in the Tentative Tract Map included in Appendix B of the Draft EIR.

Response to Comment No. O8-58

The comment claims that the recommended prohibition of westbound U-turns at the intersection of Bouquet Canyon Road and Newhall Ranch Road negatively affects access to the existing land uses and Starbucks located at the southeastern corner of the intersection. The U-turn in question could be accommodated by turning right onto northbound Bouquet Canyon Road and making a

U-turn north of the intersection at Espuella Drive to be able to come back southbound, where a left-turn at the intersection would then allow a turn into the Starbucks parking lot.

Response to Comment No. O8-59

The comment questions whether the recommended addition of a fourth eastbound through lane at the intersection of Bouquet Canyon Road and Valencia Boulevard is feasible. This is the City's preferred improvement. The addition of a fourth eastbound through lane could be accomplished within the existing right-of-way by relocating the eastbound and westbound center medians slightly to the north and adjusting the lane widths of some of the through lanes.

Response to Comment No. O8-60

The comment questions whether the recommended improvement at the intersection of Sierra Highway and the SR-14 southbound ramps has been coordinated with Caltrans. The comment claims that improvements that would need to be reviewed and planned by Caltrans might take a long process to implement and asserts that the improvement might not get built or at least not built for a number of years, which affects the traffic analysis and reinforces the need for the Project to be linked to the construction improvements.

The proposed modifications to eliminate the median and provide an additional southbound left-turn lane at the intersection of Sierra Highway and the SR-14 southbound ramps have been studied and reviewed by Caltrans and the City, and a number of alternate configurations have been evaluated.

The intersection in question is projected to operate at Level of Service F in the afternoon peak hour in 2028 without the Project. The Project will contribute its fair share to the improvement of this intersection, and the City will work with Caltrans to get the improvement implemented.

Response to Comment No. O8-61

The comment questions whether the recommended improvement at the intersection of the SR-14 northbound ramps and Placerita Canyon Road has been coordinated with Caltrans. The comment claims that improvements that would need to be reviewed and planned by Caltrans might take a long process to implement and asserts that the improvement might not get built or at least not built for a number of years, which affects the traffic analysis and reinforces the need for the Project to be linked to the construction improvements.

Similar to the Response to Comment No. O8-60 above, modifications to the intersection of the SR-14 northbound ramps and Placerita Canyon Road have been the subject of numerous studies involving the City and Caltrans. If the Project is required to improve the intersection as a Condition of Approval, an improvement can be implemented.

The intersection in question is projected to operate at Level of Service E in the morning peak hour in 2028 without the Project. The Project will contribute its fair share to the improvement of this intersection and the City will work with Caltrans to get the improvement implemented.

Response to Comment No. O8-62

The comment claims that emergency evacuation routes need to be analyzed and provided and that a secondary/emergency access located on the west side of the Project Site is appropriate.

The comment also claims that the evacuation analysis appears to depend on and assume the Dockweiler Drive extension to be in place.

Secondary access to the west and north was investigated and determined to be unfeasible due to rail crossing issues, topography, and potential for neighborhood intrusion of Project trips. The evacuation analysis showed that the Project and all surrounding residents can be evacuated in a shorter time period with the Project and its roadway improvements than they could be under existing conditions. The evacuation analysis was performed both without and with the Dockweiler Drive Extension Project, and both with a roundabout and with a signal, and showed that the evacuation route involving 12th Street, Arch Street, and 13th Street would function better than existing conditions under all scenarios.

Please refer to Response to Comment No. O8-5 for an explanation of the Project's independent utility from the Dockweiler Drive Extension Project.

Response to Comment No. O8-63

The comment claims that Project traffic appears to be absorbed between Study Intersection Nos. 7 and 8. Figure 11 on page 89 of the Transportation Assessment (Appendix L of the Draft EIR) shows that 5 percent of Project traffic is absorbed between Study Intersection Nos. 7 and 8. There are numerous residential and commercial developments between Study Intersection Nos. 7 and 8 along Pine Street, Arch Street, and Race Street and to/from the businesses along Newhall Avenue itself. It is assumed that these developments would generate Project employees or induce travel to/from the commercial developments by employees.

Response to Comment No. O8-64

The comment questions whether it is valid to assume that more of the Project trips would be traveling through the City and local streets than traveling to and from the freeway considering that workers are mostly coming from outside of the City. The comment questions how the percentage of workers expected to live in the surrounding neighborhoods was calculated or what was the basis for the assumption. The comment asserts that a greater percentage of trips might need to be assigned to freeway ramps to more accurate access Project traffic and suggests that more traffic should be assigned to I-5 than SR-14.

Assuming the bulk of employees will come from outside of Santa Clarita and not use transit to reach the Project site is not accurate when considering the Project distribution based on the City's transportation model. The City's model, a subset of the SCAG regional model, was used in this traffic operational analysis in order to maintain consistency with the approved Dockweiler EIR. Both models investigated the distribution of residential and employment opportunities in the region and then used a gravity model to distribute those home-to-work trips to the Project Site.

In the case of the Project, the models calculated that approximately 50 percent of the employee commute trips would come from beyond the City limits and the other 50 percent from within Santa Clarita in 2028.

Figures 10 and 11 in the Transportation Assessment (Appendix L of the Draft EIR) show that 10 percent of the Project employees cross the Santa Clara River to the north while 40 percent enter or cross I-5 or SR-14. The majority of those use I-5 as suggested in the comment.

Response to Comment No. O8-65

The comment claims that a table showing the expected trip generation of the construction phase is lacking from the analysis of construction traffic. A discussion of the various construction phases and the accompanying number of trucks and the highest number of construction workers is included in the Transportation Assessment on pages 153 and 154 (Appendix L of the Draft EIR). The comment also calls for a passenger car equivalent (PCE) of 2.0 to be applied to the truck trips, but the Transportation Assessment showed that the average number of trucks in each of the three busiest phases of the construction sequence to be as follows:

Phase	Trucks per day
Hauling	7
Concrete Pour	15
Delivery	20

This level of truck trips does not warrant a separate numeric capacity evaluation, and, as such, a PCE of 2.0 would not change the results of such an evaluation.

Response to Comment No. O8-66

The comment claims that the parking analysis based the parking demand for the studio-related uses on light manufacturing use without providing an explanation as to why this was appropriate. The comment recommends the parking analysis be based on study of similar sites and studios.

Site-specific parking requirements were discussed with City staff, and the methodology shown in the study was approved by City staff. Table 1 of the Parking Analysis Form (included in Appendix B of the Transportation Assessment) categorized each land use component of the Project into the closest land use category in the City's UDC parking requirements so that a calculation of the UDC parking requirements could be developed. In completing the Parking Analysis Form, it became evident that the land use that had the closest parking code requirements to the actual parking demand patterns of the studio uses was the Light Manufacturing land use. Accordingly, UDC Code Section 17.44.101.11a was applied to those land uses within the Project.

As the comment suggests, the parking analysis was based on comparable studio parking demand rates derived from other Southern California studio campuses (NBCUniversal, CBS Television City, Paramount Pictures Studios). These rates and the total parking demand analysis using these empirical rates are shown on Table A-1 in the Parking Analysis Form.

Response to Comment No. O8-67

The comment questions the parking analysis conducted for the Project. The use of the shared parking model is an appropriate tool for the analysis of the parking demand for this Project. As described in the Parking Analysis Form, the shared parking analysis was conducted to confirm the Code analysis summarized in Table 1 of the Parking Analysis Form. The shared parking model was simply used as a tool to keep track of the parking demand patterns for each individual land use within the Project on an hour-by-hour basis throughout the day. This allowed the identification of the combined busiest hour of the day, which provides a good comparison to the adequacy of the overall Code requirements.

As shown in the summary of the shared parking demand (Exhibits B-1 through B-6 in Attachment B of the Parking Analysis Form [Appendix B of the Transportation Assessment]), there was no internal capture assumed for office, stage, stage support, or warehouse/storage land uses. Each of these land uses generated separate and distinct parking demand patterns, and no assumption was made regarding the sharing of parking between or among these land uses. Again, the parking demand for these individual land uses (both peak rates and time-of-day patterns) was based on empirical parking demand data from other Southern California studio campuses.

The only on-site land use that took "credit" for shared parking on-site was the food service category. The food service rate was reduced to only account for employee parking demand because the "customers" of the food service section would exclusively be employees of the studio, and those employees have been accounted for in the studio parking demand. The food service facilities are not open to the public and would not generate parking demand outside of the employees required to operate the service.

Response to Comment No. O8-68

The comment summarizes the scope of the Mr. Lewin's review and the existing conditions of the Placerita Canyon and Circle J communities that are in the vicinity of the Project. The comment does not address the adequacy of the Draft EIR. Accordingly, the comment is noted, and no further response is required.

Response to Comment No. O8-69

The comment states that Section 4.8, Hazards and Hazardous Materials, of the Draft EIR incorrectly concluded that Project impacts related to exposure of people or structures to significant risk of loss, injury, or death involving wildland fires would be less than significant without mitigation. The comment states that further analysis will determine that impacts on the surrounding communities would be significant and that mitigation measures are required, including the completion of the Dockweiler Drive Extension as part of the first phase of the Project.

As discussed in Response to Comment No. O8-25, an extensive evacuation modeling analysis was conducted that evaluated a worst-case wildfire or other emergency that would require the evacuation of the Placerita Canyon area, including homes, schools, and businesses. The analysis accounted for the existing population in the Placerita Canyon community and evaluated evacuation times both without and with the Project to determine the Project's impact during an evacuation event. The analysis also assumed that no evacuation would occur via Placerita Canyon Road or the future Dockweiler Drive connection. The Project, independent of the Dockweiler Drive Extension Project, would implement off-site improvements, including widening of 13th Street, Arch Street, and 12th Street and the signalization of the intersections of 13th Street and Arch Street and 12th Street and Arch Street; these improvements were taken into account to determine potential evacuation impacts on the Placerita Canyon Community. These improvements, which include a signalized intersection design at 12th Street and Arch Street, were determined to provide for the most efficient traffic operations under an evacuation scenario when compared with the roundabout or existing conditions. In addition, the signalized intersection design was determined to provide the horse trailers with additional roadway capacity and easier maneuverability through the corridor. Project improvements would facilitate evacuation and not create dead-end road situations within the communities as asserted in the comment.

Response to Comment No. O8-70

The comment is introductory and references fire behavior analysis conducted by a third-party. The comment claims that this study further corroborates, along with the fire behavior analysis contained in the Draft EIR, the significant threat that wildfires pose to the neighborhoods adjoining the Project. Fuel Modification Plan will be submitted to LACoFD for review and approval prior to issuance of building permits. The Fire Prevention Plan will be submitted with the Fuel Modification Plan.

It should be noted that the Project would change the existing conditions of the Project Site, as the entire Project Site would either be developed with impervious surfaces or managed landscape areas. As such, the risk of wildfire on the Project Site would be reduced through development of the proposed structures and improvements as compared with existing conditions. By converting the flammable landscape currently existing on the Project Site to a development featuring hardscapes, sound stages, support and ancillary buildings, and irrigated/managed landscaped areas, the Project would reduce fuel loads found on the Project Site and, thus, reduce the chances of a wildfire occurring or intensifying on-site and threatening surrounding properties.

Response to Comment No. O8-71

The comment provides a list of significant fires in the Santa Clarita Valley, references and quotes the fire history presented in the Draft EIR and in the Project's FPP, and provides articles and photos from past wildfires. However, the comment does not address the adequacy of the Draft EIR. Accordingly, the comment is noted, and no additional response is warranted.

Response to Comment No. O8-72

The comment accurately summarizes information presented in the Draft EIR and introduces results of a 3rd-party fire behavior analyst, which significantly conform with the Draft EIR's FPP fire behavior modeling results. The comment states differences between the Project's structures, which would be built to the latest ignition resistant requirements, and those of the surrounding community, which include buildings constructed before the ignition resistant requirements were codified. Lastly, the comment expresses the opinion that the existing communities would be further impacted during wildfires due to the additional Project population in the area. On the contrary, the FPP's modeling results showed that fire potential on the Project Site would be lower than existing conditions due to fire safety requirements, to which the Project would comply. The fire risk assessment of the Project area also determined that with "the conversion of the existing landscape to ignition-resistant development, wildfires may still encroach upon and drop embers on the site but would not be expected to burn through the site or produce sustainable spot fires due to the lack of available fuels." The fire risk assessment also concluded that the Project "would not facilitate wildfire spread and would reduce projected flame lengths to levels that would be manageable by firefighting resources for protecting the site's structure, especially given the ignition resistance of the structures and the planned ongoing maintenance of the entire site landscape."

The comment does not provide new information or substantial evidence to demonstrate that the impact analysis in the Draft EIR is inadequate for the reasons provided in Response to Comment No. O8-25. Therefore, this comment is noted for the administrative record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. O8-73

The comment acknowledged that the EIR correctly demonstrated that the evacuation of the Project Site itself will be adequately addressed, but the comment incorrectly assumes that the evacuation analysis showed inadequate evacuation conditions for the neighboring communities. Please refer to Response to Comment No. O8-25 for an in-depth discussion of the extensive evacuation modeling that focused surrounding on the evacuation of the Placerita Canyon neighborhood.

The comment argues that the neighborhood all the way to the Sierra Highway should be included in the evacuation shed analyzed by the Project. The boundaries of the evacuation shed focused specifically on the existing Placerita Canyon neighborhood that would evacuate through the intersection of 13th Street and Railroad Avenue. This comment is noted for the administrative record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. O8-74

The comment misinterprets the evacuation analysis to assume that the analysis includes the full use of the Dockweiler Drive Extension and states the Dockweiler Drive Extension should be required as the first phase of the Project. As described in the Response to Comment No. O8-25 above, the evacuation analysis assumed that the Project and the neighboring communities would not have access to the Dockweiler Drive Extension Project and would only evacuate through the intersection of 13th Street and Railroad Avenue.

The improved Dockweiler Corridor cited in the Traffic Evacuation Assessment refers to the stretch along the Project frontage, which comprises 12th Street, Arch Street, 13th Street, and Railroad Avenue, and not the Dockweiler Drive Extension Project. Accordingly, the comment incorrectly identifies the improvements that the Project would be required to implement. Evacuation times would be improved as a result of the off-site improvements proposed by the Project, including widening of 13th Street, Arch Street, and 12th Street and the signalization of the intersections of 13th Street and Arch Street and 12th Street and Arch Street, and independent of the Dockweiler Drive Extension Project.

The comment calls for an additional evacuation route; however, based on the evacuation analysis, the Project, with the roadway improvements described above and in Response to Comment No. O8-25, will reduce the existing evacuation time.

Response to Comment No. O8-75

The comment raises concerns over the impacts that pet and livestock evacuations may have on evacuation times. Although evacuation planning attempts to include the needs of pets and animals, the primary responsibility of public agencies is the protection of human life and prevention of loss or damage to property. Primary responsibility for evacuation of pets and animals ultimately rests with the owners of such animals.

While livestock evacuations may add time to an evacuation event, analysis of the potential delay would be speculative and dependent on the wildfire event, its spread rates, spread direction, and area evacuated. Regardless of the potential evacuation time delay, the road network improvements provided by the Project would improve the evacuation condition from its current condition. As discussed in Response to Comment No. O8-23 above, the Transportation Assessment evaluated in detail both the roundabout design and the signalized intersection design at 12th Street and Arch Street and determined that the 1-lane roundabout design would have less

capacity for evacuation operations than a traffic signal and would have geometric constraints that do not accommodate horse trailers as easily.

Response to Comment No. O8-76

The comment raises concern over fire department access to the Placerita Canyon community during an evacuation event. Fire Department access, as described in the comment, is an existing condition that is not exacerbated by the Project. Depending on the nature of the evacuation (e.g., short notice versus long notice events), law enforcement personnel managing the evacuation would determine the preferred approach for resident egress and firefighter ingress. Typically, evacuation traffic is designated such that one inbound lane is available for emergency response. There may be scenarios where multiple lanes are designated for evacuating vehicles and inbound fire apparatus may be considered unnecessary or lower priority than moving vehicles out of the area. These decisions are often field and situation specific and cannot be determined within a Project-level evacuation analysis. The evacuation analysis has determined that with the Project and its off-site improvements, including widening of 13th Street, Arch Street, and 12th Street and the signalization of the intersections of 13th Street and Arch Street and 12th Street and Arch Street, evacuations would be faster than they are currently.

The comment's concern is an existing condition that is not made worse by the Project and, therefore, does not result in the need for additional analysis or revisions to the Draft EIR conclusions that were found to be less than significant.

Response to Comment No. O8-77

The comment provides an opinion that the Project's off-site road improvements should be constructed/improved prior to the start of Project construction. It should be noted that the recommendation cited in the comment that "prior to bringing lumber or combustible materials onto the project site, improvements within the active development area shall be in place, including utilities, operable fire hydrants, an approved, temporary roadway surface, and fuel modification zones established" was incorrectly attributed to the L.A. County Fire. This was a recommendation in the Project's FPP and is included as Project Design Feature PDF-WF-2 in Section 4.17, Wildfire, of the Draft EIR. The comment further states that the established roads in the surrounding communities are inadequate and would be exacerbated by the "addition of the 2,400 employees of the Shadow Studio who will further add to emergency evacuation impacts to the egress routes during an emergency. Therefore, it would be an important mitigation that prior to construction of the Project, installation of the Dockweiler Extension be completed to significantly improve the evacuation rate of the neighboring communities." As described in the Response to Comment No. O8-76 above, the Project includes off-site improvements, including widening of 13th Street, Arch Street, and 12th Street and the signalization of the intersections of 13th Street and Arch Street and 12th Street and Arch Street, which would add more capacity to the roadway system that would facilitate evacuation of the adjacent Placerita Canyon neighborhood.

Response to Comment No. O8-78

The comment incorrectly suggests that the roundabout may provide better flow in an emergency evaluation situation than an unmanned traffic signal because the traffic could flow smoothly through the roundabout. It is likely that the traffic signal would be staffed by emergency personnel at the Arch Street and 12th Street intersection because of the critical nature of this location. If personnel were not available, the traffic signal would likely be turned to a flashing operation to facilitate exit

from Placerita Canyon. The design of the signalized operation would provide two westbound lanes at Arch Street as compared to the single-lane westbound approach under the roundabout design. The additional westbound capacity is the main reason for the exit time reduction under the traffic signal option. In addition, the large vehicles moving animals and horse trailers would have more difficulty maneuvering through the geometrics presented by the single-lane roundabout.

Response to Comment No. O8-79

The comment summarizes its opinions and statements from previous comments and provides a summary of the Draft EIR's impact thresholds that have been found to be less than significant. The comment further expresses confusion regarding the Dockweiler Extension Drive improvements and states that several significance determinations rely on the Dockweiler Drive Extension. The evacuation analysis presented in the Draft EIR (see Appendix H of the Transportation Assessment, which is included as Appendix L of the Draft EIR, and Appendix N of the Draft EIR) studied worst-case conditions by assuming that the Dockweiler Extension would not be constructed or would be closed south of 12th Street due to the emergency. The evacuation analysis clearly shows that the improved evacuation route along 12th Street, Arch Street, and 13th Street as a result of the Project's off-site improvements would provide sufficient capacity to accommodate the evacuation of both the Project and the neighboring communities without the completion of the Dockweiler Drive Extension. Please refer to Responses to Comment No O8-68 to O8-78 for detailed responses. This summary comment is noted for the administrative record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. O8-80

The comment reiterates that animal evacuations be considered as part of the evacuation modeling. Please refer to Response to Comment No. O8-75.

Response to Comment No. O8-81

The comment recommends a review of the determination of whether the Dockweiler Drive and 12th Street intersection could be more effective as a roundabout instead of a signalized intersection. This evaluation has already been completed and is presented in Appendices G and H of the Transportation Assessment, which is included as Appendix L of the Draft EIR. Appendix G provides a comparison of the operation of the roundabout versus the traffic signal while Appendix H provides a discussion of both designs under evacuation conditions. Pages 78 through 85 of the Transportation Assessment provide a summary of the performance of the two designs. The analyses concluded that the traffic signal design would operate more efficiently under peak hour traffic conditions and under evacuation conditions. Thus, the analysis of the performance of the two designs has already been completed and included in the Draft EIR.

Response to Comment No. O8-82

The comment presents the fire behavior analysis conducted by Mr. Tim Chavez. The analysis identified the factors that are considered in a fire behavior analysis, including topography (e.g., terrain, slopes), ground cover and fuels in the area, wind direction, wind speed, and fuel moisture. The comment identifies the scenario of most concern in the Project area involves a late season wind driven fire originating from the north and/or east of the Project Site. The comment identifies the flame lengths and rate of spread. However, the comment does not address the adequacy of the Draft EIR. Accordingly, the comment is noted, and no additional response is warranted.

Re: Newhall Studio Project 21-109 Request for an extension to review the EIR and DEIR initial comments
Please copy to all members of the Planning Commission

Dear Ms. Iverson and Planning Commission Members

SCOPE is a planning and conservation non-profit group now celebrating its 35th year of work in the Santa Clarita Valley.

These comments are timely filed on May 22nd; however, we continue to request additional time to comment (see below).

This project proposes to build a huge industrial development on an area of floodplain currently zoned for housing. It will fundamentally change the character of the Newhall neighborhood and old town district which the City has strived to create and which the City has spent enormous amounts of public funds to promote. It will destroy a number of oaks including several iconic and rare heritage oaks located in the middle of this flood plain which are older than the town of Newhall itself. It is also inconsistent with a number of existing Plans previously approved by the City as well as being inconsistent with several General Plan goals. Instead of providing mitigation measures for many significant impacts, the plan merely waves these away by pretending that impacts don't exist or providing narrative in the EIR with no corresponding mitigation measures to back up these assertions. **O9-1**

The EIR was released just prior to the Easter and Passover holidays when many people had their minds on family and religious celebrations and thus may not have been aware of its release. It is also a massive document requiring a great deal of reading and research.

Due to all of these factors and the importance of widespread community involvement on a project that will so dramatically change the character of an existing neighborhood and change an existing plan to no longer provide much needed housing, we continue to request that you extend the comment period to at least 120 days for this document.

It is vitally important that you receive input from a wide variety of community members on this project and that community members have adequate time to provide you with a full array of information to help you make the best decision for our community.

Overall Inadequacy of the DEIR.

O9-2

The purpose of an EIR is to inform the public and its responsible officials of the environmental consequences of decisions before they are made. (*Laurel Heights Improvement*

Assn. v. Regents of University of California (1993) 6 Cal.4th 1112, 1123, 26 Cal.Rptr.2d 231, 864 P.2d 502.)

This is a very large film studio project located next to a rural, equestrian zoned community. It is currently vacant land zoned for much needed housing in the form of a mixed-use development. The project will require a zone change, conditional use permit a permit for oak and hillside destruction, creek alteration permits, railroad crossing permits, etc. and will not comply with the circulation plan or traffic requirements until the very expensive, unfunded Dockweiler Extension is built. The current plan under approved zoning, would avoid much of these impacts and create a park area around the creek.

The Notice of Preparation for the new studio document lists many areas of concern and finds the majority of them as potentially significant (see Appendix A). The opening summary of the EIR also lists many areas of controversy including aesthetics, air quality, biological resources, hydrology and water quality, landuse, noise, public services, and transportation/traffic. Oddly though, this EIR for the most part (with the exception of biological, tribal and paleontological impacts) finds that there are no significant impacts and no mitigation requirements are needed. This is absurd on its face. A huge 24/7 industrial project that will require some 2500 parking spaces, massively increase the allowable building heights beyond current City Standards in an area that is currently vacant land will have a major impact on noise, light, aesthetics, traffic, GHG and air quality as well as other areas. **O9-2 Continued**

The purpose of an EIR is to inform the public and its responsible officials of the environmental consequences of decisions before they are made. (*Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal.4th 1112, 1123, 26 Cal.Rptr.2d 231, 864 P.2d 502.). To claim that such a large project has no impacts and that therefore no mitigation is required, allows the project proponent and the City, (should they approve this EIR) to avoid firm and enforceable mitigation requirements for our community. In failing to inform the public, as required by law, it deprives the public and decision makers of the assurance that proposed improvements will really come to pass.

General Plan Inconsistency

Our General Plan was updated in 2012. It did not include a large industrial project on this property, but instead the area is zoned for the much-needed housing. Thus, a general plan amendment is needed. Therefore, this project is not currently consistent with our General Plan. However, the document brazenly states multiple times that is consistent in all areas even though it will not be consistent until numerous permits to allow this inconsistency are granted. This constitutes a failure to disclose the real and major impacts of this proposal. **O9-3**

Inconsistency with the Circulation Plan. The Circulation Plan's most recent update, (the Dockweiler Extension which is fully approved and CEQA certified, but unfunded and unbuilt), must now be changed. The Dockweiler extension (completed in 2018 after negotiations with the community), must now be changed to eliminate key provisions of traffic calming measures such as the Roundabout and other measures. The Dockweiler Extension EIR allowed significant additional traffic through existing neighborhoods, with mitigation provided through these calming features. However, it was completed well before this project was ever proposed and did not include the large amount of additional traffic that will be generated with this proposal. We submit that these changes cannot be arbitrarily made without additional public review and input to the Dockweiler Extension project EIR. Thus, we believe that the statement made on ES-21 **"Threshold 4.14(e):** The Project would not conflict with an applicable plan, ordinance, or policy **O9-4**

establishing measures of effectiveness for the performance of the circulation system,…etc. is inaccurate on its face and must be corrected in the FEIR. Additionally, the Dockweiler Traffic analysis[1] does not correlate with the Traffic Assessment on which this industrial project is based. Which study is correct?

O9-4 Continued

Inconsistency with emergency planning required in the Circulation Plan - Fire Evacuation

o Objective C 2.5: Consider the needs for emergency access in transportation planning.

 Policy C 2.5.2: Ensure that new development is provided with adequate emergency and/or secondary access for purposes of evacuation and emergency response; require two points of ingress and egress for every subdivision or phase thereof, except as otherwise approved for small business subdivisions where physical constraints preclude a second access point.

Threshold 4.8(g): Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires.

This project is in a High Fire Hazard Severity Zone. The DEIR state that "An emergency could require partial or total evacuation of the Project Site and/or sheltering in place for some parts of the community. The City's existing emergency response system would be sufficient to address emergency evacuation scenarios in the event of natural or man-made incidents in the Project area that result in a need to evacuate some or all of the existing residents of the adjacent communities and future Project employees."[2] The City did not include this project in its Emergency Planning, since the project had not even been proposed then. ***The EIR must describe an evacuation plan for its employees and the existing adjacent residents.*** This is a deficiency.

O9-5

"The Project would utilize several exits in the event of evacuation, including the main entrance and two other access-controlled gates, one located immediately east of the main entrance at the eastern leg of the intersection of Arch Street and 13th Street, and one along 12th Street immediately east of the proposed gym building."[3] ***The EIR must describe how this will impede evacuation of adjacent residents.***

The EIR also depends on modifications to the Dockweiler Drive Extension Project which has not been built and completion of which is not a mitigation requirement for the project. It also d relies on instructions from the from local emergency management authorities instead of proposing an evacuation plan.

The project finds there will be not impact because it doesn't interfere with any emergency protocols, however it has not analyzed how everyone, including employees and neighbors would get out all at once in the event of a fast-moving wildfire. We assert wildfire is a significant impact requiring analysis and mitigation fir this project that adds 3000 employees at the entrance to a canyon neighborhood in a severe high fire hazard zone.

Inconsistency with the Beautification Master Plan

This Plan addresses concepts for streetscape design, landscape enhancement, gateways, and monumentation and signage, on both a regional and a community scale. The plan strives to maintain the identity of individual communities while unifying the entire City through design.

O9-6

The Proposed Project area is included within the Newhall community portion of the Beautification Master Plan area, which describes the Newhall community as one with roots in oil and gold extraction and western movie production, industries that strongly contribute to the community's identity. The Newhall area is also concerned about Oak Preservation as is indicated

[1] https://filecenter.santa-clarita.com/EIR/Dockweiler_2018/Appendix%20B_Addendum%20Traffic%20Impact%20Study.pdf The Dockweiler Extension documents are hereby incorporated by refence in their entirety as refence s for our comments

[2] DEIR, p. 4.8-13

[3] *Ibid.*

by the two special standard districts located within the Newhall area that include oak tree preservation in their regulations. The Beautification Master Plan identifies Railroad Avenue (identified in the plan as San Fernando Road) as a first priority primary corridor and recommends beautification treatments, such as landscaping. Additionally, the Project Site is adjacent to the Old Town Newhall area, which generally extends where the City has spent extensive public funds to create a pedestrian friendly multi-use "old Town mixed use shopping district. Originally settled in 1878, Old Town Newhall is characterized by its "old town" atmosphere, with a compact and walkable character and emphasis as an arts and entertainment district Siting this massive industrial project with building heights that exceed general plan limits and a huge wall that will face Railroad Avenue will not enhance the area and may depreciate the value of the Old Town Newhall properties.

O9-6
Continued

This Plan is inconsistent with the Open Space and Conservation Element of the General Plan and has significant impacts to aesthetics. The combined Conservation and Open Space Element establishes a policy framework for the designation and long-term preservation of open space within the planning area and addresses community benefits derived from open space, such as providing land for park and recreational facilities, habitat preservation, scenic views, and water recharge and watershed protection. The Conservation and Open Space Element states that rivers and streams located within the valley's canyons "provide scenic visual relief from urbanization". Placerita Creek transects the northern portion of the Project Site, and is a tributary to the south fork of the Santa Clara River. It's floodplain also provides ground water recharge and a wildlife corridor for animals to access the Santa Clara River, and a major wildlife connection between the San Gabriel, Santa Susana And San Padres mountain ranges which the DEIR failed to discuss and to mitigate impacts on it.[4]

O9-7

. Instead of preserving and enhancing the creek as proposed for the Alternative 2 housing project, no one will be able to even see the creek and its Northern floodplain will be turned into a parking

[4] Mitigation must include setbacks, riparian re—vegetation for cover, light glare reduction, and any other mitigation that the Fish and Wildlife Dept. would suggest.

lot. This is not consistent with the Open Space element or the Placerita Canyon Special Standard District.

Scenic resources on the Project Site include a prominent ridgeline, which runs along the northeastern portion and boundary of the Project Site and Placerita Creek and its floodplain area that traverses the Project Site. The ridgeline, which is considered a "significant ridgeline" in the Conservation and Open Space Element, rises to a height of approximately 1,343 feet above mean sea level at its northern tip and 1,320 feet above mean sea level at the point where the ridgeline intersects the eastern boundary of the Project Site. This ridgeline is approximately 80 to 110 feet above the flat, central portion of the Project Site and surrounding areas, and slopes downward to the southwest toward Placerita Creek and the creek wash area, which ranges between 70 and 170 feet wide. The project will impact this ridge line which is not consistent with the Open Space and Conservation element. It is incorrect to state that the project is consistent with this element when major impacts to it will occur.

O9-7 Continued

Threshold 4.1(a): Would the project have a substantial adverse effect on a scenic vista?
The answer is yes, despite the EIR claiming consistency and no impact. Visuals provided in the EIR on figures 4.1-4 and others, including the cover of the EIR make it obvious that the ridgeline and creek will no longer be visible to the public. This is a significant impact, not consistent with the general plan, and must be addressed.

Traffic

As previously stated, the Dockweiler extension is not built. It must include an expensive bridge over the railroad tracks because the PUC would not grant a permit for an at grade crossing. The EIR traffic analysis bizarrely analyses the impacts of this project as though this extension and other upgrades are already completed, and thus finds that NO mitigation measures are required. In fact, the project transportation plan will be a significant impact unless and until the Dockweiler Extension is completed, but this fact is not disclosed to the decisionmakers or the public in the DEIR. Instead they are told that there will be no impacts and no mitigation is required.

Thus, a mitigation measure ensuring the completion of this extension prior to the start of the project must be required.

O9-8

Additionally, there is a potential for traffic stacking at the 13th St. entrance that may potentially back up across the rail road tracks. Again, we express our concern that the PUC did not weigh in on the NOP and may not even have been advised of this project that could affect their railroad crossing. Although this EIR states that minor railroad crossing improvements will be made (page 2.0-22), it doesn't analyze the stacking problem, and whether these improvements would reduce the impacts and danger to **vehicles** and railroad passengers at this entrance, AND they are not listed as mitigation measures. We do not believe that the increased traffic from this project has been disclosed to the PUC, whether a permit for all this additional traffic crossing the tracks has been obtained from the PUC or whether the PUC was even notified of this project and the potential issues with the railroad crossing. It is our understanding that any changes made to a railroad crossing will have to receive PUC approval. This issue was brought up at during the NOP comment period but the proponent has failed to include it in the EIR. This is a public health and safety issue and should have been disclosed and analyzed in the EIR.

Greenhouse Gases and Climate Change

The EIR fails to acknowledge or discuss the City's 2012 Climate Action Plan that requires returning to a baseline 0f 2006 emissions.

O9-9

The EIR makes a cursory opening description of rising GHG impacts but fails to substantially discuss wildfire, an impact which relates to this project and its evacuation plan. Wildfire risk in California will increase as a result of climate change. Earlier snowmelt, higher temperatures and longer dry periods over a longer fire season would directly increase wildfire risk. Indirectly, wildfire risk will also be influenced by potential climate-related changes in vegetation and ignition potential from lightning. However, human activities will continue to be the biggest factor in ignition risk. It is estimated that the long-term increase in fire occurrence associated with a higher emissions scenario is substantial, with increases in the number of large fires statewide ranging from 58% to 128% above historical levels by 2085. Under the same emissions scenario, estimated burned area will increase by 57% to 169%, depending on location (CCCC 2012). Wildfire information should have been included as a GHG impact since it is relevant to other areas of the EIR.

Mature oaks, especially heritage trees have sequestered large amounts of carbon. The carbon produced from removing those 7 heritage oaks and others should be included in GHG construction generation figures, in case they are permitted to be removed as requested.

Again, even though the project will produce a substantial amount of GHG by means of the numerous trucks and other heavy vehicles that will be used on the site as described in the GHG generation tables and parking spaces for some 2500 cars, the DEIR states that no mitigation requirements are needed. This project will increase both GHG and air pollution, but no mitigation measures are included because the EIR found there were no impacts, apparently because there are no defined threshold limits? Again, this is beyond absurd.

O9-9 Continued

Instead, “design features” such as solar roofs and electric plug in recharge stations are listed. While these are laudable, they should be required mitigation measures. A “design feature” is not a mitigation measure. Since it is not enforceable and can be changed by any future Council or just not enforced, the public cannot rely on a “design feature” to mitigate an impact.

Further, specificity in the mitigation measures must be required, such as square feet of roof top solar, energy generated and number of charging stations. The plan also seems to rely on existing public transportation rather than encouraging company related strategies in a plan of its own (such as bike to work and carpooling or van pools). However, nothing is required.

Some strategies that could be incorporated into mitigation requirements to reduce VMT for this project are:

- Offer employees financial incentives to carpool, use public transportation, or use other modes of travel for daily commutes.
- Require the development of commute trip reduction plans that encourage employees who commute alone to consider alternative transportation modes.
- Develop shuttle systems around business district parking garages to reduce congestion and create shorter commutes.
- Create an online ridesharing program that matches potential carpoolers immediately through email

Significant Impact to Light and Glare not mitigated

O9-10

While the EIR admits to understanding both the light requirements of the Placerita Special Standards District and the City lighting ordinance, it goes on to describe architectural lighting elements that clearly don’t abide by either of these standards.

‘The Placerita Canyon Special Standards District (SCMC Section 17.39.020) and the City of Santa Clarita’s outdoor lighting standards (SCMC Section 17.51.050, Outdoor

Lighting Standards) require all lights to be directed downward and be shielded so as to avoid off-site glare. The Project would install light fixtures with site-specific features to reduce glare, while maintaining a safe environment for pedestrians and vehicle traffic and a "dark sky" environment. Exterior fixtures would not be "drop lens" type fixtures or exposed source lighting fixtures. Pole lighting and building-mounted lighting fixtures would consist of cut-off fixtures with minimal light spillage to immediately adjacent areas within the Project Site and no light spillage beyond the boundaries of the Project Site."

Threshold of Significance 4.1(d): Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

On a property that currently has no development, this project will unavoidably significantly impact the light and glare and affect the night sky and create glare to adjacent residences. in contradiction to part A.4 of the City lighting ordinance. [5]

While the DEIR states that it will not use some of the specifically prohibited light fixtures, it makes no commitments in for form of mitigation measures regarding the most important City admonition – that all fixtures must be directed downward and no light spillage will occur into adjacent neighbor hoods. [6] I.e., This paragraph does not guarantee that all lights will be directed downward or that light trespass won't occur because no conditions or mitigation measures were incorporated to ensure this outcome. The EIR merely waves away this significant impact with a magic wand. One cannot mitigate a significant impact by merely stating in the body of the EIR that it won't exist.

O9-10
Continued

Bio Resources

Section 17.51.040 Oak Tree Preservation

SCMC Section 17.51.040 states that the beauty of natural areas within the Santa Clarita Valley is enhanced by the presence of large numbers of native oak trees. The preservation ordinance outlined in SCMC Section 17.51.040 "contributes to the welfare and aesthetics of the community and retains the great historical and environmental value of these trees." Further, 17.51.040 states that these oak trees "lend beauty and charm to the landscape, enhance the value of property, and preserve the character of the communities in which they exist."

This project will destroy 7 heritage oaks, older than the town of Newall without even the attempt to incorporate them into the project plan, along with almost all other oaks on the project site, which is inconsistent with our oak preservation ordinance. Including them would not only provide consistency with the General Plan Open space element, but also contribute to needed support in the community for this extremely impactful project. While the City may want your tax dollars, the community would prefer to have our oaks. You can address both issues by incorporating the heritage oaks into your project, thus complying with the oak ordinance by preserving them.

O9-11

The Oak Ordinance was the first ordinance passed by the City after its incorporation in 1987. We have an oak on the City Seal. Yet developers routinely propose to destroy all our oaks. It is time for the City to say no to oak destruction, since it does not comply with our general plan. If

[5] From City Code lighting standards - "Reduce light pollution and preserve the nighttime environment."

[6] From City Code lighting standards - General Requirements a. Shielding. All lighting shall be directed downward and be of a cut-off design so the luminary and/or lens do not protrude below the luminary housing and is not visible from a public right-of-way. b. Light Trespass. Lighting may not illuminate other properties and shall be directed downward to prevent off-site glare.

the City supports this plan, they should support Alternative 3 and preserve additional oaks as well as a set back from the creek.

Also please see above regarding the failure to discuss the impacts proposed to Placerita Creek on the wildlife corridor. This issue needs to be disclosed and discussed in the EIR. O9-11 Continued

Noise Impacts

Since the EIR states there will be no impacts despite the fact that the project is sited on vacant land where there currently is no noise generation except for very occasional vehicular parking for an event, we fell it is important to remind you that your failure to disclose noise impacts and address them now, could result in future lawsuits. You may therefore want to fully disclose traffic and other noise an provide mitigation for those affected now instead of facing lawsuits later. We therefore provide below the state codes on noise:

California Health and Safety Code 46000

The Legislature hereby finds and declares that:

(a) Excessive noise is a serious hazard to the public health and welfare. (b) Exposure to certain levels of noise can result in physiological, psychological, and economic damage. (c) There is a continuous and increasing bombardment of noise in the urban, suburban, and rural areas. O9-12

(d) Government has not taken the steps necessary to provide for the control, abatement, and prevention of unwanted and hazardous noise.

(e) The State of California has a responsibility to protect the health and welfare of its citizens by the control, prevention, and abatement of noise.

(f) All Californians are entitled to a peaceful and quiet environment without the intrusion of noise which may be hazardous to their health or welfare.

(g) It is the policy of the state to provide an environment for all Californians free from noise that jeopardizes their health or welfare. To that end it is the purpose of this division to establish a means for effective coordination of state activities in noise control and to take such action as will be necessary to achieve the purposes of this section.

(Added by Stats. 1975, Ch. 957.)

This facility will produce noise levels far exceeding the level of the now vacant lot. Yet you have refused to acknowledge and address these serious impacts in the EIR. This is an EIR deficiency. You need to disclose these impacts and mitigate the noise to the surrounding neighborhood.

Conclusion

The willingness of the City to consider up ending its many laudable ordinances and general plan requirements for this project is distressing. The conclusion that most of the potential impacts don't even require mitigation is baffling for a project of this size located in a residential neighborhood of a character that, at least in theory, the City has taken great pains to protect over the years. The project could work here, but not on the scale proposed and not without some real mitigation measures proposed to protect our community. We prefer and have previously supported the original zoning on this site, which is alternative 2. If you must have this project, please vote for the reduced size, preferred environmental alternative 3 and include setbacks to the creek and inclusion of some of the heritage oaks into the project. Please don't destroy the beauty of our community and ignore our general plan for increased tax dollars that with all the credits for movie production, may not even be there. We did not have adequate time to complete our full evaluation of this project, including biological resources. We will be submitting O9-13

additional comments in that area. Although you are not required to respond to them, we remind both you and the City, that you are still required to consider them. O9-13 Continued

Thank you for your careful evaluation of this matter.

Sincerely,

Lynne Plambeck,
President

Letter No. O9
Lynne Plambeck, President
Santa Clarita Organization for Planning and the Environment
P.O. Box 1182
Santa Clarita, CA 91386

Response to Comment No. O9-1

The comment provides an introduction to the Santa Clarita Valley Organization of Planning and Environment (SCOPE). The comment asserts that the Project proposes to build a huge industrial development on an area of floodplain currently zoned for housing. It should be noted that the majority of the Project Site is zoned MXN (Mixed Use Neighborhood), and only the area north and a small area south of Placerita Creek are zoned NU5 (Non-Urban 5, one dwelling unit per acre). The Project is permitted in the MXN zone with approval of a Conditional Use Permit (CUP).

The comment also asserts that the Project will fundamentally change the character of the Newhall neighborhood and old town district. While the Project Site is also located within the Placerita Canyon Special Standards District (PCSSD), there is nothing in the PCSSD that would preclude the Project Site from operating as a studio. The PCSSD does not regulate the types of uses allowed on a property. A studio use can be permitted within the PCSSD. As described in Section 2.0, Project Description, of the Draft EIR, the proposed buildings have been designed to be consistent with the Old Town Newhall Specific Plan standards, including its development standards and architectural style standards. In addition, as discussed in Section 4.10, Land Use and Planning, of the Draft EIR, the Project would implement the following components in accordance with the provisions of the PCSSD:

- The Project would be internally and externally pedestrian-oriented with bicycle amenities and accommodations. The Project would construct a Class I trail along the Project frontage at 12th Street, Arch Street, and 13th Street and would be conditioned to either (1) pay an in-lieu fee to contribute toward improvements or (2) construct a connection to a future Class I trail along Railroad Avenue and future connection to the Jan Heidt Newhall Metrolink Station and various retail, commercial, and entertainment uses in Old Town Newhall to promote a pedestrian friendly environment.
- The Project would include a defined entry gateway with landscaping and architectural elements with signage.
- The Project would utilize the MWD right-of-way behind the residences that front on Alderbrook Drive as a plant nursery, which would provide a transition between the residential uses immediately east of the Project Site and the Project.
- The majority of the Project's landscaping would use drought-tolerant trees.
- The proposed buildings would provide 360-degree architectural design with pedestrian-scaled building massing and forms.
- The Project would develop buildings with varied heights, ranging from 18 feet for the catering buildings to 55 feet for the sound stages, as permitted upon extension of the boundaries of the Jobs Creation Overlay Zone to incorporate the entire Project Site.

Furthermore, the Project would be required to undergo several City processes prior to Project approval, including architectural design review, development review, landscape plan review, and

hillside review, to ensure that the Project complies with the requirements of the PCSSD and is compatible with the surrounding area, particularly the residential uses immediately east of the Project Site in Placerita Canyon.

The comment also states that the Project will destroy a number of oaks, including several iconic and rare heritage oaks located in the middle of the flood plain that are older than the town of Newhall itself. According to the Protected Oak Tree Report prepared for the Project (included in Appendix D of the Draft EIR), of the seven heritage oaks that would be removed, the condition of five was rated C- or D.[38] The Project would replace the 13 oak trees to be removed trees with 211 oak trees, including coast live oak, Engelmann oak, valley oak, and southern live oak.

The comment claims that the Project is inconsistent with a number of existing Plans previously approved by the City, as well as being inconsistent with several General Plan goals. The Project's consistency with land use plans, including, but not limited to, the City's General Plan, Old Town Newhall Specific Plan standards, and the provisions of the PCSSD, have been adequately addressed throughout the Draft EIR, including in Section 4.7, Greenhouse Gas Emissions, Section 4.10, Land Use and Planning, and Section 4.14, Transportation. The comment does not provide specific information or substantial evidence to demonstrate the Project's inconsistency with relevant plans.

The comment also claims that instead of providing mitigation measures for many significant impacts, the Project merely waives the mitigation by pretending that impacts do not exist. CEQA only requires mitigation measures if substantial evidence exists of potentially significant environmental impacts. In particular, CEQA Guidelines Section 15126.4(a)(4)(A) states that there must be an essential nexus between the mitigation and a legitimate government interest (i.e., potential significant impact). The Draft EIR fully complied with all of CEQA's mandates, and the comment presents no information or substantial evidence where significant impacts are claimed and no mitigation measures provided.

The comment also requests an extension of the 45-day public review of the Draft EIR by at least 120 days. The City has provided the following public review periods and opportunities for public input during the Shadowbox Studios EIR process:

- Publication and distribution of a Notice of Preparation (NOP) on March 28, 2022, notifying interested agencies, organizations, and persons that the City would be preparing an EIR for the Project and inviting comments on the scope and content of the EIR. The public review period for the NOP was from March 29, 2022, to April 28, 2022.
- Public scoping meeting held on April 21, 2022, at which the City accepted comments on the scope and content of the EIR.
- Publication and distribution of a Notice of Completion and a Notice of Availability of the Draft EIR on April 6, 2023, which notified interested agencies, organization, and persons

[38] According to the Protected Tree Report prepared for the Project (included in Appendix D of the Draft EIR), a rating of C indicates average condition; however, although healthy in overall appearance, there exists an abnormal amount of stress, pest infestation, or visual signs of minor structural problems. A rating of D indicates below average/poor condition; the tree is characterized by exhibiting a great degree of stress, pest, or diseases and appears to be in a rapid state of decline. The degree of decline can vary greatly and may include dieback or advanced stages of pests or diseases. There may also be visual signs of structural problems such as cavities, decay or damaged roots.

that the City was accepting comments on the Draft EIR. The public review period for the Draft EIR began on April 6, 2023, and ended on May 22, 2023.

- Three Planning Commission meetings held on April 18, 2023, May 16, 2023, and June 20, 2023, to solicit comments from the public and the Planning Commission on the Draft EIR.

The public review process undertaken by the City for the Draft EIR fully complies with all requirements of CEQA and the CEQA Guidelines. Given the above, and based on direction provided by the City's Planning Commission, the Draft EIR review period was not extended.

Response to Comment No. O9-2

The comment briefly describes the Project and the approvals being sought by the applicant and states that the Project will not comply with the circulation plan or traffic requirements until the Dockweiler Drive Extension Project is built. However, the Project is not dependent on the Dockweiler Drive Extension Project. The Project would implement off-site improvements, including widening of 13th Street, Arch Street, and 12th Street and the signalization of the intersections of 13th Street and Arch Street and 12th Street and Arch Street, to provide additional roadway capacity and accommodate existing and future traffic volumes with the addition of Project traffic regardless of the completion of the Dockweiler Drive Extension Project.

The comment also claims that the current plan under the approved zoning would avoid much of the Project's impacts and create a park area around Placerita Creek. Contrary to the comment's claim, as presented in Section 5.0, Alternatives, of the Draft EIR, although Alternative 2, which represents development consistent with the existing zoning of the Project Site, would result in lesser impacts related to biological resources, cultural resources, geology and soils, and tribal cultural resources, it would result in greater impacts related to air quality, energy, GHG emissions, hazards and hazardous materials (regarding wildfire), noise, population and housing, public services, transportation, utilities and service systems, and wildfire.

In addition, the comment asserts that the NOP listed many areas of concern and found the majority of them as potentially significant and that the opening summary of the Draft EIR listed many areas of controversy but that despite of this, the Draft EIR found that there were no significant impacts or mitigation measures needed. It should be noted that the areas of concern listed in the NOP were based on the Initial Study prepared for the Project. One of the purposes of an Initial Study is to assist in the preparation of an EIR by focusing the EIR on those effects that the Initial Study determined to be potentially significant. In addition, as described in the Executive Summary of the Draft EIR, potential areas of controversy may include those environmental issue areas where the potential for a significant unavoidable impact has been identified. However, as identified in the Draft EIR, after the analyses of those effects that the Initial Study determined to be potentially significant, all impacts associated with the Project would be less than significant or less than significant with mitigation incorporated.

The last part of the comment claims that the Draft EIR failed to inform the public and decision-makers of the environmental consequences of decisions before they are made. The Draft EIR fully complied with all of CEQA's mandates, and the comment presents no information or substantial evidence where significant impacts are claimed and no mitigation measures provided.

Response to Comment No. O9-3

The comment states that the 2012 General Plan update did not include a large industrial project on the Project Site but that the area is zoned for much-needed housing. As discussed in Response to Comment No. O9-1 above, the majority of the Project Site is zoned MXN (Mixed Use Neighborhood), and only the area north and a small area south of Placerita Creek are zoned NU5 (Non-Urban 5, one dwelling unit per acre). The Project is permitted in the MXN zone with approval of a Conditional Use Permit (CUP).

In addition, as explained in Section 4.10, Land Use and Planning, of the Draft EIR, under State Planning and Zoning law (Government Code Section 65000 et seq.), strict conformity with all aspects of a plan is not required. As discussed in the State of California General Plan Guidelines, a proposed project should be considered consistent with a general plan or elements of a general plan if, considering all its aspects, it will further the objectives and policies of the general plan and will not inhibit their attainment.

At a regional level, the Project Site is located within a SCAG-designated High Quality Transit Area (HQTA) and a Transit Priority Area (TPA), both of which are considered Priority Growth Areas within 0.5 mile of an existing or planned transit stop that encourage transit-oriented developments (TODs). SCAG defines TOD as a "planning strategy that explicitly links land-use and transportation by focusing mixed housing, employment, and commercial growth around bus and rail stations (usually within ½ mile). TODs can reduce the number and length of vehicle trips by encouraging more bicycle/pedestrian and transit use and can support transit investments by creating the density around station to boost ridership."[39]

Accordingly, the Draft EIR adequately analyzed the Project's consistency with applicable plans and policies, particularly the City's General Plan.

Response to Comment No. O9-4

The Transportation Assessment (Appendix L of the Draft EIR) analyzed the impacts of the Project both without and with the Dockweiler Drive Extension Project in place and identified interim improvements that would be necessary to allow the Project to open prior to the completion of the Dockweiler Drive Extension Project.

The Project Transportation Analysis was based on the Dockweiler Drive Extension EIR, and the future traffic volumes projected for the area are all based on the traffic model used to develop the analysis for the Dockweiler Drive Extension Project. The residential project previously proposed for the Project Site included in the Dockweiler analysis was removed from the model and replaced with the Shadowbox Project. Therefore, it is unclear what is meant by the comment, "Additionally, the Dockweiler Traffic analysis does not correlate with the Traffic Assessment on which this industrial project is based. Which study is correct?"

The Project analysis does correlate with the Dockweiler analysis, and both studies are correct. They approved Dockweiler Drive Extension EIR studied a separate project, which is the extension of Dockweiler Drive from its current terminus at Valle del Oro to Railroad Avenue, specifically the

[39] Southern California Association of Governments, Connect SoCal: The 2020-2045 Regional transportation Plan/Sustainable Communities Strategy of the Southern California Association of Governments, adopted September 3, 2020, 176.

alignment for the Dockweiler Drive extension. The Dockweiler Drive Extension EIR analyzed multiple conceptual intersection designs; however, it did not provide specificity or commitment to a particular design for the roadway.

Appropriately, the Project's Transportation Assessment contains detailed operational evaluations of the intersection of 12th Street/Dockweiler Drive/Arch Street configured as a roundabout and as a traditional signalized, four-legged intersection in order to determine what, if any, roadway improvements would be necessitated by the Project. The analysis finds that the signalized intersection offers safety advantages for the existing residents under evacuation conditions.

Response to Comment No. O9-5

The comment cites Objective C 2.5 and Policy C 2.5.2 in the City's Circulation Plan and CEQA threshold 4.8(g) in the Draft EIR. The comment states that the Draft EIR's fire and evacuation analysis is deficient because it did not describe an evacuation plan for Project employees and adjacent existing residents or discuss how the evacuation of the Project would impede the evacuation of adjacent residents. The comment also claims that the Project is dependent on the modifications proposed by the Dockweiler Drive Extension Project and that it relies on instructions from local emergency management authorities instead of proposing an evacuation plan. Further, the comment asserts that wildfire is a significant impact that has not been adequately analyzed in the Draft EIR and that the impact would require mitigation because the Project is in a VHFHSZ and would add 3,000 employees.

As discussed in Response to Comment No. O8-25, the Draft EIR included an FPP that evaluated the Project's potential to ignite new fires and an extensive evacuation modeling analysis that accounted for Project employees and existing adjacent residents (see Appendix N of the Draft EIR). The FPP concluded that the Project would provide a defensible space and that the Project would not contribute to increased fire risk to the surrounding community. The evacuation analysis described a worst-case evacuation scenario where all evacuees would leave the Project area through the intersection of Railroad Avenue and 13th Street to the west. As concluded in the evacuation analysis, the Project would reduce the evacuation congestion period compared to existing conditions. Moreover, as explained in Response to Comment Nos. O8-25, O8-73, and O8-74, the Project does not rely on the completion of the Dockweiler Drive Extension Project. Further analysis of the Project's wildfire and evacuation-related impacts are also provided in Section 4.17, Wildfire, of the Draft EIR. As such, the Draft EIR describes an evacuation plan that included the Project employees, as well as adjacent residents, and adequately analyzes Project impacts related to wildfire and evacuation. Based on substantial evidence, the Draft EIR concluded that impacts would be less than significant.

Response to Comment No. O9-6

The comment identifies the Project Site to be located within the Newhall community portion of the City's Beautification Master Plan area and adjacent to the Old Town Newhall area. The comment claims that the Project, with building heights that exceed general plan limits and a huge wall that will face Railroad Avenue, will not enhance the area and may depreciate the value of the Old Town Newhall properties. However, the comment does not provide substantial evidence to support this claim. On the contrary, the first page of the Newhall Community Design Guidelines of the City's Beautification Master Plan describes the film industry as one of the strong roots that is still very important to the residents of Newhall. As described in Section 2.0, Project Description,

of the Draft EIR, the campus would feature various design elements that commemorate the filmmaking heritage of Santa Clarita, including a mural featuring film stars, such as Charlie Chaplin, Gene Autry, and William S. Hart, among others, from Santa Clarita Valley's past. In addition, the proposed buildings have been designed to be consistent with the Old Town Newhall Specific Plan standards, including its development standards and architectural style standards. As an example, the main street commercial architectural type, identified in the Old Town Newhall Specific Plan, would be used on the support building façade along Railroad Avenue to integrate with and maintain the community character of Old Town Newhall while also providing the necessary acoustical buffer from the railroad noise to the sound stages. The design of the Project's gateway and ancillary buildings conveys some characteristics of craftsman style architecture with low-pitched roofs and overhang that rest on decorative stone columns similar to those found at the Old Town Newhall Library buildings and the Jan Heidt Metrolink Station south of the Project Site.

Furthermore, landscaping for the gateway portal at the main entrance to the campus would extend from the Project's entrance driveway to segments of 13th Street, Arch Street, and 12th Street immediately adjacent to the Project Site's southern boundary. The proposed landscape plan would reflect the visual character of the neighborhood, including the provision of trees and other plant materials along the perimeter of the Project Site to provide screening and improve the streetscape of the immediate Project vicinity.

Response to Comment No. O9-7

The comment claims that the Draft EIR failed to discuss and mitigate impacts on Placerita Creek as related to scenic visual relief, groundwater recharge, and value as a wildlife corridor. As discussed in Section 4.1, Aesthetics, of the Draft EIR, the Project would not develop the entire Project Site and would preserve the majority of the ridgeline and Placerita Creek as open space. Further, the Project Site and the surrounding existing developed areas, such as the residential and commercial uses, collectively do not contain scenic features or prominent visual elements that would constitute an expansive, highly valued landscape that would provide the viewshed for a scenic vista.

Regarding groundwater recharge, as described on page 4.9-16 in Section 4.9, Hydrology and Water Quality, of the Draft EIR, the Project would incorporate an infiltration and drainage basin, multiple catch basins, and landscape designed to minimize or eliminate runoff. On-site runoff from the Project Site would be captured in a closed pipe system and conveyed to Placerita Creek, a soft-bottom drainage channel that allows for percolation of surface water. Moreover, prior to discharging into Placerita Creek, the first-flush runoff would be routed through the underground infiltration chambers or infiltration/drainage basin proposed for the Project. Additionally, a portion of the off-site stormwater, during peak storm events, would be routed to the infiltration/drainage basin. The Project's proposed drainage/infiltration system would capture the first ¾ inch of rainfall from each storm event and use infiltration chambers/basin to infiltrate this rainfall back into the earth. Given this proposed system, the Project would not substantially interfere with groundwater recharge.

Regarding major wildlife connection, the Project Site represents a relatively small amount of open space in the vicinity and the region based on review of aerial imagery. In addition, most of the Project Site consists of non-native grassland and is isolated and already fragmented from intact native habitats in the region and is surrounded by development that limits opportunities for wildlife movement, both locally and regionally. There are large tracts of open space to the north and east

of the Project Site, including the Quigley Canyon Open Space located approximately one mile to the east and the Angeles National Forest just east of SR-14, that are more suitable to serve as wildlife corridors. See also Response to Comment Nos. A1-6 and O6-17.

The comment also asserts that "Instead of preserving and enhancing the creek as proposed for the Alternative 2 housing project, no one will be able to even see the creek and its Northern floodplain turned into a parking lot," which the comment claims is not consistent with the Open Space Element or the PCSSD. Because the elevation of the creek is lower than the surrounding area, views of the creek from the public right-of-way are limited to the areas near the Railroad Avenue bridge over the creek. The analyses of the Project's consistency with the Open Space Element and the PCSSD are presented on pages 4.10-30 through 4.10-37 and page 4.10-40, respectively, in Section 4.10, Land Use and Planning, of the Draft EIR.

The comment also claims that the Project will impact the ridgeline north of Placerita Creek, which is not consistent with the Open Space and Conservation Element, and asserts that it is incorrect to state that the Project is consistent with this element when major impacts to the ridgeline will occur. As discussed in Section 4.10, Land Use and Planning, of the Draft EIR, the Project would not disturb the area beyond the base of the ridgeline north of Placerita Creek and would maintain the ridgeline as natural open space.

Lastly, the comment asserts that the response to "Threshold 4.1(a): Would the Project have a substantial adverse effect on a scenic vista" should be yes. However, as discussed under that threshold, the visuals referred to in the comment present foreground and middleground views that are not recognized as scenic vistas because the local public streets and neighboring developed areas do not provide a viewshed that offers a range of vision in which scenic resources may be observed. In addition, the Project Site and the surrounding existing developed areas, such as the residential and commercial uses, collectively do not contain scenic features or prominent visual elements that would constitute an expansive, highly valued landscape that would provide the viewshed for a scenic vista. Accordingly, the determination of a less-than-significant impact under Threshold 4.1(a) is correct.

Response to Comment No. O9-8

The comment asserts that the Project must include an expensive bridge over the railroad tracks because the PUC would not grant a permit for an at grade crossing and that the Project will have a significant impact unless and until the Dockweiler Extension is completed. However, the Project, which would implement off-site improvements, is not dependent on the completion of the Dockweiler Drive Extension Project. More, specifically, the Project would implement the following off-site improvements:

- Widening of the rail crossing at 13th Street and Railroad Avenue;
- Widening of 13th Street, Arch Street, and 12th Street;
- Complete signalized intersection at 13th Street and Arch Street; and
- Complete signalized intersection at 12th Street and Arch Street.

If the Dockweiler Drive Extension Project is not completed prior to the completion of Project construction, the Project would be conditioned to extend Arch Street to Placerita Canyon Road and complete the two-legged intersection of Placerita Canyon Road and Arch Street, as indicated in the Tentative Tract Map included in Appendix B of the Draft EIR.

The comment also claims that there is a potential for traffic stacking at the 13th Street entrance that may potentially back up across the railroad tracks. The inbound lanes to the Project provide more than 2,100 feet of queueing space, which is more than double the typical storage length for projects of this type and size. The entry gates for Gates 1 and 2 off the intersection of 13th Street and Arch Street have been set back well away from the public street intersection, and, as such, no queuing that would extend to the intersection or the railroad tracks is anticipated.

The comment states their concern that the PUC has not been advised of the Project. As identified in Section 2.0, Project Description, of the Draft EIR, the Project will be required to secure an authorization letter from the PUC for the modifications to the railroad crossing. Construction permits will not be issued by the City until required approvals/permits from all public agencies involved, including the PUC, are granted.

Response to Comment No. O9-9

The comment asserts that the Draft EIR failed to acknowledge or discuss the City's 2012 Climate Action Plan that requires returning to a baseline of 2006 emissions. It further states that wildfire should be addressed in the EIR with respect to GHG impacts. It states that the removal of the seven heritage oaks should be included in the GHG analysis as they sequester carbon dioxide, and that mitigation should be incorporated to reduce GHG emissions.

The 2012 Climate Action Plan had a horizon year of 2020. Since the Project would be completed post 2020, the Climate Action Plan is not relevant to the current project and, therefore, did not need to be addressed in the Draft EIR.

A discussion of the potential for wildfire to result from climate change is addressed in the Climate Change Impacts subsection of Section 4.7, Greenhouse Gas Emissions, under the discussions of both Air Quality (page 4.7-2 of the Draft EIR) and Ecosystems and Wildfire (page 4.7-3 of the Draft EIR). The Project itself is not a direct source of wildfires, and, therefore, the evaluation of the Project's contribution of wildfires is not warranted.

While the seven heritage oaks on-site do store some carbon dioxide, the removal of seven trees would not result in a noticeable increase of GHG emissions. Additionally, the Project proposes to plant 211 oak trees, 450 non-oak trees, and other landscaping, which would also result in GHG sequestration and, therefore, has the potential to offset any loss of carbon sequestration from the removal of the trees.

Mitigation measures are not required for impacts that are shown to be less than significant. As detailed in Response to Comment Nos. O5-14, O5-15, O5-40, and O5-41, the Project adequately addressed the Project design features that would be incorporated to reduce GHG emissions from the Project, and the Draft EIR demonstrated that, by consistency with the documented GHG reduction plans, the Project would result in less-than-significant impacts related to GHG emissions. Therefore, inclusion of mitigation is not necessary.

Response to Comment No. O9-10

The comment asserts that the Project will unavoidably significantly impact the light and glare and affect the night sky and create glare to adjacent residences in contradiction so part A.4 of the City lighting ordinance. Section 4.1, Aesthetics, of the Draft EIR, expresses that the Project Site currently contains no artificial lighting sources. However, it also identifies that the Project Site is surrounded by low-scale development with a variety of minor outdoor night lighting sources

located at single-family homes to the east and commercial and residential uses to the south and west. In addition, there are streetlights along Railroad Avenue to the west and 13th Street, Arch Street, and 12th Street to the south. Additional existing sources of artificial lighting include headlights from vehicle traffic along surrounding roads and accessing commercial and retail buildings to the south and west; railroad crossing lights at the at-grade intersection with 13th Street; traffic signals at Railroad Avenue and its intersections with both 13th Street and 15th Street; illuminated billboard signs along Railroad Avenue; and illuminated signage at commercial sites west and south of the Project Site.

Furthermore, a lighting plan was prepared for the Project, which demonstrated that no increase in foot candles would occur along the boundaries of the Project Site in compliance with SCMC Section 17.51.050, Outdoor Lighting Standards, which requires all lighting to be directed downward to prevent off-site glare and not visible from a public right-of-way and prohibits lighting to illuminate other properties. Accordingly, mitigation measures are not necessary. The comment presents no other information or substantial evidence that lighting will not be directed downward or that light trespass will not occur. The comment is noted for the record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. O9-11

The comment expresses opposition to the removal of the seven heritage oaks on-site. However, as discussed in Response to Comment No. O9-1, of the seven heritage oaks that would be removed, the condition of five was rated C- or D. The Project would replace the 13 oak trees to be removed trees with 211 oak trees, including coast live oak, Engelmann oak, valley oak, and southern live oak.

The comment states that if the City supports the removal of the oak trees, that the decision-makers support Alternative 3 and preserve additional oaks as well as a set back from the creek. As discussed on page 5.0-7 in Section 5.0, Alternatives, of the Draft EIR, because Alternative 3 would disturb the same footprint as the Project, the 13 oak trees proposed to be removed under the Project would also be removed under this alternative with the same number of replacement trees provided as the Project and the same set back from the creek as the Project.

The comment claims that the Draft EIR failed to discuss the impacts on the wildlife corridor as a result of improvements to Placerita Creek. Please refer to Response to Comment No. O9-7.

Response to Comment No. O9-12

The comment states that the Draft EIR concluded that the Project would have no noise impacts despite the fact that the Project would be constructed on vacant land that currently generates nominal noise levels. The comment argues that the Project will inevitably produce noise levels that would result in serious impacts, particularly due to increased traffic and other activities, which must be disclosed and mitigated in the Draft EIR. To support their argument, the comment cites the California Health and Safety Code 46000, which states that excessive noise is a hazard to public health and that the state of California has the responsibility to control and prevent such noise for the welfare of its citizens. The California Health and Safety Code 4600 text is noted for the administrative record. This code section is the genesis for noise ordinances and noise elements throughout the State; thus, these principles are inherent in the City's noise guidelines and standards. The comment concludes with the contention that the Draft EIR is deficient because it fails to disclose and mitigate potential noise impacts to the surrounding neighborhood.

The comment claims that the Draft EIR and the supporting Noise and Vibration Study in Appendix J of the Draft EIR determined that the Project would result in no noise impacts. However, the analysis presented in the Draft EIR found that impacts from construction and operational noise and construction vibration would be less than significant.

The comment also asserts that traffic noise and other noise activities were not disclosed. Traffic noise impacts were analyzed in detail on pages 4.11-17 through 4.11-22 in Section 4.11, Noise, of the Draft EIR. In addition, other sources such as mechanical equipment (HVAC and exhaust fans) and parking lot noise (arrival and departure of vehicles, limited vehicle idling, vehicle door closing, passenger conversations, and vehicle startup) were modeled as shown in Figure 4.11-3 and Table 4.11-3 and analyzed on pages 4.11-15 through 4.11-17 in Section 4.11, Noise, of the Draft EIR. As determined therein, noise impacts from these sources would be less than significant.

Response to Comment No. O9-13

The comment states that the conclusion that most of the potential impacts of the Project do not require mitigation is baffling. The Draft EIR fully complied with all of CEQA's mandates and determined that no significant unavoidable impacts would result from Project implementation. CEQA only requires mitigation measures if substantial evidence exists of potentially significant environmental impacts. In particular, CEQA Guidelines Section 15126.4(a)(4)(A) states that there must be an essential nexus between the mitigation and a potential significant impact of a project.

The comment states preference and support of Alternative 2. As presented in Section 5.0, Alternatives, of the Draft EIR, although Alternative 2, which represents development consistent with the existing zoning of the Project Site, would result in lesser impacts related to biological resources, cultural resources, geology and soils, and tribal cultural resources, it would result in greater impacts related to air quality, energy, GHG emissions, hazards and hazardous materials (regarding wildfire), noise, population and housing, public services, transportation, utilities and service systems, and wildfire.

The comment also states that if the City must have this project that Alternative 3 is preferred. However, as discussed on page 5.0-7 in Section 5.0, Alternatives, of the Draft EIR, because Alternative 3 would disturb the same footprint as the Project, the 13 oak trees proposed to be removed under the Project would also be removed under this alternative with the same number of replacement trees provided as the Project and the same set back from the creek as the Project.

All comments have been noted for the administrative record and forwarded to the decision-makers for consideration.

LETTER P1

From: Greg Hargrove <gngofscv@gmail.com>
Sent: Monday, April 24, 2023 12:22 PM
To: Erika Iverson <EIVERSON@santa-clarita.com>
Subject: Re: Shadowbox studio project, Master Case 21-109

Erica,

I believe the draft EIR does not adequately address the potential delays to evacuation that could occur due to wildfire or earthquake. Based on the Transportation Assessments in Appendix L of the draft EIR, there are unacceptable delays during evacuation under all studied scenarios. Given these realities, I think the project should not be approved unless Shadowbox can negotiate a north end emergency exit route using the MWD right of way to connect with Via Princessa. **P1-1**

Thank you for your consideration of this request.

Sincerely,

Greg Hargrove
24749 Aden Ave.

818-416-7203

Letter No. P1
Greg Hargrove
Newhall, CA 91321

Response to Comment No. P1-1

The comment claims that the Draft EIR did not adequately the potential delays to evacuation that could occur due to wildfire or earthquake and that the delays during evacuation under all scenarios studied in the Transportation Assessment were unacceptable. The comment states that the Project should not be approved unless a north end emergency exit route using the MWD right-of-way to connect with Via Princessa can be negotiated.

As discussed in Response to Comment No. O8-22, the Project's Transportation Assessment contains an evacuation analysis that compared the existing evacuation conditions and evacuation conditions with the Project both without and with the roundabout and without and with the Dockweiler Drive Extension Project. In all scenarios, the evacuation times would improve with the Project due to the off-site improvements that would be implemented by the Project, including widening of 13th Street, Arch Street, and 12th Street and the signalization of the intersections of 13th Street and Arch Street and 12th Street and Arch Street. Based on the results of the Transportation Assessment, the Draft EIR concluded that Project impacts related to evacuation would be less than significant without mitigation. As such, requiring the Project to negotiate a new emergency exit route using the MWD right-of-way is not warranted. This comment is noted for the administrative record and will be forwarded to the decision-makers for review and consideration.

letter opposing proposed Shadowbox project

LETTER P2 Continued

TO: City of Santa Clarita Planning Commission
FROM:
John Fossa
SUBJECT:
Proposed Shadowbox Project Items of Concern
DATE:
MaY 22, 2023

I am writing to urge you to examine specific community concerns before making any decision on the Shadowbox Studio Project. My name is John Fossa. I'm a resident of Placerita Canyon and a member of the PCPOA Board. P2-1

Our community's overarching concern is that we are a Special Standards District, established to preserve and maintain our rural equestrian lifestyle, and this project does not fit with those standards. The size and scale of the project as proposed are monumental - building height, footprint, lighting, changes to waterflow, road configurations, traffic, and so forth. Every request for a zone change or overriding consideration is an attempt to circumvent a standard or a regulation of some kind that is in place for some good and specific reason. The long list of exceptions this project asks should be a cause for concern. Exceptions and excusals compound. P2-2

My main issue with this proposal as a resident is in regard to traffic and safety. We are a community of about 450 homes. Appendix K of the DEIR mentions that the daily population of the Shadowbox project as proposed will be 5,800 employees, yet the report says "no impact" on the canyon in regard to traffic. This is inconceivable. When PCPOA met with Shadowbox's traffic consultant in March we were shown simulations and numbers based on car counting that was done 5 years ago. Those are irrelevant now. If those are the same numbers you were shown, is it possible to study a more realistic assessment of what the actual traffic impact will be? P2-3

The other points I'd ask the commission to look at all coalesce around the fact that the only access/egress point for this proposed project is at that one corner of the site - 3 gates on paper, but one point in reality in that all the gates empty at the same choke point on Arch and 13th Streets. We know that this design is unlike any other project of its kind in Southern California in terms of the ratio of gates to acres or gates to daily population. P2-4

If a private rail crossing into and out of this development were added at 15th Street, or a private gate connecting to Circle J Ranch, this would alleviate so much daily congestion on Arch and 13th. Moreover, it would provide a second exit point in case an emergency evacuation were necessary. Even if a second gate were reserved for trucks only, removing that truck traffic from the 13th and Arch configuration would make that a safer crossing. Shadowbox representatives told the PCPOA board that adding another gate would be expensive and time consuming - not that it's not a good idea. The reality is, a lack of safety is always more costly than safety in the long run. Again, with the compounding impact of the special considerations Shadowbox is asking for, it's especially important for the Commission to plan for safety in this case. P2-4 Continued

Pedestrian and auto safety at the proposed traffic lights where the Dockweiler secondary highway will meet Arch Street and Placeritos Blvd. is a concern. Experts know that timed lights may be good for traffic flow but not definitely for traffic safety. The research on this is very clear. Replacing lights or signs with roundabouts results in 80% fewer accidents, and accidents that do occur tend to be less serious due to lower vehicle speeds. Is it possible to keep the roundabout design that the City and PCPOA developed collaboratively when the Dockweiler extension was designed? Empirically, studies of driver behavior show that we are less safe with series of timed lights. Drivers speed up and run yellow and red lights when they did not catch a green earlier in the series. Anecdotally, I will never forget the teenager I saw flipped up and onto the hood and windshield of the car that hit him on Lyons Ave. several years ago in this exact same scenario - a driver trying to beat the second light and a pedestrian who trusted the walk signal. P2-5

It seems that the argument against the roundabout is studio truck traffic - that the trucks can't handle it. If truck traffic were diverted to an alternate gate, such as at 15th Street, we could have a safe configuration at Arch and 13th. P2-6

Emergency evacuation is a major concern. The Dockweiler extension does not yet exist. Fire in Placerita Canyon is not a question of if - it's a when and from which direction. Wildfire can travel 40 miles an hour. 6,000 cars coming across the 13th street crossing cannot. A fire moving into the canyon from Sierra Highway would be catastrophic. Even when Dockweiler is completed, this scenario would force all evacuating traffic into that same bottleneck at the 13th Street crossing. To be fair, these were the same arguments city staff and Master's University used against Placerita Canyon residents when we were forced to accept the Dockweiler extension: "A development like Placerita Canyon with only one point of egress would never be approved in today's world. A wildfire moving west through Placerita Canyon would be catastrophic. Lives of Master's students and staff are at risk." If these considerations are important - and of course they are - they should be applied consistently from project to project. P2-7

I'm reminded of analyses of airplane crashes where you hear that a string of things has to go wrong for the plane to actually crash. That's what worries me with this project. We'll have human error all day long; I get that. But compound that by sidestepping regulations and standards, and add pressure by pushing riskier shortcuts despite the availability of safer options – then all it takes is a fire to shut down Sierra Highway as meanwhile a truck driver misjudges the severe 90 degree turn at Arch and 13th, or someone tries to beat the light, or a train pauses at the crossing as they regularly do, and we have a massive disaster. P2-8

I believe that your commission's analysis of the details of this proposed project is our one safeguard. The economic benefits of this project have never been in question, but the details need to be looked at carefully. I believe it's possible for Shadowbox to have a profitable operation on this property while achieving the city's economic goals and the preservation of Placerita Canyon's designated status as a rural Special Standards District. At the very least, please consider Alternative #3 as a way to mitigate the negative impacts of this proposed project. P2-9

Thank you so much for the work you do and your attention to this proposal. I look forward to the rest of this process with you.

Sincerely,

John Fossa
221367 Placeritos Blvd, Newhall
661-373-8600

Letter No. P2
John Fossa
Newhall, CA 91321

Response to Comment No. P2-1

This introductory comment states the name of the commenter and their affiliation with Placerita Canyon and the PCPOA. The comment does not address the adequacy of the Draft EIR. Accordingly, the comment is noted, and no additional response is warranted.

Response to Comment No. P2-2

The comment asserts that the Project's building height, footprint, lighting, changes to waterflow, road configurations, traffic, etc. do not fit with the standards of the Placerita Canyon Special Standards District (PCSSD). The comment also states that the Project's requested zone change or overriding consideration is an attempt to circumvent a standard or regulation and that the Project's long list of exceptions is a cause for concern. It should be noted that a large portion of the Project Site is zoned MXN (Mixed Use Neighborhood), and only the area north and a small area south of Placerita Creek are zoned NU5 (Non-Urban 5, one dwelling unit per acre). The Project is permitted in the MXN zone with approval of a Conditional Use Permit (CUP). The zone change request for the northern portion of the Project Site from NU5 to MXN would have no impact on the Project's requirement to comply with the applicable development standards of the PCSSD.

As discussed in Section 4.10, Land Use and Planning, of the Draft EIR, the Project would implement the following components in accordance with the provisions of the PCSSD:

- The Project would be internally and externally pedestrian-oriented with bicycle amenities and accommodations. The Project would construct a Class I trail along the Project frontage at 12th Street, Arch Street, and 13th Street and would be conditioned to either (1) pay an in-lieu fee to contribute toward improvements or (2) construct a connection to a future Class I trail along Railroad Avenue and future connection to the Jan Heidt Newhall Metrolink Station and various retail, commercial, and entertainment uses in Old Town Newhall to promote a pedestrian friendly environment.
- The Project would include a defined entry gateway with landscaping and architectural elements with signage.
- The Project would utilize the MWD right-of-way behind the residences that front on Alderbrook Drive as a plant nursery, which would provide a transition between the residential uses immediately east of the Project Site and the Project.
- The majority of the Project's landscaping would use drought-tolerant trees.
- The proposed buildings would provide 360-degree architectural design with pedestrian-scaled building massing and forms.
- The Project would develop buildings with varied heights, ranging from 18 feet for the catering buildings to 55 feet for the sound stages, as permitted upon extension of the boundaries of the Jobs Creation Overlay Zone to incorporate the entire Project Site.

Furthermore, the Project would be required to undergo several City processes prior to Project approval, including architectural design review, development review, landscape plan review, and

hillside review, to ensure that the Project complies with the requirements of the PCSSD and is compatible with the surrounding area, particularly the residential uses immediately east of the Project Site in Placerita Canyon.

Response to Comment No. P2-3

The comment expresses concern over traffic created by the estimated daily population on the Project Site and the safety issues that may result. The comment incorrectly states that the Draft EIR concluded that there would be no impact due to traffic. Pursuant to Senate Bill 743, the primary metric to evaluate transportation is now vehicle miles traveled (VMT), as referenced in Appendix G of the CEQA Guidelines, and not the effect of traffic growth on street level of service. In accordance with Appendix G of the CEQA Guidelines and the City's Initial Study Checklist, the Draft EIR evaluated impacts related to transportation utilizing the thresholds listed on pages 4.14-8 and 4.14-9 of the Draft EIR, and impacts were concluded to be less than significant for each threshold in compliance with the requirements of CEQA and the CEQA Guidelines.

The comment also asserts that the Project's Transportation Assessment is based on vehicle counts from five years ago, which are now irrelevant. New intersection traffic counts were not performed because the Transportation Assessment was conducted in the middle of the COVID pandemic, and data collection was not possible as traffic volumes would not have reflected pre-pandemic conditions. Traffic counts have been conducted for other development projects in the City in Year 2023, and the results of these traffic counts indicate that current traffic volumes in Santa Clarita have yet to rise to pre-pandemic levels. Using pre-pandemic traffic counts and still applying a yearly growth factor through the pandemic years results in much higher traffic volumes for Existing Conditions than would occur if new counts were taken in 2022 or 2023. Accordingly, contrary to the comment's assertion, the traffic counts used in the Project's Transportation Assessment are more conservative and valid and do not need to be updated.

Response to Comment No. P2-4

The comment states that although the plans show three gates, there is in actuality only one access/egress point for the Project and that all gates empty at the same choke point on Arch Street and 13th Street. The comment claims that this design is unlike any other project of its kind in Southern California in terms of the ratio of gates to acres or gates to daily population.

The Project's evacuation analysis (see Appendix N of the Draft EIR) assumed that all vehicles would exit from 13th Street to Railroad Avenue during an evacuation event and concludes that the Project would improve evacuation times compared to existing conditions due to the off-site improvements that would be implemented by the Project. The commenter's claim that the Project's design is unlike any other project of its kind in Southern California in terms of the ratio of gates to acres or gates to daily population is not related to the adequacy of the Draft EIR.

The comment also provides suggestions for alleviating the daily congestion on Arch Street and 13th Street by providing a second exit point in the northern portion of the Project Site near 15th Street or a private gate connecting to Circle J Ranch in case of an emergency evacuation. As discussed in the public meeting before the Planning Commission on May 16, 2023, an additional access point to the Project Site along Railroad Avenue near 15th Street was considered. An evaluation of this location showed that the railroad tracks were too close to Railroad Avenue to permit the construction of a grade-separated rail crossing.

The California Public Utilities Commission (CPUC) is not amenable to creating any additional at-grade crossings of active rail lines, especially lines carrying trains moving at the speeds of the Metrolink service in the corridor. If an at-grade crossing was considered, CPUC typically requires that two existing at-grade crossings be closed in exchange for one new at-grade crossing.

Nevertheless, the Transportation Assessment in the Draft EIR evaluated the access points to the Project and found that the Project driveways and adjacent intersections would operate at acceptable LOS, meeting City of Santa Clarita thresholds. Thus, the creation of a new exit point is not warranted. The comment's suggestions are noted for the administrative record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. P2-5

The comment expresses concern over the proposed traffic light at the future intersection of Dockweiler Drive, Placerita Canyon Road, and Arch Street and requests that the City keep the roundabout design.

The Transportation Assessment prepared for the Project evaluated in detail both the roundabout and the signalized intersection designs and concluded that, under evacuation conditions, the 1-lane roundabout design would have less capacity for evacuation operations than a signal and would have geometric constraints that do not accommodate horse trailers as easily, which is a concern raised by the community. Accordingly, a signalized intersection design would provide for the most efficient traffic operations under an evacuation scenario when compared with the roundabout or existing conditions.

Response to Comment No. P2-6

The comment states that the argument against the roundabout is due to the Project's truck traffic. It should be noted that Gate 3 at the southeastern corner of the Project Site along 12th Street would provide Project-related egress-only and be restricted to a right-turn movement onto 12th Street. In addition, Gate 2, which is located immediately east of the main entrance at 13th Street and Arch Street, would be access-controlled (unmanned). Accordingly, the Project's truck traffic would primarily access the Project Site through Gate 1 and would not need to pass through the intersection of 12th Street and Arch Street. Since the community has expressed concerns regarding the evacuation of horses and livestock, the traffic signal design would accommodate horse trailers easily when compared to the roundabout, which would be one lane, have less capacity for evacuation operation, and have geometric constraints.

Response to Comment No. P2-7

The comment states that emergency evacuation is a major concern during a wildfire event and that the Project would force all evacuating traffic into the same bottleneck at the 13th Street crossing since the Dockweiler Drive Extension Project does not yet exist. It should be noted that the Project, which would implement off-site improvements, is not dependent on the completion of the Dockweiler Drive Extension Project. More specifically, the Project would implement the following off-site improvements, regardless of the timing of the Dockweiler Drive Extension Project:

- Widening of the rail crossing at 13th Street and Railroad Avenue;
- Widening of 13th Street, Arch Street, and 12th Street;

- Complete signalized intersection at 13th Street and Arch Street;
- Complete signalized intersection at 12th Street and Arch Street;

If the Dockweiler Drive Extension Project is not completed prior to the completion of Project construction, the Project would be conditioned to extend Arch Street to Placerita Canyon Road and complete the two-legged intersection of Placerita Canyon Road and Arch Street, as indicated in the Tentative Tract Map included in Appendix B of the Draft EIR.

The comment related to Master's University does not relate to the Project's impacts or address the adequacy of the Draft EIR. However, the comment is noted for the administrative record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. P2-8

The commenter express concern by describing hypothetical situations that cause major disasters. The comment asserts that human error compounded by sidestepping regulations and standard and added pressure by pushing riskier shortcuts despite the availability of safer options would result in a massive disaster. The Project would be required to demonstrate compliance with all applicable State, regional, and local regulations prior to issuance of a building permit and a Certificate of Occupancy and, as such, would not sidestep any regulations and standards.

Response to Comment No. P2-9

The comment acknowledges the potential benefit of the Project and requests the consideration of Alternative 3 as a way to mitigate the impacts of the Project. As described on page 5.0-7 in Section 5.0, Alternatives, of the Draft EIR, although Alternative 3 would reduce the development's square footage, it would require the same amount of grading as the Project, construct a bridge over Placerita Creek and provide the same bank stabilization as the Project, and disturb the same footprint as the Project. Accordingly, Alternative 3 would have the same impact related to aesthetics, biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, tribal cultural resources, and wildfire. The comment does not address the adequacy of the Draft EIR. However, the comment's request is noted for the administrative record and will be forwarded to the decision-makers for review and consideration.

LETTER P3

Subject: Concerns Regarding the Proposed Shadowbox Studios Project, MC21-109, Comments to the DEIR

Dear Santa Clarita Planning Commissioners,

Writing on my own behalf and not on behalf of any other individual or organization, I am bringing to your attention a number of significant concerns that have been raised by various members of our community regarding the Shadowbox Studios project as it is proposed. As responsible stewards of our city's development and growth, I believe it is crucial that these concerns be addressed and carefully considered during the decision-making process and prior to approval.

As background, my family has been connected to the entertainment industry for the past 40+ years. My husband started in the mailroom of the Screen Actors Guild in 1979, eventually moving into union management. He moved to the producers' side in 1996/97 spending years in Labor Relations as a negotiator at Paramount Pictures, then CBS Studios after the Viacom split. He retired in 2016 as Vice President, Labor Relations. Several of our children work in the entertainment industry in crew positions and members of their respective Locals, which was a long, difficult, and expensive process to establish union membership. **P3-1**

That said, I understand the value the industry brings to the livelihood of those it employs. As a 32-year resident of Santa Clarita (Newhall) with residency over the past 10 years in Placerita Canyon specifically, I also understand how our City values the essence, environment, and existence of our community and the fact that we do not share many of the characteristics and challenges of the City of Los Angeles and surrounding areas or the San Fernando Valley. Good planning is just one aspect of achieving that distinction.

Before approving this project – and it is clear after the second public hearing that is the direction the Planning Commissioners will take – I ask that you thoughtfully consider some of the known challenges of the project, consider mitigations as conditions of approval to lessen the impacts of a large-scale studio rental facility on the existing communities, and balance the needs of the applicant with the needs of Placerita Canyon so that the burden of this project does not fall squarely on residents. Please make this something we can all live with and be proud to have in our city. As proposed, the project is not there yet, in my opinion.

As a starting point, I ask the Planning Commission to consider adoption of the Environmentally Superior Alternative #3 with modifications. **P3-2**

Additional Ingress and Egress:

There is a need for clarification on the absence of discussion regarding an additional ingress and egress to the Shadowbox Studios campus. What factors were taken into account in the Draft Environmental Impact Report (DEIR) to determine that no further access points were required? Was the traffic impact analysis conducted thorough enough to assess all potential effects on surrounding roadways? Were there flaws in the analysis that led to misrepresentations of actual impacts? How will traffic congestion be managed, especially during peak hours and when trains pass? Has city staff properly evaluated the information submitted from resident Del Nelson with the METROLINK / Southern California Regional Rail Authority (SCRRA) regarding the feasibility of a private crossing at 15th Street? Of note, a private crossing at this location would not only alleviate some of the traffic from the Arch and 13th Street intersection, but would also allow Los Angeles County Fire Department direct access to the studio campus from their Railroad Avenue and 15th Street station. There is also the possibility as one speaker mentioned at the May 16, 2023, public hearing for a gate from Circle J to the auxiliary north parking lot, which would also alleviate some of the vehicular traffic from the Arch and 13th Street choke point. Many Circle J residents spoke in favor of the project, so support seems to be built in.

Will at least one additional ingress/egress gate that does not feed into Placerita Canyon be required as a condition of approval?

P3-3

Transportation Infrastructure:

It is important to understand how an additional ingress and egress aligns with the overall transportation infrastructure plan for the Santa Clarita area. Will they complement existing traffic patterns and roadways, or will they necessitate significant modifications to the surrounding transportation network? What measures will be taken to minimize traffic congestion and ensure the safety of both studio personnel and the general public? If for some reason other ingress/egress access gates are not required as a condition of approval, how will synchronization of lights and the railroad occur? I have known Ian Pari, City Traffic Engineer, for many years and respect his work. Yet, when he mentioned at the May 16, 2023, public hearing that the traffic pattern at Reuther Avenue and Soledad was a model of what works well at a rail crossing, I was aghast. The light sequencing does not work well and I cannot imagine the overwhelming gridlock if that same pattern occurs on 13th Street at Railroad Avenue.

What measures will the City put into place to ensure that traffic flow at the railroad crossing remains fluid? Are there conditions of approval planning commissioners may add to regulate acceptable levels of service?

P3-4

Dockweiler Drive Extension Completion:

One critical aspect that requires careful consideration is the completion of the Dockweiler Drive Extension – both segments -- prior to the start of the studio construction, if approved. Given the projected increase in traffic associated with the construction of Dockweiler, the 13th Street Rail Improvement, and the studio campus, it is imperative that sufficient access points and roadways be in place to accommodate this influx of vehicles and heavy equipment. When last approved in 2018, the Dockweiler Drive Extension was identified as a vital component in mitigating potential traffic congestion and ensuring the efficient flow of vehicles in the area. By making the completion of the Dockweiler Drive extension a condition of approval, the Planning Commission can demonstrate its commitment to proactive planning, sustainable development, and the well-being of the community. This step will ensure that appropriate measures are taken to address transportation concerns and mitigate any adverse effects on the surrounding neighborhoods. P3-5

Will the Planning Commission require the completion of the Dockweiler Drive Extension – both segments – prior to the commencement of studio construction as a condition of approval?

Roundabout vs. Signalized Lights:

With the approval of the Dockweiler Drive Extension in 2018, city staff collaboratively worked with residents to design the intersection at 12 Street/Dockweiler Drive/Arch Street and the Placerita Canyon Road/Dockweiler connection. Through community surveys, meetings with staff, and the proverbial blood, sweat, and tears, it was determined that a roundabout was the preferred intersection design at 12 Street/Dockweiler Drive/Arch Street and a signalized T-intersection at the Placerita Canyon Road/Dockweiler connection. In early talks with the applicant, he was on board for the city-approved design. Without notice to residents, a change was proposed at the April 2022 Notice of Preparation Scoping Meeting when the roundabout was removed and signalized lights were proposed. Also, an unexpected grouping of signalized lights at the intersection of 13th Street and Arch Street appeared in the plans. P3-6

If the roundabout does not work for the studio project, as proposed, will the Planning Commission request city staff, the consultant, and the applicant to determine what size and scale of the project would work for the studio and the roundabout to coexist as a condition of approval?

Rail Safety and Quiet Zone:

When the project was first presented, the applicant mentioned he had submitted an application to the California Public Utilities Commission (CPUC) to apply for a quiet zone surrounding his property. Is there a status update on that request? As you are likely aware, train horns serve as vital warning mechanisms to alert pedestrians, cyclists, and motorists of approaching trains. The blaring sound of a train horn serves as an audible signal that can help prevent accidents and save lives. By eliminating the use of train horns in a quiet zone, we risk compromising the safety of individuals who rely on these audible cues in addition to crossing gates to navigate safely across railroad tracks. While the idea of reducing noise levels as it relates to film production may seem appealing, it is essential to consider the potential extreme dangers associated should a quiet zone be implemented. **P3-7**

Will the Planning Commission ensure that no quiet zone ever be implemented at the 13th Street rail crossing as a condition of approval?

Emergency Response and Evacuation Routes:

The potential impact of traffic delays and increased travel times for emergency response vehicles, especially in the event of a railroad emergency, is a critical concern. How will emergency services be ensured and what measures will be in place to minimize any adverse effects on response times and public safety? This is particularly relevant in the case of any train failure or stoppage at the 13th Street rail crossing prior to the Dockweiler Drive extension completion. **P3-8**

What measures will the Planning Commission put in place to minimize any adverse effects on emergency response times and public safety as a condition of approval?

Potential Impacts on Placerita Canyon:

The impact of increased traffic from the Shadowbox Studios project on every day travel and the evacuation routes for Placerita Canyon residents during emergencies is a matter of great concern. The potential risks to the safety of residents, as well as their horses, livestock, and pets, need to be thoroughly assessed and addressed to ensure their well-being and timely evacuation in case of emergencies like wildfires or flooding. Note that the back gate on the east side of the canyon does NOT automatically open during times of crisis. Not all residents have access to or the ability to afford a key card. There is absolutely no egress out of the gate for residents without a working key card. **P3-9**

Will the Planning Commission require the applicant to formalize an evacuation plan for studio personnel that does not add to evacuation traffic at the 13th Street/Arch Street intersection or have vehicles inadvertently travel the private road of Placerita

Canyon Road where they would not have the ability to exit? Depending on the nature of the emergency and the direction in the case of wildfires, will the Planning Commission require alternate routes as a condition of approval?

P3-9
Continued

Land Use Compatibility:

The lack of consideration for the potential of incompatible land use in the Draft Environmental Impact Report (EIR) is disconcerting. The example of the Santa Clarita Soccer Center, which was eventually forced to relocate due to noise complaints from nearby residents, highlights the importance of conducting thorough land use and planning studies. It is crucial to avoid situations where new developments disrupt or displace existing businesses and activities that contribute to our community's character and quality of life. As a reminder, Placerita Canyon shares its roads with tractors, horses, livestock, golf carts, cyclists, and pedestrians on a consistent basis.

Will the Planning Commission require city staff and Michael Baker International as the consultants to go back and thoroughly study land use as a condition of approval?

P3-10

Project Viability and Future Implications:

Given the current and future studio inventory under construction throughout Los Angeles, it is pertinent to evaluate the viability of the Shadowbox Studios project. What will happen if some or most of the sound stages are not rented once the project is completed? We need assurances that the project will not have a negative impact on our community if it does not operate as initially envisioned.

Will provisions be placed by the Planning Commission on acceptable usage of the studio property?

P3-11

Metropolitan Water District (MWD) Approval:

The status of the applicant's request to the MWD for various aspects of the project, such as north parking, emergency access route, secondary access to the north parking lot, and property use for a nursery, must be thoroughly examined.

Will the Planning Commission consider the MWD's approval as a condition for the project's approval? What alternative plans are in place if the MWD does not grant the requested approvals?

P3-12

Cultural Center Proposal:

The potential allocation of a portion of the Shadowbox Studios property for a cultural center has been suggested. What progress has been made in exploring this proposal? Has there been community input and engagement regarding this idea? A cultural center can bring significant benefits to the community, fostering arts, education, and community engagement. It is crucial to consider the feasibility, objectives, and potential partnerships for such a center. Also, will money be set aside by the applicant for the continued preservation of Placerita Canyon?

Will the Planning Commission consider requesting the applicant to bequeath property for public use adjacent to the project site and/or contribute financially to the Placerita Canyon Property Owners Association for furtherance of their mission to preserve and protect the rural equestrian lifestyle of the canyon?

P3-13

In conclusion, I strongly urge the Santa Clarita Planning Commission to carefully consider and address the concerns raised in this letter. Our community's growth and development must be balanced with the preservation of our unique character, the well-being of our residents, and the integrity of existing businesses and activities.

I request that staff respond to all the questions and concerns interested parties have raised and that the Planning Commission conduct an all-inclusive discussion of the proposed Shadowbox Studios project, considering all the aforementioned concerns and any other pertinent factors at the scheduled June 20, 2023, Planning Commission meeting. It is only through such a thorough assessment and a commitment to transparent decision-making that we can ensure the best outcomes for our community.

Thank you for your time, attention, and commitment to serving our community's best interests. I trust that you will carefully consider the points raised in this letter, and all letters and reports received, and take appropriate action to address the concerns stated.

P3-14

Sincerely,

M. Teresa Todd
24760 Oakcreek Avenue
Newhall, CA 91321
ttodd@povpr.com | 661.510.1908 (m)

Letter No. P3
Mamie Teresa Todd
Newhall, CA 91321

Response to Comment No. P3-1

The comment provides an introduction and background of the commenter and brings to the Planning Commissioners' attention a number of significant concerns raised by members of the community regarding the Project. The comment asks that the Commission consider some of the known challenges of the Project, consider mitigation measures as conditions of approval to less the impacts of the Project on the existing communities, and balance the needs of the applicant with the needs of Placerita Canyon residents. The comment does not raise specific issues related to the Draft EIR. However, the comment is noted for the administrative record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. P3-2

The comment asks that the Planning Commission consider the adoption of Alternative 3 with modifications. The comment does not raise specific issues related to the Draft EIR. However, the comment is noted for the administrative record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. P3-3

The comment claims that the discussion regarding an additional ingress and egress to the Shadowbox Studios campus is absent and proceeds to ask a number of questions related to the traffic impact analysis presented in the Draft EIR, including whether at least one additional ingress/egress gate that does not feed into Placerita Canyon be required as a condition of approval.

As discussed in the public meeting before the Planning Commission on May 16, 2023, an additional access point to the Project Site along Railroad Avenue near 15th Street was considered. An evaluation of this location showed that the railroad tracks were too close to Railroad Avenue to permit the construction of a grade-separated rail crossing. The California Public Utilities Commission (CPUC) is not amenable to creating any additional at-grade crossings of active rail lines, especially lines carrying trains moving at the speeds of the Metrolink service in the corridor. If an at-grade crossing was considered, CPUC typically requires that two existing at-grade crossings be closed in exchange for one new at-grade crossing.

The Transportation Assessment in the Draft EIR evaluated the access points to the Project and found that the proposed Project driveways and adjacent intersections would operate at acceptable Levels of Service (LOS), meeting City of Santa Clarita thresholds. City review of the transportation analysis showed that the analysis was thorough and sufficient to satisfactorily evaluate the effects of the Project traffic on the surrounding roadway network.

Neither City staff nor the transportation consultants preparing the Draft EIR are familiar with the concept of a "private rail crossing" that would not have to meet all the safety and design criteria of a public crossing and, therefore, meet the same CPUC criteria discussed above.

The Project does not own the land connecting the north auxiliary parking lot and the Circle J Ranch.

Response to Comment No. P3-4

The comment asserts that it is important to understand how an additional ingress and egress aligns with the overall transportation infrastructure plan for the Santa Clarita area and proceeds to ask a number of questions regarding the Project's impacts to existing traffic patterns and roadway and traffic congestion and what measures the City will put in place to ensure that traffic flow at the railroad crossing remains fluid and if there are conditions of approval planning commissioners may add to regulate acceptable levels of service.

The traffic flows along the roadways serving the Project Site have been evaluated in the Transportation Assessment in the Draft EIR. The study intersections have been evaluated using an LOS methodology consistent with all proposed development projects in the City of Santa Clarita.

Because of the concerns regarding closely spaced intersections, a SYNCHRO simulation model was prepared to evaluate the traffic flow along the 13th Street, 12th Street and Dockweiler Drive/Arch Street corridors. The simulation, presented at the Planning Commission public hearing on May 16, 2023, showed that coordinated traffic flow through these corridors could be accomplished through traffic signal system interconnection. The simulation and the Level of Service analyses were reviewed by the City's traffic signal management staff, who agreed that the proposed roadway and traffic signal system improvements would provide a better Level of Service after Project completion than exists today without the Project.

Response to Comment No. P3-5

This comment calls for the completion of the Dockweiler Drive Extension Project prior to the commencement of studio production as a condition of approval. The Project is not dependent on the completion of the Dockweiler Drive Extension Project. The Project would implement off-site improvements, including widening of 13th Street, Arch Street, and 12th Street and the signalization of the intersections of 13th Street and Arch Street and 12th Street and Arch Street, providing additional roadway capacity and more efficient traffic operations under an evacuation scenario when compared to existing conditions. Accordingly, the Project could precede the Dockweiler Drive Extension Project by improving the Dockweiler Corridor, which comprises 12th Street, Arch Street, 13th Street, and Railroad Avenue, to provide a roadway system that would operate at acceptable LOS for both the Project and the neighborhood traffic.

The Transportation Assessment (Appendix L of the Draft EIR) studied every potential roadway network configuration for the area that could exist post-project. The Transportation Assessment analyzed traffic conditions without and with the Dockweiler Drive Extension Project, without and with the 13th Street crossing improvements, and without and with the roundabout at the intersection of Arch Street and 12th Street. The Transportation Assessment identified operational effects and potential solutions for every scenario that results in satisfactory intersection operations at all study intersections.

In addition, the Staff Report to the Planning Commission has recommended a set of roadway improvements prior to the completion of the Dockweiler Extension that are consistent with the findings of the Draft EIR. With these improvements, Table 18 on the Transportation Assessment (Appendix L of the Draft EIR) shows that the Shadowbox Project can be safely implemented prior to the completion of the Dockweiler Drive Extension Project without negative effects on the area roadway system.

Response to Comment No. P3-6

The comment claims that, through community surveys and meetings with City staff, it was determined that a roundabout was the preferred intersection design at 12th Street, Dockweiler Drive and Arch Street and a signalized T-intersection at the Placerita Canyon Road and Dockweiler extension connection. The comment questions whether the Planning Commission will request that City staff and the applicant determine the size and scale of the Project that would work for the studio and the roundabout to coexist as a condition of approval if the roundabout does not work for the Project.

The Transportation Assessment (Appendix L in the Draft EIR) evaluated the intersection of 12th Street/Arch Street/Dockweiler Drive as both a roundabout and a traffic signal. The analysis showed that both designs worked from an LOS standpoint, with the signalized intersection design resulting in some operational advantages. The analysis also showed that the roundabout would have some serious capacity constraints during an evacuation condition.

Response to Comment No. P3-7

The comment asserts that when the Project was first presented to the community, the applicant mentioned that an application to the CPUC was submitted for a quiet zone surrounding the Project Site and then asks for the status update on the request. The comment also asks whether the Planning Commission will ensure that no quiet zone be implemented at the 13th Street rail crossing as a condition of approval. The Project does not include a request for a quiet zone, and, as such, a quiet zone is not under consideration

Response to Comment No. P3-8

The comment states that the potential impact of traffic delay and increased travel times for emergency response vehicles, especially in the event of a railroad emergency, is a critical concern and asks what measures the Planning Commission will put in place to minimize any adverse effects on emergency response times and public safety as a condition of approval.

The Transportation Assessment (Appendix L of the Draft EIR) contains a specific evacuation memo (Appendix H) that discusses the difference between existing evacuation conditions and evacuation conditions with the Project both without and without the roundabout and without and without the Dockweiler Drive Extension Project. In all cases, the evacuation times would improve with the Project due to the off-site improvements, including widening of 13th Street, Arch Street, and 12th Street and the signalization of the intersections of 13th Street and Arch Street and 12th Street and Arch Street, that would be implemented by the Project to provide additional roadway capacity and accommodate existing and future traffic volumes with the addition of Project traffic regardless of the completion of the Dockweiler Drive Extension Project since the Project is not dependent on its completion. These off-site improvements would facilitate the evacuation of the Placerita Canyon area by reducing the evacuation congestion period at Arch Street and 12th Street. The traffic signal intersection design, when compared to the roundabout design or existing conditions, would provide for the most efficient traffic operations under an evacuation scenario, as well as accommodate horse trailers more easily.

With regard to Placerita Canyon Road, if the Dockweiler Drive Extension Project is not implemented, the Project would be conditioned to extend Arch Street to Placerita Canyon Road

and complete the two-legged intersection of Placerita Canyon Road and Arch Street, as indicated in the Tentative Tract Map included in Appendix B of the Draft EIR.

Response to Comment No. P3-9

The comment states that the impact of increased traffic from the Project on every day travel and the evacuation routes for Placerita Canyon residents during emergencies is a matter of great concern and asks whether the Planning Commission will require the applicant to formalize an evacuation plan for studio personnel that does not add to evacuation traffic at the 13th Street and Arch Street intersection or have vehicles inadvertently travel a private road off of Placerita Canyon Road where they would not have the ability to exit. The comment also asks whether the Planning Commission will require alternate routes as a condition of approval.

Please refer to Response to Comment No. P3-3 above regarding alternate routes. In addition, the Project would be required and be responsible for the preparation of an Emergency Operation Plan, which will include evacuation routes and plans to instruct Project vehicles to the most appropriate and safest routes.

Response to Comment No. P3-10

The comment claims that the lack of consideration of the potential of incompatible land use in the Draft EIR is disconcerting and asks the Planning Commission to require City staff to thoroughly study land use as a condition of approval. The comment asserts that it is crucial to avoid situations where new developments disrupt or displace existing businesses and activities that contribute to the community's character and quality of life.

The Project Site is current vacant, and its development would not disrupt or displace existing business and activities. It should also be noted that a large portion of the Project Site is zoned MXN (Mixed Use Neighborhood), and only the area north and a small area south of Placerita Creek are zoned NU5 (Non-Urban 5, one dwelling unit per acre). The Project is permitted in the MXN zone with approval of a Conditional Use Permit (CUP).

Section 4.10, Land Use and Planning, of the Draft EIR, provided an extensive analysis of the Project's consistency with applicable plans and policies. In addition to implementing Project features in accordance with the provisions of the PCSSD specifically for the North Newhall Area, the Project has also been designed to comply with the City of Santa Clarita Community Character and Design Guidelines.

The comment does not identify any specific impacts of the Project to support the lack of consideration of the potential of incompatible use. As demonstrated in the responses to comments throughout this Final EIR, the Draft EIR adequately and accurately disclosed the environmental impacts of the Project and determined that no significant and unavoidable impacts would result from Project implementation. The comment does not provide any evidence to the contrary, and no additional response is warranted. However, the comment is noted and will be forwarded to the decision-makers for consideration.

Response to Comment No. P3-11

The comment questions the viability of the Project and future implications if some or most of the sound stages are not rented once the Project is completed and asks the Planning Commission whether provisions will be placed on acceptable usage of the Project. The comment asserts that

the community needs assurances that the Project will not have a negative impact on the community if it does not operate as initially envisioned.

CEQA Guidelines Section 15064(d) requires the lead agency to "consider direct physical changes in the environment which may be caused by the project and reasonably foreseeable indirect physical changes in the environment which may be caused by the project." CEQA Guidelines Section 15064(d)(3) specifically states that "An indirect physical change is to be considered only if that change is a reasonably foreseeable impact which may be caused by the project. A change which is speculative or unlikely to occur is not reasonably foreseeable." The level of use and occupancy of the Project in the future is speculative, and, as such, the indirect physical change is not required to be considered. However, the direct physical change from the under-operation of the Project would be reduced impacts to air quality, energy, noise, public services, transportation, and utilities and service systems.

Response to Comment No. P3-12

The comment questions whether the Planning Commission will consider the MWD's approval as a condition for the Project approval and what alternative plans are in place if the MWD does not grant the requested approvals. Use of the MWD property is not required for the operation of the Project. The Project Site can accommodate the required parking. Any use of the MWD property would be subject to the approval of MWD.

Response to Comment No. P3-13

The comment questions whether the Planning Commission will consider requesting the bequeathal of property for public use of a cultural center adjacent to the Project Site and/or contribute financially to the Placerita Canyon Property Owners Association for furtherance of their mission to preserve and protect the rural equestrian lifestyle of the canyon. The comment does not specify the impacts or address the adequacy of the Draft EIR. Accordingly, the comment is noted and will be forwarded to the decision-makers for consideration. No additional response is warranted.

Response to Comment No. P3-14

The comment urges the Planning Commission to carefully consider and address the concerns raised in this letter and all the questions and concerns interested parties have raised and that the Planning Commission conduct an all-inclusive discussion of the Project, considering all the public's concerns. The comment does not specify the impacts or address the adequacy of the Draft EIR. Accordingly, the comment is noted and will be forwarded to the decision-makers for consideration. No additional response is warranted.

LETTER P4

From: Cynthia Harris <moongoddessgreek@gmail.com>
Sent: Tuesday, May 23, 2023 1:59 PM
To: Erika Iverson <EIVERSON@santa-clarita.com>
Subject: Studio Project MC21-109

Hello Ms. Iverson,

Please ask the developer for an updated Oak Tree Report as the current one was completed during the drought and needs to be revised now that they have received rain. Their conditions have improved. Also the Carbon Sequestration has not been considered in the removal of these Heritage Oak Trees. Carbon sequestration is the capturing, removal and storage of carbon dioxide (CO2) from the earth's atmosphere. It's recognised as a key method for removing carbon from the earth's atmosphere.

This is important, as around 45% of the CO2 emitted by humans remains in the atmosphere, which is a significant factor behind global warming. Carbon sequestration can prevent further emissions from contributing to the heating of the planet.
Carbon sequestration can happen in two basic forms: biologically or geologically. Also, while it's being encouraged artificially through various biological and geological methods, it also happens naturally in the environment on the biggest scale.
What is biological carbon sequestration?
Biological carbon sequestration happens when carbon is stored in the natural environment. This includes what are known as 'carbon sinks', such as forests, grasslands, soil, oceans and other bodies of water. This is also known as an 'indirect' or passive form of sequestration.

P4-1

Forests and woodlands are considered one of the best forms of natural carbon sequestration. CO2 binds to plants during photosynthesis, exchanging it for oxygen as a purifying emission.
On average, forests store twice as much carbon as they emit, while an estimated 25% of global carbon emissions are sequestered alongside forests in other vegetative forms, such as grasslands or rangelands (fields, prairies, shrublands etc.).
Protecting such natural environments is therefore crucial to ensuring carbon sinks capture CO2 effectively.
Deforestation poses the biggest threat to this natural process, as does construction or intensive agriculture.

Trees also store carbon dioxide in their fibers helping to clean the air and reduce the negative effects that this CO2 could have had on our environment. According to the Arbor Day Foundation, in one year a mature tree will absorb more than 48 pounds of carbon dioxide from the atmosphere.

The best solution for this project is "alternate # 3" which allows the construction AROUND the many California Native Oak Trees.

Cynthia Harris

Letter No. P4
Cynthia Harris

Response to Comment No. P4-1

The comment requests that the developer update the oak tree report prepared for the Project as their conditions may have improved as asserted in the comment. However, the condition of the existing oak trees on-site is not a factor in their removal to accommodate the development of the Project. The comment proceeds to discuss carbon sequestration and the role of oak trees in capturing, removing, and storing carbon dioxide from the atmosphere. Carbon Sequestration calculation methodologies vary. One method developed by the U.S. Environmental Protection Agency, known as Enviro Atlas (www.epa.gov/enviroatlas), considers a canopy area calculation approach, which uses tree canopy square footage (tree cover) to estimate carbon sequestration.

Although 13 protected oak trees, including seven heritage oaks trees, would be removed to accommodate Project development, the Project would replace the removed trees with 211 oak trees, including coast live oak, Engelmann oak, valley oak, and southern live oak, in addition to 450 trees of different non-oak varieties, including Bubba desert willow, Tuscarora crape myrtle, Brisbane box, little gem magnolia, fruitless olive, Canary Island pine, icee blue podocarpus, and Columbia plane tree. To estimate the amount of carbon sequestration from the 13 existing oak trees to be removed and the 211 replacement oak trees, the total canopy area (square feet) was determined. Based on this approach, the canopy area of oak trees proposed for removal is approximately 20,700 square feet (based on measurements taken from scalable aerial photography), and the proposed tree canopy that would be replaced by the 211 oak tree plantings would be approximately 11,200 square feet. Although there is a difference of approximately 9,500 square feet, the oak trees that would be removed are of varying ages and are in fair to very poor health; whereas the new trees that would be planted will be young and in good to excellent health. This reduction in tree cover is temporary. Within 10 to 15 years, the newly planted oak trees would exceed the total canopy area (tree cover) of the oak trees that would be removed. At full maturity, the long term benefit of the greater number of healthy mitigation replacement trees would result in a substantially greater tree canopy area and increased carbon sequestration over a longer period of time.

In addition, the comment states that the best solution for the Project is Alternative 3, which the comment asserts would allow the construction around the oak trees on-site. As discussed on page 5.0-7 in Section 5.0, Alternatives, of the Draft EIR, because Alternative 3 would disturb the same footprint as the Project, the 13 oak trees proposed to be removed under the Project would also be removed under this alternative with the same number of replacement trees provided as the Project.

3.0 Errata and Clarifications to the Draft EIR

This section identifies minor edits and changes to the Draft EIR in response to public comments received, as well as minor staff edits, to revise or clarify the information in the Draft EIR. The changes provide clarification and additional information for the Draft EIR but do not alter the analysis or conclusions of the document.

Changes were made to the Draft EIR pages as noted below and are identified with revision marks (underline for new text and strike through for deleted text).

Section 2.0, Project Description

The second bullet on page 2.0-22 under Section 2.4.6, Off-Site Improvements, was revised as follows:

- Widening of 13th Street, Arch Street, and 12th Street and installation of traffic signals at the intersections of 13th Street and Arch Street and 12th Street and Arch Street;

The following was added to the fourth bullets on page 2.0-22 under Section 2.4.6, Off-Site Improvements:

- Required railroad crossing improvements at 13th Street that consist of the following:
  - Widening of the rail crossing at 13th Street and Railroad Avenue;

The following was added at the end of Section 2.4.6, Off-Site Improvements, on page 2.0-23:

> If the Dockweiler Drive Extension Project is not completed prior to the completion of Project construction, the Project would be conditioned to extend Arch Street to Placerita Canyon Road and complete the two-legged intersection of Placerita Canyon Road and Arch Street, as indicated in the Tentative Tract Map included in Appendix B of this Draft EIR.

The following was added after the last bullet on page 2.0-25 as follows:

> To allow for operation of equipment emitting air pollutants, including, but not limited to, emergency generators and fire water pumps, the following permit would be required:
>
> - Air Permits from South Coast AQMD

Section 4.3, Biological Resources

The following was added after the first paragraph on page 4.3-5:

> **Crotch's bumble bee (*Bombus crotchii*)** (a candidate CESA-listed species) inhabits open grassland or scrub habitats from coastal California east to the Sierra-Cascade crest and south into Mexico. The species nests primarily in abandoned small mammal burrows but may also nest under perennial bunch grasses or thatched annual grasses, underbrush piles, in old bird nests, and in dead trees or hollow logs.[2] Overwintering sites utilized by Crotch's bumble bee mated queens

include soft, disturbed soil, or under leaf litter or other debris.[3] Ten CNDDB records of Crotch's bumble bee are documented within the regional vicinity of the Project Site including five records between 2017-2020, the closest of which is approximately 2.5 miles to the southwest. While the majority of the Project Site is disturbed or vegetated with non-native grasslands with few floral resources, upland scrub communities within the Project Site provide suitable overwintering and foraging habitat for the species, and the species has a potential to occur.

[2] Williams, P.H., R.W. Thorp, L.L. Richardson, and S.R. Colla, Bumble Bees of North America: An Identification Guide, 2014, p. 208; Hatfield, R., Jepsen, S., Foltz Jordan, S., Blackburn, M., Code, Aimee, A Petition to the State of California Fish and Game Commission to List Four Species of Bumblebees as Endangered Species, 2018.

[3] Goulson, D., Bumblebees: Behavior, Ecology, and Conservation, 2010, p. 317.

The following was added after the second paragraph on Page 4.3-6:

Mountain Lion

The Project Site is within the range of the Southern California/Central Coast Evolutionary Significant Unit of mountain lion (*Puma concolor*) (a candidate CESA-listed species), and scrub vegetation communities within the Project Site provide moderately suitable foraging habitat for the species.[4] However, the likelihood for mountain lion to be present within the Project Site is low due to a variety of factors: the Project Site is not within a natural landscape block; the nearest blocks are within the Santa Susana Mountains southwest of Highway 5 and the San Gabriel Mountains east of the Antelope Valley (S.R. 14) Freeway.[5] The CDFW mountain lion habitat suitability dataset predicts relatively low probability of use within the Project Site, similar to the urban center of Santa Clarita.[6] The Project Site is bounded to the southwest and southeast by commercial development, and to the east by residential development. While Placerita Creek may provide local movement pathways for mobile species such as mule deer and coyote, on a broader landscape scale Placerita Creek and its surrounding open spaces (including Quigley Canyon Open Space) are cut off from suitable mountain lion habitat linkages and corridors by S.R. 14 approximately 2 miles to the east. A review of iNaturalist shows that mountain lions or their sign (e.g., scat, tracks) were not documented within the Santa Clarita Valley in the area bounded by Highway 5, S.R. 14, and the Santa Clara River. Newhall Creek, situated downstream of the Project Site, is heavily constrained on both sides by intensive residential and commercial development. Accordingly, the potential for mountain lion occurrence is low and Placerita Creek is not likely to function as regional movement pathway for mountain lions, which require extensive home ranges. Due to the extensive development surrounding the Project Site discussed above, human presence due to surrounding land uses is already at a high level and development of the Project would not represent a significant change in this condition. Additionally, the Project would maintain Placerita Creek as a natural bottom drainage course and, thus, would not introduce new barriers within Placerita Creek that would impede mountain lion movement or dispersal, or constrain wildlife corridors and pinch

points leading to severed migration. Accordingly, the Project would not result in adverse impacts to mountain lion.

[5] CDFW Mountain Lion Habitat Suitability – Summer – CDFW [ds2916], https://map.dfg.ca.gov/metadata/ds2916.html, accessed June 2023.

The following was added after the third paragraph on page 4.3-18:

If Crotch's bumble bee is present during Project construction, ground disturbance and vegetation removal from the Project Site during the breeding season could result in the incidental loss of breeding success or otherwise lead to nest abandonment in areas within and adjacent to the Project Site. In addition to potential habitat loss, human disturbance, heavy machinery, and construction activities could potentially result in direct mortality to Crotch's bumble bee adults, eggs, or larvae. These impacts would be potentially significant.

The last sentence under "**FIELD RECONNAISSANCE SURVEY**" on page 4.3-16 was revised as follows:

Representative photographs of the Project Site were taken and an inventory of all plant and vertebrate wildlife species observed was compiled (provided in Appendix **D**).

The following revisions were made to MM-BIO-1 on page 4.3-19:

MM-BIO-1: The Project shall implement the following best management practices (BMPs) during construction:

- The contractor shall clearly delineate the construction limits and prohibit any construction-related traffic outside those boundaries;
- Project-related vehicles shall observe a 10-mile-per-hour speed limit within the unpaved limits of construction;
- All open trenches or excavations shall be fenced and/or sloped to prevent entrapment of wildlife species;
- All food-related trash items such as wrappers, cans, bottles, and food scraps generated during Project construction shall be disposed of in closed containers only and removed daily from the Project Site;
- No deliberate feeding of wildlife shall be allowed;
- No pets shall be allowed on the Project Site;
- No firearms shall be allowed on the Project Site;

- If vehicle or equipment maintenance is necessary, it shall be performed In the designated staging areas;
- If construction must occur at night (between dusk and dawn), all lighting shall be shielded and directed downward to minimize the potential for glare or spillover onto adjacent properties and to reduce impacts on local wildlife; ~~and~~
- During construction, heavy equipment shall be operated in accordance with standard BMPs. All equipment used on-site shall be properly maintained to avoid leaks of oil, fuel, or residues. Provisions shall be in place to remediate any accidental spills;~~.~~
- Access routes, staging, and construction areas shall be limited to the minimum area necessary to achieve the Project goal and minimize impacts to jurisdictional resources and sensitive natural communities, including locating access routes and ancillary construction areas outside of these areas;
- To the satisfaction of the City, the Applicant shall retain a qualified biologist to prepare a Wildlife Relocation and Avoidance Plan. The Wildlife Relocation and Avoidance Plan shall describe all species of special concern (SSC) that could occur within the Project Site and proper avoidance, handling, and relocation protocols. The Wildlife Relocation Plan should include species-specific avoidance buffers and suitable relocation areas at least 200 feet outside of the Project Site. The qualified biologist should submit a copy of a Wildlife Relocation and Avoidance Plan to CDFW for approval prior to any clearing, grading, or excavation work on the Project Site;
- To the satisfaction of the City, the Applicant shall retain a qualified biologist to conduct worker environmental awareness training. The qualified biologist shall communicate to workers that upon encounter with an SSC (e.g., during construction or equipment inspections), work must stop, a qualified biologist must be notified, and work may only resume once a qualified biologist has determined that it is safe to do so; and
- To avoid direct injury and mortality of SSC, the Applicant shall have a qualified biologist on-site to relocate wildlife of low mobility that may be injured or killed because of development. Wildlife should be protected, allowed to move away on its own (non-invasive, passive relocation), or relocated to suitable habitat adjacent to the Project Site. In areas where a SSC is found, work may only occur in these areas after a qualified biologist has determined it is safe to do so. Even so, the qualified biologist shall advise workers to proceed with caution.

A qualified biologist shall be on site daily during initial ground and habitat disturbing activities as well as vegetation removal. Then, the qualified biologist shall be on site weekly or bi-weekly (once every two weeks) for the remainder of the Project phase until the cessation of all ground and habitat disturbing activities, as well as vegetation removal, to ensure that no wildlife is harmed.

The biological monitor(s) shall have appropriate handling permits or shall obtain appropriate handling permits to capture, temporarily possess, and relocate wildlife to avoid harm or mortality in connection with Project construction and activities.

A Scientific Collecting Permit is required to monitor Project impacts on wildlife resources, as required by environmental documents, permits, or other legal authorizations; and, to capture, temporarily possess, and relocate wildlife to avoid harm or mortality in connection with otherwise lawful activities (14 Cal. Code of Regs. Section 650). The CDFW's Scientific Collection Permits webpage (https://wildlife.ca.gov/Licensing/Scientific-Collecting#53949678) provides additional information.

If any SSC are harmed during relocation or a dead or injured animal is found, work in the immediate area shall stop immediately, the qualified biologist should be notified, and dead or injured wildlife be documented immediately. A formal report shall be sent to CDFW within three calendar days of the incident or finding. The report shall include the date, time of the finding or incident (if known), and location of the carcass or injured animal and circumstances of its death or injury (if known). Work in the immediate area may only resume once the proper notifications have been made and additional mitigation techniques have been identified to prevent additional injury or death.

The following was added after the last paragraph on page 4.3-19:

MM-BIO-6: The Permittee must retain a qualified biologist with the appropriate take authorization (if such authorizations are available to biologists at the time of survey) to conduct surveys to determine presence/absence. A survey must be conducted at least one year before the City issues a grading permit. The survey must review the entire Project Site by a qualified biologist familiar with the species' behavior and life history. A minimum of three surveys must also be conducted during peak flying season when the species is most likely to be detected above ground, between March 1 to September 1.[11] The qualified biologist must utilize a non-lethal survey methodology and obtain appropriate photo vouchers for species

confirmation.[12] During the surveys, the biologist must identify inactive small mammal burrows and other potential nest sites with visible flags to reduce the risk of take. Survey results, including negative findings, must be submitted to CDFW applying for appropriate permits. At a minimum, a survey report provide the following:

a) A description and map of the survey area, focusing on areas that could provide suitable habitat for Crotch's bumble bee. The map must show surveyor(s) track lines to document that the entire site was covered during field surveys.

b) Field survey conditions that include name(s) of qualified biologist(s) and brief qualifications, date and time of survey, survey duration, general weather conditions, survey goals, and species searched.

c) Map(s) showing the location of nests/colonies.

d) A description of physical (e.g., soil, moisture, slope) and biological (e.g., plant composition) conditions where each nest/colony, if any, is found. A sufficient description of biological conditions, primarily impacted habitat, must include native plant composition (e.g., density, cover, and abundance) within impacted habitat (e.g., species list separated by vegetation class, density, cover, and abundance of each species).

---

[11] Robbin W. Thorp, Donald S. Horning Jr., and Lorry L. Dunning, Bumble Bees and Cuckoo Bumble Bees of California, Bulletin of the California Insect Survey 23, 1983.

[12] California Bumble Bee Atlas, Photography Tips and Bee Processing Workflow, https://www.cabumblebeeatlas.org/photography-tips.html, accessed June 7, 2023.

MM-BIO-7: If Crotch's bumble bees are detected, the qualified biologist must identify the location of any nests within and adjacent to the Project Site. A 15-meter no disturbance buffer zone must be established around any identified active nest(s) to reduce the risk of disturbance or accidental take. A qualified biologist may expand the buffer zone as necessary to prevent disturbance or take.

MM-BIO-8: If Crotch's bumble bee is detected and impacts to Crotch's bumble bee cannot be feasibly avoided, the Permittee must consult with CDFW and obtain appropriate take authorization from CDFW (pursuant to California Fish and Game Code Section 2080, *et seq*). Appropriate authorization from CDFW under the California Endangered Species Act (CESA) may include an Incidental Take Permit (ITP) or a Consistency Determination in certain circumstances, among other options (California Fish and Game Code Sections 2080.1, 2081). Early consultation is encouraged, as significant modification to the Project and mitigation techniques

may be required to obtain an ITP. The California Fish and Game Code may require that CDFW issue a separate CEQA document before issuing an ITP for the Project unless the Project's CEQA document addresses all Project impacts on CESA endangered, threatened, and/or candidate species.

MM-BIO-9: Any floral resource associated with Crotch's bumble bee that will be removed or damaged by the Project must be replaced at not less than 1:1. Floral resources must be replaced as close to their original location as feasible. If active Crotch's bumble bee nests are identified and floral resources cannot be replaced within 200 meters of their original location, floral resources must be planted in the most centrally available location relative to identified nests. This location should be not more than 1.5 kilometers from any identified nest. Replaced floral resources may be split into multiple patches to meet distance requirements for multiple nests. These floral resources must be maintained in perpetuity and be replanted and managed as needed to ensure the habitat is preserved.

The first paragraph on page 4.3-20 was revised as follows:

Implementation of **Mitigation Measures MM-BIO-1** through **MM-BIO-3** and **MM-BIO-6** through **MM-BIO-9** would reduce the potential to impact candidate, sensitive, or special-status species, including Crotch's bumble bee, southern California rufous-crowned sparrow, Cooper's hawk, and yellow warbler, as well as other native birds protected under the MBTA and CFGC, to a less-than-significant level.

Section 4.5, Energy

The discussion under Subsection 4.5.5, Project Design Features, was revised as follows:

4.5.5 PROJECT DESIGN FEATURES

No specific Project Design Features are proposed with respect to energy resources. However, Project Design Feature~~s~~ PDF-GHG-1 ~~and PDF-GHG-2~~ in Section 4.7, Greenhouse Gas Emissions, of this Draft EIR would reduce the Project's energy consumption.

The last sentence in the first full paragraph after Table 4.5-2 on page 4.5-11 was revised as follows:

Moreover, in accordance with Project Design Feature PDF-GHG-1~~2~~, the Project would install rooftop photovoltaic (PV) systems and solar panels for all the sound stage buildings and the support building for localized use, which would exceed California Energy Code standards and reduce the Project's demand on SCE supplies.

The second to last sentence in the last paragraph on page 4.5-11 was revised as follows:

> Furthermore, the Project Site would provide EV charging stations and EV-ready parking spaces pursuant to the requirements of the CALGreen Code ~~Project Design Feature PDF-GHG-1~~, which would reduce fuel usage.

The second sentence under "***State Energy Regulations***" on page 4.5-12 was revised as follows:

> Furthermore, ~~in accordance with PDF-GHG-1 and PDF-GHG-2,~~ the Project ~~Site~~ would provide EV charging stations and EV-ready parking spaces pursuant to the requirements of the CALGreen Code~~,~~ and install rooftop PV systems and solar panels for all the sound stage buildings and the support building for localized use in accordance with Project Design Feature PDF-GHG-1.

Section 4.7, Greenhouse Gas Emission

The last sentence in the first paragraph on page 4.7-13 was revised as follows:

> Operation of the Project would generate approximately ~~11,373~~ 11,707 $MTCO_2e$ per year, which includes the amortized construction emissions.

The Mobile Emission Source and the Total Annual Emissions in Table 4.7-2 on page 4.7-13 were revised as follows:

Table 4.7-3
PROJECT OPERATION GREENHOUSE GAS EMISSIONS

Emission Source	Annual Emissions (MTCO2e)
Construction[a]	196
Operation	11,177
Area	<1
Energy	1,688
Mobile	~~8,627~~8,960
Solid Waste	774
Water	12
Generators	37
Food Trucks[b]	39
Total	**~~11,373~~11,707**

Notes:
$MTCO_2e$ = metric tons of carbon dioxide equivalent.
[a] Amortized construction-related GHG emissions over 30 years.
[b] Food truck emissions account for electricity and waste emissions only. Mobile emissions are assumed to be part of the anticipated daily emissions quantifications and are included under mobile emissions.
*Refer to **Appendix C** of this Draft EIR for detailed model input/output data.*
Source: Rincon Consultants, Inc. 2023.

The last sentence in the last paragraph on page 4.7-13 was revised as follows:

> As shown in **Table 4.7-3**, operation of the Project with the application of the reductions discussed above would generate approximately ~~7,252~~ 7,586 MTCO2e per year.

The Mobile Emissions and the Total emissions in Table 4.7-3 on page 4.7-14 were revised as follows:

Table 4.7-4
PROJECT OPERATION REDUCED GREENHOUSE GAS EMISSIONS

Emission Source	Annual Emissions ($MTCO_2e$)
Construction[a]	196
Operation	7,056
Area	<1
Energy	1,688
Additional Renewables Portfolio Standard Reduction	(183)
Mobile	~~8,627~~8,960
Electric Vehicle Charging Stations	(3,357)
Solid Waste	774
Assembly Bill 341	(581)
Water	12
Generators	37
Food Trucks[b]	39
Total	**~~7,252~~7,586**

Notes:
$MTCO_2e$ = metric tons of carbon dioxide equivalent.
[a] Amortized construction-related GHG emissions over 30 years.
[b] Food truck emissions account for electricity and waste emissions only. Mobile emissions are assumed to be part of the anticipated daily emissions quantifications and are included under mobile emissions.
*Refer to **Appendix C** of this Draft EIR for detailed model input/output data.*
Source: Rincon Consultants, Inc. 2023.

The following was added to the second to last sentence of the first full paragraph on page 4.7-15:

> The Project's consistency with the applicable 2020-2045 RTP/SCS strategies is discussed in **Table 4.7-4**, as well as in **Table 4.10-1** in Section 4.10, Land Use and Planning, of this Draft EIR.

Section 4.13, Public Services

The second to last sentence in the last full paragraph on page 4.13-9 was revised as follows:

> The proposed buildings would be equipped with an approved automatic fire sprinkler system. In addition, ~~As~~ discussed in Section 4.16, Utilities and Service Systems, the Project would be required to install 8 public fire hydrants and ~~36~~ 21 public on-site fire hydrants, which would need to be installed, tested, and accepted by LACoFD prior to construction, and 15 private on-site fire hydrants, which would need to be installed, tested, and accepted by LACoFD prior to building occupancy. ~~to accommodate the development.~~

Section 4.16, Utilities and Service Systems

The first three sentences in the second paragraph under Threshold 4.16(a) on page 4.16-24 were revised as follows:

> In addition, the Project would install 8-inch water meters (rated for 3,500 gpm continuous flow and 4,700 gpm as the maximum intermittent flow) in order to meet the fire-flow requirements for the Project, which is set at ~~2,500 gpm for 2 hours~~

4,000 gpm for 4 hours at 20 psi. Three public fire hydrants flowing simultaneously may be used to achieve the required fire flow.~~With regard to public fire flow, the Los Angeles County Fire Department's Fire Prevention Division has stipulated a requirement of 4,000 gpm at 20 psi for a duration of 4 hours. If multiple hydrants are used to meet this requirement, each hydrant would be required to have a flow of 1,250 gpm minimum for 2 hours at 20 psi.~~

Section 4.17, Wildfire

The second full paragraph on page 4.17-13 was revised as follows:

~~Pursuant to County Code Section 20.16.060, the Project Site would meet a 2-hour on-site fire flow requirement of 2,500 gallons per minute (gpm) with a residual pressure of 20 pounds per square inch (psi).~~ As discussed in Section 4.16, Utilities and Service Systems, of this Draft EIR, the Project would install 8-inch water meters (rated for 3,500 gpm continuous flow and 4,700 gpm as the maximum intermittent flow) in order to provide adequate fire flow support on-site. Furthermore, as required by the Santa Clarita Valley Water Agency (SCV Water), the Project's service connections and metering would be sized for dual service for domestic and fire water needs. The LACoFD's Fire Prevention Division has also stipulated a public fire flow requirement of 4,000 gpm at 20 psi for a duration of 4 hours. Three public fire hydrants flowing simultaneously may be used to achieve the required fire flow.~~ If multiple hydrants are used to reach this requirement, each hydrant used would be required to have a flow of 1,250 gpm minimum for 2 hours at 20 psi, which would require the~~ Project would be required to install 8 public fire hydrants and ~~36~~ 21 public on-site fire hydrants, which would need to be installed, tested, and accepted by LACoFD prior to construction, and 15 private on-site fire hydrants, which would need to be installed, tested, and accepted by LACoFD prior to building occupancy.~~ to accommodate the proposed development.~~ In addition, the Project would connect to existing electrical and telecommunications infrastructure surrounding the Project Site. The required water meters and fire hydrants would comply with SCV Water and LACoFD standards.

Section 5.0, Alternatives

The second sentence in the last paragraph on page 5.0-22 in Section 5.0, Alternatives, of the Draft EIR, was revised as follows:

~~As with the Project,~~ Based on the information provided by the LACSD, the amount of wastewater generated by Alternative 2 is~~ based on the water demand identified above, which is equal to 0.32 million~~ 198,419 gallons per day (gpd). The water demand and the solid waste and wastewater generation are ~~substantially~~ greater than those identified for the Project (i.e., 207 AFY of water, ~~0.19 mgd~~ 186,301 gpd of wastewater, and 2,900 pounds of solid waste).

Appendix C: Air Quality and Greenhouse Gas Emissions Study

The 12th line item/adjustment factors on page 2 of 36 in the CalEEMod Output in Appendix A was revised as follows:

Construction Off-road Equipment Mitigation – SCAQMD Rule 403, watering and vehicle speed from Table 1 BACT applicable to all construction activity. Based on

applicant information, the construction fleet > 50 HP would be equipped with Tier 4~~-~~3 engines and level 3 DPF filters

Appendix L: Transportation Assessment

Table 17 on page 125 was revised as follows:

Table 17
EXISTING CONDITIONS WITH RAILROAD CROSSING UPGRADE (YEAR 2021)
INTERSECTION LEVELS OF SERVICE

No.	Intersection	Peak Hour	Existing Conditions		Existing with Project Conditions			
			Delay	LOS	Delay	LOS	Δ Delay	Impact

Notes:
Intersections are signalized except as otherwise noted.
[a] Intersection is 2-way stop-controlled
[b] Future intersection to be constructed by the Project.
[c] Intersection would be constructed as part of the Dockweiler Extension

This page intentionally left blank.

4.0 Mitigation Monitoring and Reporting Program

The environmental mitigation measures identified in **Table 4-1**, Mitigation Monitoring and Reporting Program, on the following pages, were incorporated into the approval for this Project in order to reduce potentially significant environmental impacts. In addition, the project design features (PDF) proposed by the Project are included in **Table 4-1** to ensure that these PDF are implemented prior to the issuance of a Certificate of Occupancy. A completed and signed checklist for each mitigation measure or PDF indicates that the mitigation measure or PDF has been complied with and implemented and fulfills the City of Santa Clarita's monitoring requirements with respect to PRC Section 21081.6. The mitigation measures and PDFs are numbered as presented in the Draft EIR.

This page intentionally left blank.

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
AIR QUALITY					
PDF-AQ-1	The Project will operate off-road diesel-powered construction equipment to meet or exceed CARB and USEPA Tier 3 off-road emissions standards with Level 3 diesel particulate filters or be alternatively (non-diesel) fueled to reduce diesel exhaust emissions.	Field inspection sign off	City of Santa Clarita Community Development Department, Planning Division	During construction	
PDF-AQ-2	Off-road diesel-powered construction equipment will meet or exceed the CARB and USEPA Tier 3 off-road emissions standards and be equipped with Level 3 diesel particulate filters at a minimum.	Field inspection sign off	City of Santa Clarita Community Development Department, Planning Division	During construction	
BIOLOGICAL RESOURCES					
MM-BIO-1	The Project shall implement the following best management practices (BMPs) during construction: • The contractor shall clearly delineate the construction limits and prohibit any construction-related traffic outside those boundaries; • Project-related vehicles shall observe a 10-mile-per-hour speed limit within the unpaved limits of construction; • All open trenches or excavations shall be fenced and/or sloped to prevent entrapment of wildlife species; • All food-related trash items such as wrappers, cans, bottles, and food scraps generated during Project construction shall be disposed of in closed containers only and removed daily from the Project Site; • No deliberate feeding of wildlife shall be allowed; • No pets shall be allowed on the Project Site;	Field inspection sign off	City of Santa Clarita Community Development Department, Planning Division	During construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	• No firearms shall be allowed on the Project Site; • If vehicle or equipment maintenance is necessary, it shall be performed in the designated staging areas; • If construction must occur at night (between dusk and dawn), all lighting shall be shielded and directed downward to minimize the potential for glare or spillover onto adjacent properties and to reduce impacts on local wildlife; • During construction, heavy equipment shall be operated in accordance with standard BMPs. All equipment used on-site shall be properly maintained to avoid leaks of oil, fuel, or residues. Provisions shall be in place to remediate any accidental spills; • Access routes, staging, and construction areas shall be limited to the minimum area necessary to achieve the Project goal and minimize impacts to jurisdictional resources and sensitive natural communities, including locating access routes and ancillary construction areas outside of these areas; • To the satisfaction of the City, the Applicant shall retain a qualified biologist to prepare a Wildlife Relocation and Avoidance Plan. The Wildlife Relocation and Avoidance Plan shall describe all species of special concern (SSC) that could occur within the Project Site and proper avoidance, handling, and relocation protocols. The Wildlife Relocation Plan should include species-specific avoidance buffers and suitable relocation areas at least 200 feet outside of the Project Site. The qualified biologist should submit a copy of a Wildlife Relocation and Avoidance Plan to CDFW for approval prior to any clearing, grading, or excavation work on the Project Site; • To the satisfaction of the City, the Applicant shall retain a qualified biologist to conduct worker environmental awareness training. The qualified biologist shall				

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	communicate to workers that upon encounter with an SSC (e.g., during construction or equipment inspections), work must stop, a qualified biologist must be notified, and work may only resume once a qualified biologist has determined that it is safe to do so; and • To avoid direct injury and mortality of SSC, the Applicant shall have a qualified biologist on-site to relocate wildlife of low mobility that may be injured or killed because of development. Wildlife should be protected, allowed to move away on its own (non-invasive, passive relocation), or relocated to suitable habitat adjacent to the Project Site. In areas where a SSC is found, work may only occur in these areas after a qualified biologist has determined it is safe to do so. Even so, the qualified biologist shall advise workers to proceed with caution. A qualified biologist shall be on site daily during initial ground and habitat disturbing activities as well as vegetation removal. Then, the qualified biologist shall be on site weekly or bi-weekly (once every two weeks) for the remainder of the Project phase until the cessation of all ground and habitat disturbing activities, as well as vegetation removal, to ensure that no wildlife is harmed. The biological monitor(s) shall have appropriate handling permits or shall obtain appropriate handling permits to capture, temporarily possess, and relocate wildlife to avoid harm or mortality in connection with Project construction and activities. A Scientific Collecting Permit is required to monitor Project impacts on wildlife resources, as required by environmental documents, permits, or other legal authorizations; and, to capture, temporarily possess, and relocate wildlife to avoid harm or mortality in connection with otherwise lawful activities (14 Cal. Code of Regs. Section 650). The CDFW's Scientific Collection Permits				

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	webpage (https://wildlife.ca.gov/Licensing/Scientific-Collecting#53949678) provides additional information. If any SSC are harmed during relocation or a dead or injured animal is found, work in the immediate area shall stop immediately, the qualified biologist should be notified, and dead or injured wildlife be documented immediately. A formal report shall be sent to CDFW within three calendar days of the incident or finding. The report shall include the date, time of the finding or incident (if known), and location of the carcass or injured animal and circumstances of its death or injury (if known). Work in the immediate area may only resume once the proper notifications have been made and additional mitigation techniques have been identified to prevent additional injury or death.				
MM-BIO-2	A qualified biological monitor familiar with special-status species with potential to occur on the Project Site shall be present during initial ground disturbance or vegetation removal activities. The biological monitor shall have the authority to temporarily stop work if one or more individuals of these special-status species are observed; the monitor shall then relocate these individuals to suitable undisturbed habitat, outside the areas directly and indirectly affected by ground disturbance activities.	Preparation and submittal of a report by a qualified biologist to the City that documents ground disturbance or vegetation removal activities to the City	City of Santa Clarita Community Development Department, Planning Division	During construction	
MM-BIO-3	Construction activities should occur outside of the bird breeding season (generally February 1 to August 31) to the extent practicable. If construction must occur within the bird breeding season, then no more than three days prior to initiation of ground disturbance and/or vegetation removal, a nesting bird preconstruction survey shall be conducted by a qualified biologist within the disturbance footprint plus a 100-foot buffer (500 feet for raptors), where feasible. If the Proposed Project is phased or construction activities stop for more than one week,	Surveys performed by a qualified biologist; preparation and submittal of a report by a qualified biologist to the City that documents the results of the survey	City of Santa Clarita Community Development Department, Planning Division	Pre-construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	a subsequent preconstruction nesting bird survey shall be required prior to each phase of construction. Preconstruction nesting bird surveys shall be conducted during the time of day when birds are active (typically early morning or late afternoon) and shall factor in sufficient time to perform this survey adequately and completely. A report of the nesting bird survey results, if applicable, shall be submitted to the property owner/developer for review and approval prior to ground and/or vegetation disturbance activities. If nests are found, their locations shall be flagged. An appropriate avoidance buffer for passerines is generally 100 feet and up to 500 feet for raptors; however, the buffer distance may be modified by a qualified biologist depending upon the species and the proposed work activity. The avoidance buffer shall be determined and demarcated by a qualified biologist with bright orange construction fencing or other suitable material that is clearly visible to construction personnel and heavy equipment operators. Active nests shall be monitored periodically by a qualified biologist until it has been determined that the nest is no longer being used by either the young or adults. No ground disturbance shall occur within this buffer until the qualified biologist confirms that the breeding/nesting is completed, and all the young have fledged. If no nesting birds are observed during preconstruction surveys, no further actions would be necessary.				
MM-BIO-4	Impacts to sensitive vegetation communities shall be avoided to the greatest extent feasible. Compensatory mitigation for impacts to big sagebrush scrub and scale broom scrub communities, such as on-site restoration, off-site restoration, or purchase of credits through an approved Mitigation Bank or through applicant sponsored mitigation (e.g., on-site restoration), to reduce impacts to sensitive vegetation communities shall be accomplished at a minimum ratio of 1:1; however, the final ratio shall be determined and approved by	Review and approval of compensatory mitigation by CDFW	CDFW; City of Santa Clarita Community Development Department, Planning Division	Prior to issuance of grading permit	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	the California Department of Fish and Wildlife (CDFW) prior to issuance of a grading permit. If on-site or off-site restoration is feasible, a Restoration Plan shall be prepared and submitted for approval by the CDFW prior to initiating construction or any site disturbance. At a minimum, the Restoration Plan shall include the following: • A description of the purpose and goals of the restoration • Identification of success criteria and performance standards • Methods of site preparation • Irrigation plan and schedule • Best management practices • Maintenance and monitoring program • Adaptive management strategies • Key stakeholders and responsible parties • Funding • Contingencies				
MM-BIO-5	Compensatory mitigation for temporary and permanent impacts to land subject to the jurisdiction of U.S. Army Corps of Engineers (USACE), Regional Water Quality Control Board (RWQCB), and/or CDFW, such as purchase of credits through an approved Mitigation Bank or through applicant sponsored mitigation (e.g., on-site restoration), shall be accomplished at a minimum ratio of 1:1; however, the final ratio shall be determined and approved by the USACE, RWQCB, and/or CDFW prior to impacting state- or federally regulated waters. If on-site restoration would occur, a Restoration Plan, as identified in Mitigation Measure MM-BIO-4, shall be prepared and submitted for approval by CDFW, USACE, and RWQCB prior to initiating construction or any site disturbance.	Review and approval of compensatory mitigation and/or preparation and submittal of a Restoration Plan to CDFW, USACE, and/or RWQCB	CDFW, USACE, and/or RWQCB; City of Santa Clarita Community Development Department, Planning Division	Pre-construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
MM-BIO-6	The Permittee must retain a qualified biologist with the appropriate take authorization (if such authorizations are available to biologists at the time of survey) to conduct surveys to determine presence/absence. A survey must be conducted at least one year before the City issues a grading permit. The survey must review the entire Project Site by a qualified biologist familiar with the species' behavior and life history. A minimum of three surveys must also be conducted during peak flying season when the species is most likely to be detected above ground, between March 1 to September 1. The qualified biologist must utilize a non-lethal survey methodology and obtain appropriate photo vouchers for species confirmation. During the surveys, the biologist must identify inactive small mammal burrows and other potential nest sites with visible flags to reduce the risk of take. Survey results, including negative findings, must be submitted to CDFW applying for appropriate permits. At a minimum, a survey report provide the following: a) A description and map of the survey area, focusing on areas that could provide suitable habitat for Crotch's bumble bee. The map must show surveyor(s) track lines to document that the entire site was covered during field surveys. b) Field survey conditions that include name(s) of qualified biologist(s) and brief qualifications, date and time of survey, survey duration, general weather conditions, survey goals, and species searched. c) Map(s) showing the location of nests/colonies. d) A description of physical (e.g., soil, moisture, slope) and biological (e.g., plant composition) conditions where each nest/colony, if any, is found. A sufficient description of biological conditions, primarily impacted habitat, must include native plant composition (e.g., density, cover, and abundance) within impacted habitat (e.g., species list	Surveys performed by a qualified entomologist; preparation and submittal of a report by a qualified entomologist to the City that documents the results of the survey	City of Santa Clarita Community Development Department, Planning Division	Pre-construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	separated by vegetation class, density, cover, and abundance of each species).				
MM-BIO-7	If Crotch's bumble bees are detected, the qualified biologist must identify the location of any nests within and adjacent to the Project Site. A 15-meter no disturbance buffer zone must be established around any identified active nest(s) to reduce the risk of disturbance or accidental take. A qualified biologist may expand the buffer zone as necessary to prevent disturbance or take.	Preparation and submittal of a report by a qualified entomologist to the City that documents establishment of the buffer zone to the City	City of Santa Clarita Community Development Department, Planning Division	During construction	
MM-BIO-8	If Crotch's bumble bee is detected and impacts to Crotch's bumble bee cannot be feasibly avoided, the Permittee must consult with CDFW and obtain appropriate take authorization from CDFW (pursuant to California Fish and Game Code Section 2080, et seq). Appropriate authorization from CDFW under the California Endangered Species Act (CESA) may include an Incidental Take Permit (ITP) or a Consistency Determination in certain circumstances, among other options (California Fish and Game Code Sections 2080.1, 2081). Early consultation is encouraged, as significant modification to the Project and mitigation techniques may be required to obtain an ITP. The California Fish and Game Code may require that CDFW issue a separate CEQA document before issuing an ITP for the Project unless the Project's CEQA document addresses all Project impacts on CESA endangered, threatened, and/or candidate species.	Issuance of an Incidental Take Permit or Consistency Determination	CDFW	Pre-construction	
MM-BIO-9	Any floral resource associated with Crotch's bumble bee that will be removed or damaged by the Project must be replaced at not less than 1:1. Floral resources must be replaced as close to their original location as feasible. If active Crotch's bumble bee nests are identified and floral resources cannot be replaced	Review and approval of available off-site location and/or preparation and submittal of a	City of Santa Clarita Community Development	Periodic inspections post-construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	within 200 meters of their original location, floral resources must be planted in the most centrally available location relative to identified nests. This location should be not more than 1.5 kilometers from any identified nest. Replaced floral resources may be split into multiple patches to meet distance requirements for multiple nests. These floral resources must be maintained in perpetuity and be replanted and managed as needed to ensure the habitat is preserved.	Maintenance Plan to the City	Department, Planning Division		
CULTURAL RESOURCES					
MM-CR-1	Prior to the start of construction, the Project applicant shall retain a cultural resources principal investigator, who meets the Secretary of the Interior's Professional Qualification Standards for Archaeology. This principal investigator shall create a Worker's Environmental Awareness Program (WEAP) pamphlet that shall be provided as training to construction personnel to understand the requirements for the protection of cultural resources. This training shall include examples of archaeological cultural resources to look for and protocols to follow if discoveries are made. The principal investigator shall develop the training and supply any Project-specific supplemental materials necessary to execute the training.	Preparation and submittal of a WEAP pamphlet/training materials by a qualified cultural resources investigator to the City	City of Santa Clarita Community Development Department, Planning Division	Pre-construction	
MM-CR-2	Archaeological resources monitoring shall be conducted by a cultural resources principal investigator, who meets the Secretary of the Interior's Professional Qualification Standards for Archaeology, during Project-related earth-disturbing activities pursuant to the California Office of Historic Preservation standards. Monitoring shall entail visual inspection of Project-related earth-disturbing activities (i.e., grubbing and grading, trenching, shoring, mass excavation, footings, utility installation, etc.) on a full-time basis unless the cultural resources principal investigator	Preparation and submittal of a report by a cultural resources investigator to the City that documents ground disturbance	City of Santa Clarita Community Development Department, Planning Division	During construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	deems that construction monitoring can be conducted on a part-time basis or is no longer required.				
MM-CR-3	If previously unidentified cultural resources are discovered, the cultural resources principal investigator, who meets the Secretary of the Interior's Professional Qualification Standards for Archaeology, shall have the authority to divert or temporarily halt ground-disturbing activities in the area of discovery to allow for evaluation. The principal investigator shall evaluate the find and contact the City of Santa Clarita as soon as possible with recommendations as to the significance and proper treatment of the find. Depending on the nature of the find, the determination of significance may require additional excavation, potentially including the preparation and execution of a Phase II Archaeological Testing Plan. The City of Santa Clarita, acting with the advice of the consulting principal investigator, shall determine the significance and treatment of the discovered resources. If the resources are Native American in origin, then the City of Santa Clarita shall notify consulting tribes and seek their input as to the significance and treatment of the find.	Preparation and submittal of a report by a cultural resources investigator to the City that documents ground disturbance	City of Santa Clarita Community Development Department, Planning Division; Native American tribes	During construction	
MM-CR-4	Avoidance and preservation-in-place are the preferred treatment for both archaeological sites and tribal cultural resources, but avoidance is not always feasible. For significant cultural resources meeting the definition of a historical resource per CEQA Guidelines Section 15064.5(a) or a unique archaeological resource per PRC Section 21083.2(g) as determined by the City of Santa Clarita, a Research Design and Data Recovery Program to mitigate impacts shall be prepared by the consulting archaeologist and approved by the City of Santa Clarita before being carried out using professional archaeological methods. Before construction activities are allowed to resume in the	Preparation and submittal of a Research Design and Data Recovery Program report by a cultural resources investigator to the City	City of Santa Clarita Community Development Department, Planning Division; Los Angeles County coroner; Native American Heritage Commission	During construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	affected area, the Data Recovery Program shall be completed to the satisfaction of the City of Santa Clarita. Work may continue on other parts of the Project while consultation and treatment are concluded. If human remains are encountered, work within 50 feet of the discovery shall be suspended, and the City of Santa Clarita shall be contacted immediately. The City of Santa Clarita shall, in turn, contact the Los Angeles County coroner. If the remains are deemed Native American in origin, the coroner shall contact the Native American Heritage Commission, which shall identify a most likely descendant in compliance with PRC Section 5097.98 and CEQA Guidelines Section 15064.5. The most likely descendant shall have up to 48 hours to visit the site and make recommendations as to the treatment and final deposition of the remains. Work may be resumed at the landowner's discretion but shall only commence after consultation and treatment have been concluded to the satisfaction of the City of Santa Clarita. Work may continue on other parts of the Project Site while consultation and treatment are conducted.				
MM-CR-5	All archaeological resources collected during the course of Project construction (including those collected during the Phase I Investigation and other pre-Project identification efforts) shall be taken to a properly equipped archaeological laboratory, where they shall be cleaned, analyzed, and prepared for curation. At a minimum, and unless otherwise specified in any treatment plans prepared for the Project, all resources shall be identified, analyzed, catalogued, photographed, and labeled. At the close of the Project, the collection shall be donated to a public institution with a research interest in the materials and the capacity to care for the materials in perpetuity. Accompanying notes, maps, and photographs shall also be filed at the repository, as	Preparation and submittal of a final report documenting the monitoring, collection, lab work, and analysis by a qualified archaeologist to the City Documentation of donation of the	City of Santa Clarita Community Development Department, Planning Division	During construction and post-construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	appropriate. The cost of curation is assessed by the repository and is the responsibility of the Project applicant. At the conclusion of monitoring and laboratory work, a final report shall be prepared describing the results of the cultural mitigation monitoring efforts. The report shall include a summary of the field and laboratory methods, an overview of the cultural background of the Project vicinity, a catalog of cultural resources recovered, an analysis of cultural resources recovered and their scientific significance, and recommendations. A copy of the report shall also be submitted to the designated museum repository (if applicable).	collection to a public institution			
GEOLOGY AND SOILS					
PDF-GEO-1	Site earthwork for the Project will be performed in accordance with the recommendations in the Geotechnical Investigation related to site preparation, removal and recompaction, temporary stability of excavations, fill placement and compaction, and trench backfill and compaction. Recommendations include, but are not limited to, the following: • Compressible materials within areas planned to support the proposed building structures will be excavated to competent material and replaced with compacted fill soils. • Excavations over 5 feet will be slot-cut, shored, or cut to a 1:1 slope gradient. Surface water will be diverted away from the exposed cut and not be allowed to pond on top of the excavations. • Areas prepared to receive structural fill and/or other surface improvements will be scarified to a minimum depth of 6 inches, brought to at least	Issuance of a grading permit	City of Santa Clarita Building and Safety Division	Pre-construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	optimum moisture content, and recompacted to at least 90 percent relative compaction. • Trench backfill will be compacted in uniform lifts (generally not exceeding 8 inches in compacted thickness) by mechanical means to at least 90 percent relative compaction. • The western portion of the ridge will have a debris fence for slope stability, to catch the cobbles and boulders that may dislodge from the slope.				
PDF-GEO-2	Foundation design and construction for the Project will adhere to the recommendations in the Geotechnical Investigation. Upon design finalization, the Geotechnical Consultant will review and verify structural loads for the proposed buildings. The proposed buildings will utilize the recommended foundations: conventional foundations, post-tension foundations, or mat slabs. The proposed bridge will adhere to the preliminary recommendations for deepened foundations.	Issuance of a grading permit	City of Santa Clarita Building and Safety Division	Pre-construction	
PDF-GEO-3	If retaining walls are implemented as part of the Project, they will be backfilled with low expansive soils if no on-site soils fit the required minimum parameters. Embedded structural walls will be designed to withstand the lateral earth pressures. All retaining wall structures will be provided with appropriate drainage and appropriately waterproofed. Shallow foundations recommendations and bearing capacities will be designed per the Geotechnical Investigation.	Issuance of a grading permit	City of Santa Clarita Building and Safety Division	Pre-construction	
PDF-GEO-4	Pavement used for construction of the Project will adhere to the recommendations of the Geotechnical Investigation for minimum pavement sections. Final pavement sections will be confirmed by the Project civil engineer based upon the	Issuance of a grading permit	City of Santa Clarita Building and Safety Division	Pre-construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	Project traffic index and the City of Santa Clarita minimum requirements, as necessary.				
PDF-GEO-5	Concrete in contact with on-site soils will be designed in accordance with the American Concrete Institute Criteria for soils having a negligible sulfate exposure condition. Concrete will be designed in accordance with the minimum guidelines outlined in the Geotechnical Report for minimum thickness, pre-saturation, reinforcement, crack control, and subgrade compaction.	Issuance of a grading permit	City of Santa Clarita Building and Safety Division	Pre-construction	
PDF-GEO-6	The proposed structures will have positive drainage of surface water that flows away from the structures. Positive drainage may be accomplished by providing drainage away from buildings at a gradient of at least 2 percent for a distance of at least 5 feet, and further maintained by a swale or drainage path at a gradient of at least 1 percent. Where necessary, drainage paths may be shortened by use of area drains and collector pipes.	Issuance of a grading permit	City of Santa Clarita Building and Safety Division	Pre-construction	
PDF-GEO-7	During construction, the interpolated subsurface conditions will be checked in the field by the Geotechnical Consultant. The Geotechnical Consultant will also perform observation and testing during future grading, excavations, backfill of utility trenches, preparation of pavement subgrade and placement of aggregate base, foundation or retaining wall construction, or when an unusual soil condition is encountered at the Project Site. The Geotechnical Consultant will review grading plans, foundation plans, and final Project drawings prior to construction.	Preparation and submittal of a report by the Geotechnical Consultant to the City verifying field check; issuance of a grading permit	City of Santa Clarita Building and Safety Division	During construction; pre-construction	
MM-GEO-1	Prior to the start of construction, the Project applicant shall retain a qualified professional paleontologist as defined by Society for Vertebrate Paleontology (SVP) (2010)	Preparation and submittal of a WEAP by a	City of Santa Clarita Community	Pre-construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	standards. The paleontologist shall create a Worker's Environmental Awareness Program pamphlet that shall be provided as training to construction personnel to understand regulatory requirements for the protection of paleontological resources. The training class(es) shall include examples of paleontological resources to look for and protocols to follow if discoveries are made. The paleontologist shall develop Project-specific training and supply any supplemental materials necessary to execute the training.	qualified paleontologist to the City	Development Department, Planning Division		
MM-GEO-2	Paleontological resources monitoring shall be conducted under the guidance of the qualified professional paleontologist and by a qualified paleontological resource monitor(s) as defined by SVP (2010) standards. Monitoring shall entail the visual inspection of excavated or graded area and trench sidewalls. The monitor shall have the authority to temporarily halt or divert construction equipment in order to investigate and salvage finds. The paleontological monitor shall have the authority to take sediment samples and test for microfossils at the discretion of the qualified professional paleontologist. If no significant fossils have been exposed or the qualified professional paleontologist has otherwise found that the scientific value of the resource has been exhausted, the qualified professional paleontologist may determine that full-time monitoring is no longer necessary or, with the approval of the City, may reduce or eliminate monitoring.	Preparation and submittal of a report by a qualified paleontologist and qualified paleontological resource monitor(s) to the City that documents ground disturbance	City of Santa Clarita Community Development Department, Planning Division	During construction	
MM-GEO-3	In the event that a paleontological resource is encountered when a monitor is not on-site or a potentially significant resource is encountered that requires additional investigation or cannot be quickly salvaged by the paleontological monitor, all construction shall cease within 50 feet of the discovery and the qualified professional paleontologist shall be notified immediately. If the monitor is	Preparation and submittal of a Paleontological Testing Plan by a qualified paleontologist and qualified	City of Santa Clarita Community Development Department, Planning Division	During construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
	present at the time of discovery, then the monitor shall have the authority to temporarily divert the construction equipment around the find and notify the qualified professional paleontologist. The qualified professional paleontologist shall then visit the site and assess the resource for its scientific significance. Project excavations shall continue elsewhere, monitored by a paleontological resource monitor. The qualified professional paleontologist shall evaluate the find and contact the City as soon as possible with recommendations as to the significance and potential treatment of the find. Depending on the nature of the find, the determination of significance may require additional excavation, potentially including the preparation and execution of a Paleontological Testing Plan. If significant, depending on the nature of the resource, treatment shall require the preparation and execution of a Paleontological Treatment Plan. The City, acting with the advice of the qualified professional paleontologist, shall determine the significance and treatment of the discovered resources.	paleontological resource monitor(s) to the City			
MM-GEO-4	All significant fossils collected shall be prepared in a properly equipped paleontology laboratory to a point ready for permanent curation. Preparation shall include the careful removal of excess matrix from fossil materials and stabilizing and repairing specimens, as necessary. Any fossils encountered and recovered shall be prepared to the point of identification. Following the initial laboratory work, all fossil specimens shall be identified to the lowest taxonomic level, analyzed, photographed, and catalogued, before being delivered to an accredited local museum repository for permanent curation and storage.	Preparation and submittal of a report of the paleontological mitigation monitoring efforts by a qualified paleontologist to the City	City of Santa Clarita Community Development Department, Planning Division	Post-construction	
MM-GEO-5	At the conclusion of laboratory work and preparation for museum curation, a final report shall be prepared describing	Preparation and submittal of a	City of Santa Clarita	Post-construction

	the results of the paleontological mitigation monitoring efforts associated with the Project. The report shall be prepared for the lead agency and the Project applicant. The report shall include a summary of the field and laboratory methods, an overview of the geology and paleontology in the Project vicinity, a list of taxa recovered (if any), an analysis of fossils recovered (if any) and their scientific significance, and recommendations. If the monitoring efforts produced fossils, then a copy of the report shall also be submitted to the designated museum repository. Accompanying notes, maps, and photographs shall also be filed at the repository. The cost of curation is assessed by the repository and is the responsibility of the Project applicant.	report of the paleontological mitigation monitoring efforts by a qualified paleontologist	Community Development Department, Planning Division		
GREENHOUSE GAS EMISSIONS					
PDF-GHG-1	Subject to City and other agency approvals, rooftop photovoltaic (PV) systems and solar panels will be installed for all the sound stage buildings and the support building for localized use.	Issuance of a building permit	City of Santa Clarita Community Development Department, Planning Division	Pre-construction	
PUBLIC SERVICES					
PDF-PUB-1	All buildings shall be accessible to LACoFD apparatus by way of access roadways, with an all-weather surface of not less than 28 feet in width. The roadway shall be extended to within 150 feet of all portions of the exterior walls when measured by an unobstructed route along the exterior of the building. The roadway shall provide approved signs and/or striping stating “No Parking – Fire Lane” and shall be maintained in accordance with the Los Angeles County Fire Code.	Issuance of a building permit	City of Santa Clarita Community Development Department, Planning Division; LACoFD	Pre-construction	

Table 4-1
Mitigation Monitoring and Reporting Program

Mitigation Measure/Project Design Feature No.	Mitigation Measure	Method of Review Verification	Responsible Agency	Timing	Status of Implementation
PDF-PUB-2	A 12-foot-tall security fence primarily made of woodcrete would be installed along the majority of the perimeter of the Project Site and open rail wrought-iron fencing would be installed along the southwestern corner of the Project Site, adjacent to the proposed office building.	Issuance of a building permit	City of Santa Clarita Community Development Department, Planning Division	Pre-construction	
PDF-PUB-3	Closed-circuit television security cameras would be installed throughout the Project Site that would be monitored full-time at a manned security station on-site.	Issuance of a Certificate of Occupancy	City of Santa Clarita Community Development Department, Planning Division	Prior to occupancy and operation	
PDF-PUB-4	Licensed security personnel would be provided to patrol the Project Site at all times (i.e., 24 hours per day, seven days per week). Additional stage security would also be provided at key entry points to and within individual building areas.	Issuance of a Certificate of Occupancy	City of Santa Clarita Community Development Department, Planning Division	Prior to occupancy and operation	
TRANSPORTATION					
PDF-TA-1	The Project will incorporate several Transportation Demand Measures (TDM) features to contribute to the reduction in VMT and vehicle trips to and from the Project Site. These actions are consistent with City and State of California transportation and GHG policies and objectives. The following measures will be incorporated into the Project to reduce VMT and vehicle trips: • Flexible work schedules and telecommuting programs • Bicycle amenities (bicycle racks, lockers, showers, etc.)	Issuance of a Certificate of Occupancy	City of Santa Clarita Community Development Department, Planning Division	Prior to occupancy and operation

	excavation. The Fernandeño Tataviam Band of Mission Indians shall assign a Native American monitor to each grading or other earthwork machine engaged in ground disturbing activity that is active more than 100 feet from any other grading or other earthwork machine. If tribal cultural resources are encountered, the Native American monitor shall have the authority to request that ground-disturbing activities cease within 60 feet of discovery to assess and document potential finds in real time.	monitoring by a Native American representative during ground disturbance	Department, Planning Division; Fernandeño Tataviam Band of Mission Indians		
MM-TCR-3	In the event that tribal cultural resources are discovered during Project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease, and a cultural resources principal investigator, who meets the Secretary of the Interior's Professional Qualification Standards for Archaeology, shall assess the find. The principal investigator and tribal monitor shall have the authority to request ground-disturbing activities cease within the area of a discovery. Work on the other portions of the Project outside of the buffered area may continue during this assessment period. Consultation between the Fernandeño Tataviam Band of Mission Indians tribal monitor and lead agency shall occur to determine further action required for any inadvertent discoveries of tribal cultural resources. Depending on the nature of the find, the determination of significance may require additional excavation, potentially including the preparation and execution of a Phase II Archaeological Testing Plan. The City of Santa Clarita, acting with the advice of the consulting principal investigator and the Fernandeño Tataviam Band of Mission Indians, shall determine the significance and treatment of the discovered resources.	Preparation and submittal of a Phase II Archaeological Testing Plan by a qualified cultural resources principal investigator and Native American monitor to the City	City of Santa Clarita Community Development Department, Planning Division; Fernandeño Tataviam Band of Mission Indians	During construction	
MM-TCR-4	Prior to the disposition of any inadvertent discovery of tribal cultural resources, the Fernandeño Tataviam Band of	Consultation with the Fernandeño	City of Santa Clarita	During construction

OTHER COMMENTS SUBMITTED DURING THE DRAFT EIR COMMENT PERIOD

This page intentionally left blank.

Letters Requesting Extension of the Draft EIR Comment Period

This section of **Attachment 1** to this Final EIR contains letters that requested an extension of the Draft EIR public review period but did not provide any comments on the adequacy of the EIR. With regard to public review, the City has provided the following public review periods and opportunities for public input during the Shadowbox Studios EIR process:

- Publication and distribution of a Notice of Preparation (NOP) on March 28, 2022, notifying interested agencies, organizations, and persons that the City would be preparing an EIR for the Project and inviting comments on the scope and content of the EIR. The public review period for the NOP was from March 29, 2022, to April 28, 2022.
- Public scoping meeting held on April 21, 2022, at which the City accepted comments on the scope and content of the EIR.
- Publication and distribution of a Notice of Completion and a Notice of Availability of the Draft EIR on April 6, 2023, which notified interested agencies, organization, and persons that the City was accepting comments on the Draft EIR. The public review period for the Draft EIR began on April 6, 2023, and ended on May 22, 2023.
- Three Planning Commission meetings held on April 18, 2023, May 16, 2023, and June 20, 2023, to solicit comments from the public and the Planning Commission on the Draft EIR.

The public review process undertaken by the City for the Draft EIR fully complies with all requirements of CEQA and the CEQA Guidelines. Given the above, and based on direction provided by the City's Planning Commission, the Draft EIR review period was not extended.

As these comments do not address the adequacy of the Draft EIR, no additional response is required. However, these letters are included in the record and forwarded to the decision-makers for consideration.

Re: Master Case Number 21-109
Request for Extension of Time to Comment or Otherwise Respond to the Draft EIR

Joe:

I hope this finds you well. My firm has been retained by the Placerita Canyon Property Owners Association ("PCPOA") to represent their interests concerning the proposed Shadowbox Studios Project. My partner, Ty Green, and myself will be working on this matter. Ty's email address is: Green@ammcglaw.com; my email address is: JeffH@ammcglaw.com.

We understand that comments to the draft EIR are due on or before May 22, 2023. I am assuming you are aware of not only the enormity of the project but the voluminous nature of the report, over 500 pages with over 5,000 pages of appendices. It is not feasible for PCPOA to be able to substantively respond to all the draft's details by that date.

PCPOA requests a minimum of an additional 15 days upon which to comment and present substantive responses to the Draft EIR. Moreover, we believe that, given the scope and complexity of this project, special circumstances exist to exceed the 60-day maximum review period. We therefore request that the review period be extended to allow for a total comment period of 90 days. We would appreciate your response as soon as possible given the looming deadline. Ty and I look forward to working with you and City Staff. Please feel free to contact me should you have any questions.

Very truly yours,

ADAMSKI MOROSKI MADDEN

Re: Newhall Studio Project 21-109 Request for an extension to review the EIR
Please copy to all members of the Planning Commission

Dear Ms. Iverson and Planning Commission Members

SCOPE is a planning and conservation non-profit group now celebrating its 35th year of work in the Santa Clarita Valley.

This project proposes to build a huge industrial development on an area of floodplain currently zoned for housing. It will fundamentally change the character of the Newhall neighborhood and old town district which the City has strived to create and which the City has spent enormous amounts of public funds to promote. It will destroy a number of oaks including the iconic heritage oak located in the middle of this flood plain which is older than the town of Newhall itself.

The EIR was released just prior to the Easter and Passover holidays when many people had their minds on family and religious celebrations and thus may not have been aware of its release. It is also a massive document requiring a great deal of reading and research.

Due to all of these factors and the importance of widespread community involvement on a project that will so dramatically change the character of an existing neighborhood, we request that you extend the comment period to at least 120 days for this document.

It is vitally important that you receive input from a wide variety of community members on this project and that community members have adequate time to provide you with a full array of information to help you make the best decision for our community.

Thank you for your consideration of this matter.

Sincerely,

Lynne Plambeck,

President

To the Planning Commission:

Please require the developer for this project to change the plan in order to save the heritage oak and other oaks on this property (12 oaks total). Old growth trees are our best tool for slowing down climate change because they absorb so much CO2 -- far more than newly planted trees, which take about 10 years to even BEGIN absorbing carbon. How can we even *think* of chopping down these magnificent and crucial natural wonders? And for what? Another building?

This project will change the whole character of Old Town Newhall. Please allow more time for review by extending the comment period to 120 days.

Also, please copy this message to all planning commissioners.

Thank you,

Cher Gilmore

Re: Request for Extension of Comment Period for the Draft Environmental Impact Report for Shadowbox Studios Project (Master Case 21-109) and Immediate Access to Reference Documents

Dear Mr. Crawford and Ms. Iverson:

We are writing on behalf of the Coalition for Responsible Equitable Economic Development in Los Angeles (CREED LA) to respectfully request that the City of Santa Clarita ("City") extend by at least 30 days the public review and comment period for the Draft Environmental Impact Report ("DEIR") prepared for the Shadowbox Studios Project (Master Case 21-109) ("Project"), which currently ends on May 22, 2023.

We are requesting an extension due to the City's failure to provide timely access to all documents referenced in the DEIR. We ask that the City immediately comply with our April 27, 2023 request for immediate access to all documents referenced and incorporated by reference in the DEIR, including but not limited to (1) all documents referenced and incorporated by reference in the DEIR which are not available by weblink; (2) all unlocked native input files for CalEEMod modeling performed for the Project, as referenced in DEIR sections 4.2 and 4.7 and Appendix C; (3) any Excel file(s) prepared by Rincon Consultants, Inc. in connection with its

printed on recycled paper

air quality analysis and calculations for the Project; (4) missing documents referenced in DEIR section 4.14 and Appendix L, including Transportation Analysis Updates in Santa Clarita (May 19, 2020), Transportation Analysis Updates in Santa Clarita (June 20, 2023) and the Placerita Meadows EIR Traffic Study; (5) any reports or other documents reflecting an April 27, 2022 site visit by Michael Baker International, as referenced in Appendix D, pg. 18.

On April 27, 2023, our office submitted a request, pursuant to the California Environmental Quality Act ("CEQA"),[1] for immediate access to any and all *documents referenced or relied upon in the Draft Environmental Impact Report*, excluding the DEIR, its appendices and documents available on the City of Santa Clarita website as of that date.[2] CEQA's section 21092(b)(1) and CEQA Guidelines section 15087(c)(5) require that "all documents referenced" and "all documents incorporated by reference" in an environmental impact report shall be "readily accessible to the public during the lead agency's normal working hours" during the entire public comment period.[3]

On May 8, 2023, the City responded that it was "in receipt of your public records request," and that because the request involved numerous separate and distinct records, the City claimed an extension pursuant to Government Code section 7922.535(b) to provide the missing documents. The City stated that "pursuant to the extension provision, you will be contacted on or before May 22, 2023, with the availability of the records responsive and appropriate for disclosure."

As an initial matter, our April 27, 2023 request was made pursuant to the provisions of CEQA, not the California Public Records Act.[4] Therefore, the extension provision cited by the City (Government Code section 7922.535(b)) is inapplicable.

Moreover, CEQA compels a lead agency to make all documents referenced in an environmental impact report "available for review" during the entire public comment period.[5] The courts have held that the failure to provide even a few pages

---

[1] Pub. Resources Code §§ 21000 *et seq*.
[2] Letter to Jason Crawford and Erika Iverson, City of Santa Clarita from Sheila Sannadan, Adams Broadwell Joseph & Cardozo re: Request for Immediate Access to Documents Referenced in the Draft Environmental Impact Report – Shadowbox Studios Project (Master Case 21-109) (April 27, 2023).
[3] Pub. Resources Code § 21092(b)(1); 14 C.C.R. § 15087(c)(5).
[4] Government Code §§ 7920.000, *et seq*.

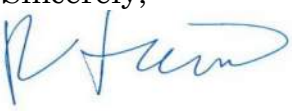
printed on recycled paper

of a CEQA document for a portion of the public review period invalidates the entire CEQA process, and that such a failure must be remedied by permitting additional public comment.[6] It is also well settled that a CEQA document may not rely on hidden studies or documents that are not provided to the public.[7]

By failing to make all documents and underlying data referenced in the DEIR readily available during the entirety of the public comment period, the City is depriving members of the public the ability to meaningfully comment on the potentially significant environmental impacts of the Project and is violating the procedural mandates of CEQA. The City's suggestion that it will not make documents referenced in the DEIR available for our review until May 22, 2023—the last day to submit comments on the Project—plainly violates CEQA and would preclude any meaningful public review and comment. Therefore, we respectfully request that the City extend the public review and comment period on the DEIR by at least 30 days from the date on which the City releases ***all*** the DEIR reference documents for public review.

Given the short time before the current public review and comment period ends, please contact me as soon as possible with your response to this request, but no later than close of business on **Monday, May 15, 2023**. Thank you for your consideration and prompt response to this request.

Sincerely,



Richard M. Franco

Re: Master Case Number 21-109
Request for Extension of Time to Comment or Otherwise Respond to the Draft EIR
Follow-up on Public Records Request

Joe:

I am following up on two interrelated matters. On April 19, 2023, I transmitted correspondence to you requesting additional time to respond to the EIR for this project. At or about the same time, I also requested specific materials from the city pursuant to the City's on-line public records request. More than 10 days have elapsed since the date of my on-line public records request. There has been no response from the city to either of my requests. Our ability to meaningfully comment on the EIR is compromised by not having the public documents requested. Please confirm two items: 1) whether the request for additional time to respond to the EIR has been granted and if not, why not; and 2) when can we expect to receive the requested documents together with any associated costs. Thank you.

Very truly yours,

ADAMSKI MOROSKI MADDEN

RE: City of Santa Clarita's Shadowbox Studios Project (Master Case 21-109) SCH# 2022030762

Dear Erika Iverson,

On behalf of the Southwest Mountain States Regional Council of Carpenters ("**Southwest Carpenters**" or "**SWMSRCC**"), my Office is submitting these comments for the City of Santa Clarita's ("**City**") May 16, 2023, Planning Commission Meeting for the Shadowbox Studios Project ("**Project**").

The Southwest Carpenters is a labor union representing over 63,000 union carpenters in 10 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of the Southwest Carpenters live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

The Southwest Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Southwest Carpenters incorporates by reference all comments raising issues regarding the Environmental Impact Report (EIR) submitted prior to certification of the EIR for the Project. See *Citizens for Clean Energy v City of Woodland* (2014) 225

Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, the Southwest Carpenters requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using a local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

> [A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

> [L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.[1]

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.[2]

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

> People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.[3]

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and

[2] South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10.

[3] California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf

Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.[4] Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

> In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 ("**AB2011**"). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT'S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several

[4] Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf.

construction sites have been identified as sources of community spread of COVID-19.[5]

Southwest Carpenters recommend that the Lead Agency adopt additional requirements to mitigate public health risks from the Project's construction activities. Southwest Carpenters requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon Southwest Carpenters' experience with safe construction site work practices, Southwest Carpenters recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.

[5] Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx.

- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.[6]

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

Southwest Carpenters has also developed a rigorous Infection Control Risk Assessment ("**ICRA**") training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.[7]

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."[1] CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.[2]

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[3]

[1] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[2] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[3] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled ("VMT") associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.[4]

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

> "$VMT_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$
>
> Where:
>
> n = Number of land uses being modeled."[5]

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

> "$\text{Emissions}_{pollutant} = VMT * EF_{running,pollutant}$
>
> Where:
>
> $\text{Emissions}_{pollutant}$ = emissions from vehicle running for each pollutant
>
> VMT = vehicle miles traveled
>
> $EF_{running,pollutant}$ = emission factor for running emissions."[6]

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[7] In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act ("CEQA") requires that such changes be justified by substantial evidence.[8] The default number of construction-related worker trips is calculated by multiplying the

[4] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14-15.
[5] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.
[6] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.
[7] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.
[8] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.[9] Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively."[10] Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.[11] The operational home-to-work vehicle trip lengths are:

> "[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings" (emphasis added). [12]

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).[13]

Worker Trip Length by Air Basin		
Air Basin	**Rural (miles)**	**Urban (miles)**
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	**16.47**	**11.17**
Minimum	**10.80**	**10.80**
Maximum	**19.80**	**14.70**
Range	**9.00**	**3.90**

[9] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.
[10] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.
[11] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.
[12] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.
[13] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8-miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7-miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan ("Project") located in the City of Claremont ("City"). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.[14] In an effort to evaluate the potential for a local hire provision to reduce the Project's construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO_2e)	3,623
Amortized Construction GHG Emissions (MT CO_2e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO2e)	3,024
Amortized Construction GHG Emissions (MT CO_2e/year)	100.80
% Decrease in Construction-related GHG Emissions	***17%***

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project's urbanization level and location.

[14] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Village South Specific Plan (Proposed)

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Presentations:

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society.* Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution.* Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluoroctanoic Acid (PFOA) and Perfluoroactane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States" Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P**. (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water.* Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The *23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florala, Alabama. *The AEHS Annual Meeting.* Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition.* Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference.* Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference.* Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference.* Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference.* Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants*.. Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conferenc*e. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation.* Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest.* Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al.,, et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant.*
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs,* vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs,* vs. BP Products North America, Inc., *Defendant.*
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Email: mhagemann@swape.com

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Re: Agenda Item #1- May 16, 2023 Planning Commission Hearing on Shadowbox Studios Project (Master Case 21-109)

Dear Chair Berlin, Honorable Planning Commission members, Mr. Crawford and Ms. Iverson:

We are writing on behalf of the Coalition for Responsible Equitable Economic Development Los Angeles ("CREED LA") with respect to the May 17, 2023 Planning Commission Agenda Item #1, the Shadowbox Studios Project (Master Case 21-109) ("Project") proposed by L.A. Railroad 93, LLC ("Applicant"). The Project proposes to develop a full-service film and television studio campus that would consist of approximately 476,000-square feet of sound stages; approximately 571,000-square feet of workshops, warehouses, and support uses; approximately 210,000-square feet of production and administrative offices, and approximately 37,500-square feet of catering and specialty service areas. The approximately 93-acre Project site is generally located at the northeast corner of Railroad Avenue and 13th Street and bounded by 12th Street, Arch Street, and 13th Street on the south; Railroad Avenue on the west; Metropolitan Water District (MWD) right-of-way (ROW) on the east; and HOA maintained slopes associated with adjacent residential uses to the north.

The staff report for the May 16 hearing recommends that the Planning Commission take the following actions: (1) receive the staff presentation in response to Planning Commission direction; (2) continue the public hearing to receive

printed on recycled paper

testimony from the applicant and the public; (3) close the public hearing and provide direction to staff on the hearing schedule; and (4) continue the Project to June 20, 2023. For the reasons set forth below, it is premature for the Planning Commission to act on the Project or to set dates for decisional hearings because the public comment period on the Project's Draft Environmental Impact Report ("DEIR") remains open, and the City must review and respond to comments on the DEIR before moving forward with any Project approval actions. CREED LA respectfully requests that the Planning Commission direct City staff to extend the public comment period for the Project's Draft Environmental Impact Report ("DEIR") and continue the public hearing to a date after the close of public comment on the DEIR.

I. STATEMENT OF INTEREST

CREED LA is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential public and worker health and safety hazards, and the environmental and public service impacts of the Project. The coalition includes the Sheet Metal Workers Local 105, International Brotherhood of Electrical Workers Local 11, Southern California Pipe Trades District Council 16, and District Council of Iron Workers of the State of California, along with their members, their families, and other individuals who live and work in the City of Los Angeles.

Individual members of CREED LA and its member organizations live, work, recreate, and raise their families in the City of Santa Clarita and surrounding communities. Accordingly, they would be directly affected by the Project's environmental and health and safety impacts. Individual members may also work on the Project itself. They will be first in line to be exposed to any health and safety hazards that exist onsite.

In addition, CREED LA has an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for its members. Environmentally detrimental projects can jeopardize future jobs by making it more difficult and more expensive for business and industry to expand in the region, and by making the area less desirable for new businesses and new residents. Continued environmental degradation can, and has, caused construction moratoriums and other restrictions on growth that, in turn, reduce future employment opportunities.

printed on recycled paper

II. THE PLANNING COMMISSION SHOULD CONTINUE THE HEARING AND EXTEND THE PUBLIC COMMENT PERIOD ON THE DEIR DUE TO FAILURE TO COMPLY WITH CEQA

CREED LA is in the process of reviewing the Project's DEIR with its experts and plans to submit legal and technical comments prior to the close of the public comment period, which currently ends on May 22, 2023. Based on our review of the DEIR and available supporting documents, it appears that the DEIR fails to comply with the requirements of the California Environmental Quality Act[1] ("CEQA") as it fails to disclose, analyze and mitigate all of the Project's potentially significant impacts, including impacts on air quality, greenhouse gas emissions, biological resources, noise, and transportation.

Any Planning Commission action on the Project, including the proposed recommendations to close the public hearing and set dates for decisional hearings, is premature at this time because the public comment period on the DEIR remains open. CREED LA and other members of the public have yet to provide substantive comments on the DEIR, and the City must review and address those comments before closing public comment and conducting Project approval hearings.[2] Revision and recirculation of the DEIR may also be required prior to release of a Final EIR and any hearings on the Project.[3] Accordingly, CREED LA respectfully requests that the Planning Commission defer any action on the Project and continue the public hearing to a date after the close of public comment on the DEIR.

In addition, we request that the City extend the public review and comment period for the DEIR on the grounds that the City failed to make available all of the documents referenced in and relied upon by the DEIR during the entire public comment period, in violation of CEQA. We first submitted a request for access to such documents pursuant to CEQA on April 27, 2023.[4] On May 8, the City responded that "you will be contacted on or before May 22, 2023 [i.e., the last day to submit public comments on the DEIR], with the availability of the records responsive and appropriate for disclosure."

[4] April 27, 2023 letter from Sheila Sannadan, Adams Broadwell Joseph & Cardozo to Jason Crawford, Erika Iverson and Mary Cusick re Request for Immediate Access to Documents Referenced or Relied Upon in the Draft Environmental Impact Report-Shadowbox Studios Project.

printed on recycled paper

On May 12, 2023, we requested that the City extend the public comment period as the City had not provided access to all of the DEIR reference documents.[5] We reiterate that request here, and note that there are at least two additional pending requests for an extension of the DEIR comment period.[6] CREED LA's request is made pursuant to CEQA, which requires that "all documents referenced in the draft environmental impact report or negative declaration" be available for review and "readily accessible" during the entire comment period.[7]

Our May 12 request for extension of time included a demand that the City immediately comply with our April 27, 2023 request for immediate access to all documents referenced and incorporated by reference in the DEIR, including but not limited to (1) all documents referenced and incorporated by reference in the DEIR which are not available by weblink; (2) all unlocked native input files for CalEEMod modeling performed for the Project, as referenced in DEIR sections 4.2 and 4.7 and Appendix C; (3) any Excel file(s) prepared by Rincon Consultants, Inc. in connection with its air quality analysis and calculations for the Project; (4) missing documents referenced in DEIR section 4.14 and Appendix L, including Transportation Analysis Updates in Santa Clarita (May 19, 2020), Transportation Analysis Updates in Santa Clarita (June 20, 2023) and the Placerita Meadows EIR Traffic Study; (5) any reports or other documents reflecting an April 27, 2022 site visit by Michael Baker International, as referenced in Appendix D, pg. 18.

Without access to these critical DEIR reference documents during the entire public comment period, CREED LA and other members of the public have been precluded from having a meaningful opportunity to comment on the DEIR as required by CEQA. Without access to these documents, CREED LA and other members of the public have been unable to evaluate the accuracy of the City's impact analysis, or the efficacy of the City's proposed mitigation measures.

CEQA compels a lead agency to make all documents referenced in an environmental impact report "available for review" during the entire public comment period.[8] The courts have held that the failure to provide even a few pages of a CEQA document for a portion of the public review period invalidates the entire CEQA process, and that such a failure must be remedied by permitting additional

printed on recycled paper

public comment.[9] It is also well settled that a CEQA document may not rely on hidden studies or documents that are not provided to the public.[10]

On May 15, 2023, the City produced a number of the DEIR reference documents requested, with only a week remaining in the DEIR public comment period. This belated production deprived CREED LA of timely access to the documents, and does not cure the City's failure to make these documents available during the entire public comment period. By failing to make all documents and underlying data referenced in the DEIR readily available during the entirety of the public comment period, the City has denied CREED LA and members of the public the ability to meaningfully comment on the potentially significant environmental impacts of the Project in violation of CEQA's procedural mandates. Even with the belated document production, the size of the DEIR and the Project's complexity make it difficult to effectively review and comment on the DEIR by the current comment deadline of May 22, 2023. Therefore, we respectfully request that the City extend the public review and comment period on the DEIR to at least June 14, 2023, which is 30 days after the date on which the City released the missing DEIR reference documents for public review.

Finally, we note that CREED LA did not receive formal notice of the May 16, 2023 Planning Commission hearing, despite our express written request for such notice. On April 27, 2023, we sent a letter via email and U.S. Mail to the City Clerk and the Director of Community Development requesting "**mailed notice of any and all hearings, meetings and/or actions related to the Project.** [emphasis in original]"[11] The letter noted that these requests were made pursuant to Public Resources Code Sections 21092.2, 21080.4, 21083.9, 21092, 21108, 21152, and 21167(f), and Government Code Section 65092, which require local agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body. We only learned of the May 16 hearing by chance, in an email by Director Crawford in response to our May 12 letter requesting an extension of the DEIR public comment period. We hereby reiterate our request for mailed and emailed notice of any and all hearings, meetings and/or actions related to the Project.

printed on recycled paper

III. CONCLUSION

For the foregoing reasons, CREED LA requests that the Planning Commission defer any consideration of the Project and the DEIR, extend the DEIR public review and comment period, and continue the public hearing to a date after the close of the public review and comment period.

Thank you for your consideration of these comments.

Sincerely,

Richard M. Franco

Re: Master Case Number 21-109
Renewed Request for Extension of Time to Comment or Otherwise Respond to the Draft EIR

Joe:

Yesterday at approximately 4:55 p.m. City Staff finally provided my firm with an edited response to our Public Records Request of April 19, 2023. It is unrealistic to expect us to be able to review, analyze, and evaluate those documents before this evening's Planning Commission meeting. Our request for additional time to comment on the draft EIR was predicated upon our timely receipt of all the documents we requested in our Public Records Request. As a result, PCPOA renews its request for additional time to comment on the draft EIR. Under these new circumstances, PCPOA requests at least 60 days upon which to comment on the draft EIR. Please provide a copy of this letter to the Planning Commissioners prior to this evening's meeting. Ms. Berlin and the planners are also copied on this letter. Thank you.

Very truly yours,

ADAMSKI MOROSKI MADDEN

Other Letters Submitted During the Draft EIR Comment Period

This section of **Attachment 1** of this Final EIR contains letters that were received by the lead agency but do not provide comments on environmental issues that are germane to CEQA or present specific information or questions regarding the EIR. Many of these letters express support for or opposition to the Project, some provide suggestions and opinions on the merits of the Project or components thereof, and some request consideration by the Planning Commission of their questions. As these comments do not address the adequacy of the Draft EIR, no response is required. However, these letters are included in the record and forwarded to the decision-makers for consideration.

RE: Shadowbox Studios Project

Hello SCV Planning Commission

We write as proud carriers of keychains with the Seal of the City of Santa Clarita symbolic of our history and path to the future. This Seal is also behind you in the Chamber where you meet.

In the middle of our Seal is the mighty oak, representative of our community strength and resilience.

There is no better representation of the heritage oak on the flood plain in the middle of the Shadowbox Studio Project. We ask the Planning Commission to please make sure this beautiful and powerful symbol of our City remains intact, and any planning be around this beautiful oak tree.

Not having an oak tree in our City Seal, whether it be on a keychain or behind the dais, would be detrimental to the symbolism of who we are and whom we represent.

Do not allow this heritage oak tree be threatened or removed as its value to the community is more than symbolic.

Robin Clough and Gene Dorio, M.D.

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

Dear Commissioner,

Please preserve the big Heritage Oak that's located in the middle of the flood plain of the Shadow Box Project. It is not only a beautiful and historic part of the Santa Clarita Valley, but also essential to the health of the environment—reducing air pollution, stabilizing the ground during flooding, and providing an important habitat for endangered species. It would, therefore, be most advantageous to incorporate the Heritage Valley Oak into the project, thus saving it.

(Please forward this message to all the planning commissioners involved)

Thank you.

Sincerely,
Elliot Bronwein

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

To the SCV Planning Commission:

First of all, please distribute this message to all commissioners.

My message: The Shadow Box Studio Project has plans that include destroying the big heritage oak in the middle of the flood plain. This is completely unnecessary. We need all the old-growth trees we can keep alive to help fight climate change, and these old oaks are supposed to be protected in this community! Please require the project to design AROUND the oak and save it.

Thank you!

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

My name is Jeff Secor and we live at 21224 Placerita Canyon Road.

I worked for the City of Los Angeles for 31 years as a Building Maintenance Supervisor. What you are proposing, no pun intended, is going to be a train wreck if implemented.

We have lived in the canyon for 22 years. We thinking leaving that space open for a park would be the best for our community, but the reality is that we know it won't happen.

We see how the Dockweiler project plan owas and is being handled, with no regard to the huge traffic problems that will occur on 13th Street. Instead of taking the road to Market Street, it was all decided beforehand that you never planned to do that. As you know, virtually all of the residents of Placerita Canyon and Dockweiler were opposed to the road project.

The studio project is better than a low cost housing project, but the way these two projects are propose is not going to work. The City of Los Angeles usually doesn't listen to the voice of the communities they do projects in, such as road changes or buildings. The residents would voice their opinions about the impact it would have on their lives, but the city would go ahead anyway with whatever they wanted, many of which turn out disastrously.

We know how these projects will impact our canyon, especially traffic congestion that will be horrific if this project is not modified or scratched.

Politicians and developers want this project and may need to be open to some changes that may cost more money up front. My proposal is that Dockweiler be brought down to Market Street. It will serve the college better for their traffic needs as well.

The 13th Street train entrance should be left and upgraded somewhat, not expanded. The studio should not have access through there. A dedicated entrance and rail

crossing should be made at the extreme end of the property for their entrance and exit only. These can be done, of course, for a cost which I think in the long run will help all the parties impacted by these projects to work together.

Also, the size of the building and layout exceed what needs to be placed there as has been mentioned by other residents of the canyon. You should be listening to the concerns of those who live here, not to outsiders or people that are paid to promote the self interests of others with no regard to the human factor.

Again, the way it stands, this will be a train wreck for everyone involved in this canyon.

Thank you,
Jeff & Sharon Secor

Subject: Shadowbox Studio access

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

The main entrance to the proposed Shadowbox Studio facility should be through a Railroad underpass at the intersection of 15th St. and Railroad Ave.
The topography from 13th St to Placerita Creek support this theory and the precedent has been set with the CPUC for a development in Canyon Country. The rail line can remain in service with a temporary reroute during construction of the overpass.
Extending Dockweiler Dr. into Placerita Cyn. is a very shortsighted and problematic solution.
Dockweiler Dr. should connect to Market St and not create a route to avoid Downtown Newhall.

Re: Newhall Studio Project 21-109 Request for an extension to review the EIR
Please copy to all members of the Planning Commission

Dear Ms. Iverson and Planning Commission Members

SCOPE is a planning and conservation non-profit group now celebrating its 35th year of work in the Santa Clarita Valley.

This project proposes to build a huge industrial development on an area of floodplain currently zoned for housing. It will fundamentally change the character of the Newhall neighborhood and old town district which the City has strived to create and which the City has spent enormous amounts of public funds to promote. It will destroy a number of oaks including the iconic heritage oak located in the middle of this flood plain which is older than the town of Newhall itself.

The EIR was released just prior to the Easter and Passover holidays when many people had their minds on family and religious celebrations and thus may not have been aware of its release. It is also a massive document requiring a great deal of reading and research.

Due to all of these factors and the importance of widespread community involvement on a project that will so dramatically change the character of an existing neighborhood, we request that you extend the comment period to at least 120 days for this document.

It is vitally important that you receive input from a wide variety of community members on this project and that community members have adequate time to provide you with a full array of information to help you make the best decision for our community.

Thank you for your consideration of this matter.

Sincerely,

Lynne Plambeck,

President

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

To the Planning Commission:

Please require the developer for this project to change the plan in order to save the heritage oak and other oaks on this property (12 oaks total). Old growth trees are our best tool for slowing down climate change because they absorb so much CO2 -- far more than newly planted trees, which take about 10 years to even BEGIN absorbing carbon. How can we even *think* of chopping down these magnificent and crucial natural wonders? And for what? Another building?

This project will change the whole character of Old Town Newhall. Please allow more time for review by extending the comment period to 120 days.

Also, please copy this message to all planning commissioners.

Re: Request for Extension of Comment Period for the Draft Environmental Impact Report for Shadowbox Studios Project (Master Case 21-109) and Immediate Access to Reference Documents

Dear Mr. Crawford and Ms. Iverson:

We are writing on behalf of the Coalition for Responsible Equitable Economic Development in Los Angeles (CREED LA) to respectfully request that the City of Santa Clarita ("City") extend by at least 30 days the public review and comment period for the Draft Environmental Impact Report ("DEIR") prepared for the Shadowbox Studios Project (Master Case 21-109) ("Project"), which currently ends on May 22, 2023.

We are requesting an extension due to the City's failure to provide timely access to all documents referenced in the DEIR. We ask that the City immediately comply with our April 27, 2023 request for immediate access to all documents referenced and incorporated by reference in the DEIR, including but not limited to (1) all documents referenced and incorporated by reference in the DEIR which are not available by weblink; (2) all unlocked native input files for CalEEMod modeling performed for the Project, as referenced in DEIR sections 4.2 and 4.7 and Appendix C; (3) any Excel file(s) prepared by Rincon Consultants, Inc. in connection with its

printed on recycled paper

air quality analysis and calculations for the Project; (4) missing documents referenced in DEIR section 4.14 and Appendix L, including Transportation Analysis Updates in Santa Clarita (May 19, 2020), Transportation Analysis Updates in Santa Clarita (June 20, 2023) and the Placerita Meadows EIR Traffic Study; (5) any reports or other documents reflecting an April 27, 2022 site visit by Michael Baker International, as referenced in Appendix D, pg. 18.

On April 27, 2023, our office submitted a request, pursuant to the California Environmental Quality Act ("CEQA"),[1] for immediate access to any and all *documents referenced or relied upon in the Draft Environmental Impact Report*, excluding the DEIR, its appendices and documents available on the City of Santa Clarita website as of that date.[2] CEQA's section 21092(b)(1) and CEQA Guidelines section 15087(c)(5) require that "all documents referenced" and "all documents incorporated by reference" in an environmental impact report shall be "readily accessible to the public during the lead agency's normal working hours" during the entire public comment period.[3]

On May 8, 2023, the City responded that it was "in receipt of your public records request," and that because the request involved numerous separate and distinct records, the City claimed an extension pursuant to Government Code section 7922.535(b) to provide the missing documents. The City stated that "pursuant to the extension provision, you will be contacted on or before May 22, 2023, with the availability of the records responsive and appropriate for disclosure."

As an initial matter, our April 27, 2023 request was made pursuant to the provisions of CEQA, not the California Public Records Act.[4] Therefore, the extension provision cited by the City (Government Code section 7922.535(b)) is inapplicable.

Moreover, CEQA compels a lead agency to make all documents referenced in an environmental impact report "available for review" during the entire public comment period.[5] The courts have held that the failure to provide even a few pages

---

[1] Pub. Resources Code §§ 21000 *et seq*.
[2] Letter to Jason Crawford and Erika Iverson, City of Santa Clarita from Sheila Sannadan, Adams Broadwell Joseph & Cardozo re: Request for Immediate Access to Documents Referenced in the Draft Environmental Impact Report – Shadowbox Studios Project (Master Case 21-109) (April 27, 2023).
[3] Pub. Resources Code § 21092(b)(1); 14 C.C.R. § 15087(c)(5).

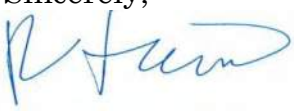
printed on recycled paper

of a CEQA document for a portion of the public review period invalidates the entire CEQA process, and that such a failure must be remedied by permitting additional public comment.[6] It is also well settled that a CEQA document may not rely on hidden studies or documents that are not provided to the public.[7]

By failing to make all documents and underlying data referenced in the DEIR readily available during the entirety of the public comment period, the City is depriving members of the public the ability to meaningfully comment on the potentially significant environmental impacts of the Project and is violating the procedural mandates of CEQA. The City's suggestion that it will not make documents referenced in the DEIR available for our review until May 22, 2023—the last day to submit comments on the Project—plainly violates CEQA and would preclude any meaningful public review and comment. Therefore, we respectfully request that the City extend the public review and comment period on the DEIR by at least 30 days from the date on which the City releases ***all*** the DEIR reference documents for public review.

Given the short time before the current public review and comment period ends, please contact me as soon as possible with your response to this request, but no later than close of business on **Monday, May 15, 2023**. Thank you for your consideration and prompt response to this request.

Sincerely,



Richard M. Franco

Re: Master Case Number 21-109
Request for Extension of Time to Comment or Otherwise Respond to the Draft EIR
Follow-up on Public Records Request

Joe:

I am following up on two interrelated matters. On April 19, 2023, I transmitted correspondence to you requesting additional time to respond to the EIR for this project. At or about the same time, I also requested specific materials from the city pursuant to the City's on-line public records request. More than 10 days have elapsed since the date of my on-line public records request. There has been no response from the city to either of my requests. Our ability to meaningfully comment on the EIR is compromised by not having the public documents requested. Please confirm two items: 1) whether the request for additional time to respond to the EIR has been granted and if not, why not; and 2) when can we expect to receive the requested documents together with any associated costs. Thank you.

Very truly yours,

RE: City of Santa Clarita's Shadowbox Studios Project (Master Case 21-109) SCH# 2022030762

Dear Erika Iverson,

On behalf of the Southwest Mountain States Regional Council of Carpenters ("**Southwest Carpenters**" or "**SWMSRCC**"), my Office is submitting these comments for the City of Santa Clarita's ("**City**") May 16, 2023, Planning Commission Meeting for the Shadowbox Studios Project ("**Project**").

The Southwest Carpenters is a labor union representing over 63,000 union carpenters in 10 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of the Southwest Carpenters live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

The Southwest Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Southwest Carpenters incorporates by reference all comments raising issues regarding the Environmental Impact Report (EIR) submitted prior to certification of the EIR for the Project. See *Citizens for Clean Energy v City of Woodland* (2014) 225

Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, the Southwest Carpenters requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using a local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

> [A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

> [L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.[1]

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.[2]

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

> People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.[3]

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and

---

[1] California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, *available at* https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf.

[2] South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10.

[3] California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf

Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.[4] Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

> In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 ("**AB2011**"). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT'S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several

[4] Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf.

construction sites have been identified as sources of community spread of COVID-19.[5]

Southwest Carpenters recommend that the Lead Agency adopt additional requirements to mitigate public health risks from the Project's construction activities. Southwest Carpenters requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon Southwest Carpenters' experience with safe construction site work practices, Southwest Carpenters recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.

[5] Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx.

- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.[6]

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

Southwest Carpenters has also developed a rigorous Infection Control Risk Assessment ("**ICRA**") training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.[7]

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."[1] CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.[2]

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[3]

[1] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[2] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[3] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled ("VMT") associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.[4]

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

> "$VMT_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$
>
> Where:
>
> n = Number of land uses being modeled."[5]

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

> "$\text{Emissions}_{pollutant} = VMT * EF_{running,pollutant}$
>
> Where:
>
> $\text{Emissions}_{pollutant}$ = emissions from vehicle running for each pollutant
>
> VMT = vehicle miles traveled
>
> $EF_{running,pollutant}$ = emission factor for running emissions."[6]

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[7] In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act ("CEQA") requires that such changes be justified by substantial evidence.[8] The default number of construction-related worker trips is calculated by multiplying the

[5] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.
[6] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.
[7] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.
[8] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.[9] Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively."[10] Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.[11] The operational home-to-work vehicle trip lengths are:

> "[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings" (emphasis added). [12]

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).[13]

Worker Trip Length by Air Basin		
Air Basin	**Rural (miles)**	**Urban (miles)**
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	**16.47**	**11.17**
Minimum	**10.80**	**10.80**
Maximum	**19.80**	**14.70**
Range	**9.00**	**3.90**

[9] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

[11] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.
[12] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.
[13] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8-miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7-miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan ("Project") located in the City of Claremont ("City"). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.[14] In an effort to evaluate the potential for a local hire provision to reduce the Project's construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO_2e)	3,623
Amortized Construction GHG Emissions (MT CO_2e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO2e)	3,024
Amortized Construction GHG Emissions (MT CO_2e/year)	100.80
% Decrease in Construction-related GHG Emissions	***17%***

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project's urbanization level and location.

[14] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Village South Specific Plan (Proposed)

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference.* Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference.* Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference.* Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference.* Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants*.. Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conferenc*e. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation.* Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest.* Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell.* Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al.,, et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant.*
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs,* vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs,* vs. BP Products North America, Inc., *Defendant.*
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal repesentatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.

Hagemann, M.F., and VanMouwerik, M., 1999. Potential Water Quality Concerns Related to Snowmobile Usage. Water Resources Division, National Park Service, Technical Report.

VanMouwerik, M. and **Hagemann, M.F**. 1999, Water Quality Concerns Related to Personal Watercraft Usage. Water Resources Division, National Park Service, Technical Report.

Hagemann, M.F., 1999, Is Dilution the Solution to Pollution in National Parks? The George Wright Society Biannual Meeting, Asheville, North Carolina.

Hagemann, M.F., 1997, The Potential for MTBE to Contaminate Groundwater. U.S. EPA Superfund Groundwater Technical Forum Annual Meeting, Las Vegas, Nevada.

Hagemann, M.F., and Gill, M., 1996, Impediments to Intrinsic Remediation, Moffett Field Naval Air Station, Conference on Intrinsic Remediation of Chlorinated Hydrocarbons, Salt Lake City.

Hagemann, M.F., Fukunaga, G.L., 1996, The Vulnerability of Groundwater to Anthropogenic Contaminants on the Island of Maui, Hawaii. Hawaii Water Works Association Annual Meeting, Maui, October 1996.

Hagemann, M. F., Fukanaga, G. L., 1996, Ranking Groundwater Vulnerability in Central Oahu, Hawaii. Proceedings, Geographic Information Systems in Environmental Resources Management, Air and Waste Management Association Publication VIP-61.

Hagemann, M.F., 1994. Groundwater Characterization and Cleanup at Closing Military Bases in California. Proceedings, California Groundwater Resources Association Meeting.

Hagemann, M.F. and Sabol, M.A., 1993. Role of the U.S. EPA in the High Plains States Groundwater Recharge Demonstration Program. Proceedings, Sixth Biennial Symposium on the Artificial Recharge of Groundwater.

Hagemann, M.F., 1993. U.S. EPA Policy on the Technical Impracticability of the Cleanup of DNAPL-contaminated Groundwater. California Groundwater Resources Association Meeting.

Hagemann, M.F., 1992. Dense Nonaqueous Phase Liquid Contamination of Groundwater: An Ounce of Prevention... Proceedings, Association of Engineering Geologists Annual Meeting, v. 35.

Other Experience:

Selected as subject matter expert for the California Professional Geologist licensing examination, 2009-2011.

Re: Agenda Item #1- May 16, 2023 Planning Commission Hearing on Shadowbox Studios Project (Master Case 21-109)

Dear Chair Berlin, Honorable Planning Commission members, Mr. Crawford and Ms. Iverson:

We are writing on behalf of the Coalition for Responsible Equitable Economic Development Los Angeles ("CREED LA") with respect to the May 17, 2023 Planning Commission Agenda Item #1, the Shadowbox Studios Project (Master Case 21-109) ("Project") proposed by L.A. Railroad 93, LLC ("Applicant"). The Project proposes to develop a full-service film and television studio campus that would consist of approximately 476,000-square feet of sound stages; approximately 571,000-square feet of workshops, warehouses, and support uses; approximately 210,000-square feet of production and administrative offices, and approximately 37,500-square feet of catering and specialty service areas. The approximately 93-acre Project site is generally located at the northeast corner of Railroad Avenue and 13th Street and bounded by 12th Street, Arch Street, and 13th Street on the south; Railroad Avenue on the west; Metropolitan Water District (MWD) right-of-way (ROW) on the east; and HOA maintained slopes associated with adjacent residential uses to the north.

The staff report for the May 16 hearing recommends that the Planning Commission take the following actions: (1) receive the staff presentation in response to Planning Commission direction; (2) continue the public hearing to receive

printed on recycled paper

testimony from the applicant and the public; (3) close the public hearing and provide direction to staff on the hearing schedule; and (4) continue the Project to June 20, 2023. For the reasons set forth below, it is premature for the Planning Commission to act on the Project or to set dates for decisional hearings because the public comment period on the Project's Draft Environmental Impact Report ("DEIR") remains open, and the City must review and respond to comments on the DEIR before moving forward with any Project approval actions. CREED LA respectfully requests that the Planning Commission direct City staff to extend the public comment period for the Project's Draft Environmental Impact Report ("DEIR") and continue the public hearing to a date after the close of public comment on the DEIR.

I. STATEMENT OF INTEREST

CREED LA is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential public and worker health and safety hazards, and the environmental and public service impacts of the Project. The coalition includes the Sheet Metal Workers Local 105, International Brotherhood of Electrical Workers Local 11, Southern California Pipe Trades District Council 16, and District Council of Iron Workers of the State of California, along with their members, their families, and other individuals who live and work in the City of Los Angeles.

Individual members of CREED LA and its member organizations live, work, recreate, and raise their families in the City of Santa Clarita and surrounding communities. Accordingly, they would be directly affected by the Project's environmental and health and safety impacts. Individual members may also work on the Project itself. They will be first in line to be exposed to any health and safety hazards that exist onsite.

In addition, CREED LA has an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for its members. Environmentally detrimental projects can jeopardize future jobs by making it more difficult and more expensive for business and industry to expand in the region, and by making the area less desirable for new businesses and new residents. Continued environmental degradation can, and has, caused construction moratoriums and other restrictions on growth that, in turn, reduce future employment opportunities.

printed on recycled paper

II. THE PLANNING COMMISSION SHOULD CONTINUE THE HEARING AND EXTEND THE PUBLIC COMMENT PERIOD ON THE DEIR DUE TO FAILURE TO COMPLY WITH CEQA

CREED LA is in the process of reviewing the Project's DEIR with its experts and plans to submit legal and technical comments prior to the close of the public comment period, which currently ends on May 22, 2023. Based on our review of the DEIR and available supporting documents, it appears that the DEIR fails to comply with the requirements of the California Environmental Quality Act[1] ("CEQA") as it fails to disclose, analyze and mitigate all of the Project's potentially significant impacts, including impacts on air quality, greenhouse gas emissions, biological resources, noise, and transportation.

Any Planning Commission action on the Project, including the proposed recommendations to close the public hearing and set dates for decisional hearings, is premature at this time because the public comment period on the DEIR remains open. CREED LA and other members of the public have yet to provide substantive comments on the DEIR, and the City must review and address those comments before closing public comment and conducting Project approval hearings.[2] Revision and recirculation of the DEIR may also be required prior to release of a Final EIR and any hearings on the Project.[3] Accordingly, CREED LA respectfully requests that the Planning Commission defer any action on the Project and continue the public hearing to a date after the close of public comment on the DEIR.

In addition, we request that the City extend the public review and comment period for the DEIR on the grounds that the City failed to make available all of the documents referenced in and relied upon by the DEIR during the entire public comment period, in violation of CEQA. We first submitted a request for access to such documents pursuant to CEQA on April 27, 2023.[4] On May 8, the City responded that "you will be contacted on or before May 22, 2023 [i.e., the last day to submit public comments on the DEIR], with the availability of the records responsive and appropriate for disclosure."

[4] April 27, 2023 letter from Sheila Sannadan, Adams Broadwell Joseph & Cardozo to Jason Crawford, Erika Iverson and Mary Cusick re Request for Immediate Access to Documents Referenced or Relied Upon in the Draft Environmental Impact Report-Shadowbox Studios Project.

printed on recycled paper

On May 12, 2023, we requested that the City extend the public comment period as the City had not provided access to all of the DEIR reference documents.[5] We reiterate that request here, and note that there are at least two additional pending requests for an extension of the DEIR comment period.[6] CREED LA's request is made pursuant to CEQA, which requires that "all documents referenced in the draft environmental impact report or negative declaration" be available for review and "readily accessible" during the entire comment period.[7]

Our May 12 request for extension of time included a demand that the City immediately comply with our April 27, 2023 request for immediate access to all documents referenced and incorporated by reference in the DEIR, including but not limited to (1) all documents referenced and incorporated by reference in the DEIR which are not available by weblink; (2) all unlocked native input files for CalEEMod modeling performed for the Project, as referenced in DEIR sections 4.2 and 4.7 and Appendix C; (3) any Excel file(s) prepared by Rincon Consultants, Inc. in connection with its air quality analysis and calculations for the Project; (4) missing documents referenced in DEIR section 4.14 and Appendix L, including Transportation Analysis Updates in Santa Clarita (May 19, 2020), Transportation Analysis Updates in Santa Clarita (June 20, 2023) and the Placerita Meadows EIR Traffic Study; (5) any reports or other documents reflecting an April 27, 2022 site visit by Michael Baker International, as referenced in Appendix D, pg. 18.

Without access to these critical DEIR reference documents during the entire public comment period, CREED LA and other members of the public have been precluded from having a meaningful opportunity to comment on the DEIR as required by CEQA. Without access to these documents, CREED LA and other members of the public have been unable to evaluate the accuracy of the City's impact analysis, or the efficacy of the City's proposed mitigation measures.

CEQA compels a lead agency to make all documents referenced in an environmental impact report "available for review" during the entire public comment period.[8] The courts have held that the failure to provide even a few pages of a CEQA document for a portion of the public review period invalidates the entire CEQA process, and that such a failure must be remedied by permitting additional

printed on recycled paper

public comment.[9] It is also well settled that a CEQA document may not rely on hidden studies or documents that are not provided to the public.[10]

On May 15, 2023, the City produced a number of the DEIR reference documents requested, with only a week remaining in the DEIR public comment period. This belated production deprived CREED LA of timely access to the documents, and does not cure the City's failure to make these documents available during the entire public comment period. By failing to make all documents and underlying data referenced in the DEIR readily available during the entirety of the public comment period, the City has denied CREED LA and members of the public the ability to meaningfully comment on the potentially significant environmental impacts of the Project in violation of CEQA's procedural mandates. Even with the belated document production, the size of the DEIR and the Project's complexity make it difficult to effectively review and comment on the DEIR by the current comment deadline of May 22, 2023. Therefore, we respectfully request that the City extend the public review and comment period on the DEIR to at least June 14, 2023, which is 30 days after the date on which the City released the missing DEIR reference documents for public review.

Finally, we note that CREED LA did not receive formal notice of the May 16, 2023 Planning Commission hearing, despite our express written request for such notice. On April 27, 2023, we sent a letter via email and U.S. Mail to the City Clerk and the Director of Community Development requesting "**mailed notice of any and all hearings, meetings and/or actions related to the Project.** [emphasis in original]"[11] The letter noted that these requests were made pursuant to Public Resources Code Sections 21092.2, 21080.4, 21083.9, 21092, 21108, 21152, and 21167(f), and Government Code Section 65092, which require local agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body. We only learned of the May 16 hearing by chance, in an email by Director Crawford in response to our May 12 letter requesting an extension of the DEIR public comment period. We hereby reiterate our request for mailed and emailed notice of any and all hearings, meetings and/or actions related to the Project.

III. CONCLUSION

For the foregoing reasons, CREED LA requests that the Planning Commission defer any consideration of the Project and the DEIR, extend the DEIR public review and comment period, and continue the public hearing to a date after the close of the public review and comment period.

Thank you for your consideration of these comments.

Sincerely,

Richard M. Franco

Re: Master Case Number 21-109
Renewed Request for Extension of Time to Comment or Otherwise Respond to the Draft EIR

Joe:

Yesterday at approximately 4:55 p.m. City Staff finally provided my firm with an edited response to our Public Records Request of April 19, 2023. It is unrealistic to expect us to be able to review, analyze, and evaluate those documents before this evening's Planning Commission meeting. Our request for additional time to comment on the draft EIR was predicated upon our timely receipt of all the documents we requested in our Public Records Request. As a result, PCPOA renews its request for additional time to comment on the draft EIR. Under these new circumstances, PCPOA requests at least 60 days upon which to comment on the draft EIR. Please provide a copy of this letter to the Planning Commissioners prior to this evening's meeting. Ms. Berlin and the planners are also copied on this letter. Thank you.

Very truly yours,

ADAMSKI MOROSKI MADDEN
CUMBERLAND & GREEN LLP

Subject: Blackhall Studios Private Rail Crossing

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

Dear Mr. Perry,

As a 25 year resident and homeowner of Placerita Canyon, I would like to go on record as stating that while I am not in disagreement to the Shadowbox Studio Development as a whole, I take exception to the added dangers posed for the residents and families of Placerita Canyon, due to the lack of additional means of ingress and egress to the proposed site. If a condition of development was a "Private" Truck Crossing and Entrance at 15th I would bet the applicant would figure out a way to do it.
I wrote my letter (attached) to last year to METRO / SCRRA and they responded to me two days later (also attached). The one comment that stands out in their response is "*As you have mentioned, the City of Santa Clarita had originally identified and led efforts to improve the 13th Street crossing. This effort has now been taken over by Shadowbox Studios*".
I do not recall the Planning Commission being told that the applicant was "In Charge" of designing their own crossing. I guess that will make them ultimately responsible for any design deficiencies too?

I have attached the SCRRA's Appendix H "Guidelines for Design of At Grade Crossings" that I would like added to the comments for the DEIR for Shadow Box Studios in its entirety and for the record. I have also attached my letter to the METRO / SCRRA, dated 10/11/2022, their response (dated 10/14/2022 and would like those to added to the DEIR comments, for the record.
It is amazing that the individuals in charge of the 13th Street crossing are entitled to modify the Design Criteria, at will, and yet have "No Knowledge" of other sections of it.
Funny how that works.

Thanks,

RE: **13th Street Highway-Rail Crossing (CPUC No. 101VY-30.39, DOT No. 746016J) in the City of Santa Clarita, County of Los Angeles**
(AKA: The Lyons Avenue/Dockweiler Drive Extension Project
State Clearinghouse No. 2013082016)

Dear Sirs,

I contacted the SCRRA back in 2018 and 2020 with my concerns regarding the At-Grade Crossing in the Santa Clarita Valley, known as the 13th Street Highway-Rail Crossing, for both the increase in traffic as well as the inability of any expanded crossing ever being able to comply with *SCRRA Highway-Rail Grade Crossings Recommended Design Practices and Standards Manual (SCRRA Manual)*.

My concerns at that time were based on the 2nd phase of the road design for the segmented Dockweiler Drive Extension project, that would cross the SCRRA Right of Way at 13th Street, aka CPUC No. 101VY-30.39, DOT No. 746016J.

In reviewing the requirements for an At-Grade Crossing in the *SCRRA Manual* it became very clear that the 13th street crossing could never comply with the recommended design criteria, due to the limiting 50' horizontal setback from Railroad Ave. Even though the city is reportedly raising the road height to limit the vertical offset it can never meet the goals of the Manual for 1% off the tracks and refuge area.

The intent of this letter is not to address past decisions, but rather inquire as to the possibility of perhaps making another concession to the required design in order to make the crossing far safer for the general public.

The previous builder of the residential development, that was in the process of obtaining their entitlements, sold out to a developer of Movie Studios. This developer, "Shadowbox", is well funded and seems intent on moving forward with the project. The scale of this proposed project is the same as Warner Brothers Studios in Burbank. That 62 acre studio has the luxury of having street frontage on three sides and NINE separate entrances.

The Shadowbox Studio Project is approximately 70 +- acres with TWO entrances (The project claims three) with frontage on 2 streets. These entrances are separated by less than ¼ mile and will be serviced by the 13th Street At-Grade Crossing. The secondary highway to this lot will be down a steep road known as Dockweiler Drive, that has a 7 ½% grade on the first segment of the Segmented Project, and thus will be the second choice of travel for the 40' and 53' semi-trucks transporting movie props to the studio daily.

In addition to this proposed studio project, there are numerous churches, a 3,500 student college and just recently a daycare center and 9 acres were purchased for a private high school. On top of that there is another private movie studio and the Compass Blueprint Project that was approved as part of the General Plan and allows for 750 additional dwelling units. This is all on top of the existing 450+- SFR's that are existing in the canyon.

This leads me to the purpose of this letter.

Section 3.1.2 in the *SCRRA Highway-Rail Grade Crossings Recommended Design Practices and Standards Manual* speaks about Private Highway-Rail Grade Crossings in which the crossing is owned or controlled by a private party, and not a highway agency.

It goes on to state that " *Private highway-rail grade crossings are" "at driveways to private property, and in many cases are used by the general public essentially in the same manner as a public crossing. "In many cases, the SCRRA, or the member agency, provides access to private property under an agreement between the property owner and the SCRRA or SCRRA member agency."*

My question is quite simple really.

Is it or could it be remotely possible for Shadowbox Studios to apply for and construct a coordinated private At-Grade Crossing at or about 15th street that serviced the entrance to the studio lot. The traffic volume across would remain the same but prevent the co-mingling of the semi-trucks and commuter traffic.

If that private entrance / crossing were to move north to 15th Street or further, it would allow more efficient queuing of the studio's traffic at their 15th Street entrance while allowing a less restricted and safer commuter traffic flow at 13th Street. As the ROW moves north, the horizontal setback from Railroad also increases, allowing for a larger refuge area that the 40' and 53' trailers require.

In addition to everything else called out above, this proposed 15th Street Private Crossing would be an additional Emergency Egress Point. It would enable the evacuation of thousands of individuals, in an emergency situation that precluded evacuation to the east. One such Santa Ana fire event that occurred on August 28, 1962 burnt Gene Autrey's Melody Ranch Studio, at the other end of Placerita Canyon, to the ground.

The local property owners of Placerita Canyon are still extremely concerned that the accumulated residential, commercial, student and commuter traffic crossing the proposed Dockweiler / 13th Street At-Grade Crossing will present a significant danger to current and future Santa Clarita residents and we urge you to consider this proposal. This is a crossing that perhaps warrants some creative thinking if it is going to be allowed.

Please feel free to contact me with any questions or hard copy backup,

Sincerely,

Eugene D. Nelson

Mr. Nelson,

Thank you for your email, I had not received the hard copy letter dated October 11th. I appreciate your continued concern for safety at the 13th Street at-grade crossing on Metrolink's Antelope Valley Line. As you have mentioned, the City of Santa Clarita had originally identified and led efforts to improve the 13th Street crossing. This effort has now been taken over by Shadowbox Studios. SCRRA is not leading this project and has limited input into the creation of a new at-grade crossing. I recommend that you contact the City of Santa Clarita with your concerns, if you haven't already. In addition, I understand that the studio project still needs to complete the environmental review and approval process and that there should be an opportunity for you to provide your concerns during the public comment period of that environmental review process.

SCRRA will consider your comments regarding the 13th Street crossing when reviewing any improvements proposed by the developer.

Thanks,

METROLINK.

Subject: [EXTERNAL] 13th Street Highway-Rail Crossing (CPUC No. 101VY-30.39, DOT No. 746016J

EXTERNAL: This email message was sent from outside our organization. Proceed with caution when opening links or attachments. Submit as spam if you are not sure it is safe.

Dear Sirs,

I am writing to you to further inquire as to the status of the At-Grade Crossing known as 13th street (CPUC #101VY-30.39 DOT # 746016J) from the SCRRA / Metro and the PUC.

Recent major events, as further described in the attached letter, may necessitate revisiting your opinion of this crossing.

I would be happy to forward any backup that you may require on the subject or discuss at your convenience.

Thanks,

E.D. (Del) Nelson

1.0 INTRODUCTION

1.1 BACKGROUND

SCRRA (aka Metrolink) is a five-county joint powers authority, created pursuant to California Public Utilities Code Section 130255 and California Government Code Section 6500 et seq., to plan, design, construct, and then maintain and administer the operation of the regional passenger rail lines serving the counties of Los Angeles, Orange, Riverside, San Bernardino, and Ventura.

The five-county SCRRA member agencies are comprised of the following: Los Angeles County Metropolitan Transportation Authority ("METRO"); Ventura County Transportation Commission ("VCTC"); Orange County Transportation Authority ("OCTA"); San Bernardino Associated Governments ("SANBAG"); and Riverside County Transportation Commission ("RCTC"). SCRRA plans, designs, builds, operates, and maintains a commuter rail system in the five-county area on rail rights-of-way owned by the member agencies. Two major freight rail carriers, BNSF and UPRR, and the inter-city passenger carrier Amtrak, operate on SCRRA tracks through shared track agreements; SCRRA in turn operates on tracks owned by BNSF, UPRR, and North County Transit District (NCTD).

SCRRA's service territory is located in the Southern California metropolitan region. The operating environment can be typically categorized as urban and suburban, with some limited rural or undeveloped regions. SCRRA trains operate over 464 highway-rail grade crossings; of these, SCRRA is jointly responsible, with the applicable highway agency, for managing the design, construction, operation, and maintenance of over 312 highway-rail grade and pedestrian-rail grade crossings.

Changes and modifications to SCRRA's existing and any proposed new highway-rail grade crossings are subject to the regulations and approval of the California Public Utilities Commission (CPUC) and also certain provisions of Federal Railroad Administration (FRA) regulations. Most SCRRA highway-rail grade crossings are operated under relatively dense (> 50 daily) mixed commuter, freight, and inter-city passenger train traffic, with relatively high levels of motor vehicle, pedestrian, and bicycle traffic.

A large proportion of SCRRA highway-rail grade crossings feature multiple tracks and vehicle lanes. Table 1-1 summarizes the categories of highway-rail grade crossings over which SCRRA operates. (More detailed information regarding the characteristics of SCRRA's service patterns and service territory are provided in Appendix A).

TABLE 1-1 Summary of SCRRA Highway-Rail Grade Crossings

Crossing Type	Owner and/or Operator/Maintenance Responsibility			
	Metrolink	**BNSF**	**UPRR**	**NCTD**
Public Highway	255	64	66	3
Public Pedestrian	10	2	0	0
Private Highway	29	1	5	0
Private Pedestrian	0	0	0	0
Station Pedestrian	18	3	8	0
Total	**312**	**70**	**79**	**3**

1.2 PURPOSE AND USE OF THE MANUAL

The large number of SCRRA highway-rail grade crossings, combined with high and increasing levels of train, motorized vehicle, and pedestrian traffic, has driven the need for SCRRA to develop a new, comprehensive single document that incorporates current and applicable highway-rail and pedestrian-rail grade crossing design standards and recommended design practices. This document has been titled the "SCRRA Highway-Rail Grade Crossing Recommended Design Practices and Standards Manual", or the "Manual" for short. This new Manual addresses many of the unique and complex planning, design, construction, maintenance and operational challenges associated with highway–rail grade crossings located on the SCRRA's Regional commuter rail network.

In this Manual, the term "highway-rail grade crossing" shall have the same meaning as rail-grade crossing, rail crossing, at-grade crossings, or crossing. The term "highway" will be used to mean roadway, road, street, or approach road, including medians, lighting, fencing, landscaping, sidewalks, traffic signs, traffic signals, traffic striping and all other highway improvements. The term "highway agency" shall mean the owner or owners of the highway including the property, easements, licenses, and all highway improvements. The "highway agency" will typically be a local municipality (a City), a County, the State, or in the case of a private crossing, a private party. The term "railroad" shall mean the SCRRA.

One challenging aspect of highway-rail grade crossing design, particularly in urban metropolitan areas, is that highway-rail grade crossings must typically be designed to allow for the safe and efficient mobility of three entirely different and conflicting modes of mobility: 1) the train; 2) the motor vehicle; and 3) non-motor vehicle pedestrians and bicycles. Adding to the uniqueness and complexity associated with highway-rail grade crossings is that the jurisdiction for the planning, design, maintenance and operations of highway-rail grade crossings is jointly controlled by at least two, and in some cases as many as four or five, owner/operators, and many other stakeholders.

Another contributing factor of complexity is that most SCRRA highway-rail grade crossings have experienced significant train, motor vehicle and pedestrian traffic growth, especially in the last two decades, and have high levels of traffic for all modes. National and regional Southern California studies have indicated that the combined vehicle and train use of most highway-rail grade crossings has increased by a factor of 2.5 over the past two decades, and this growth is anticipated to continue.

© Copyright 2009, SCRRA. All Rights Reserved

A final factor contributing to the challenges associated with operating highway-rail grade crossings is that a significant number of highway-rail grade crossings, as well as highway and pedestrian approaches, are due, or will soon be due, for a cycle of major rehabilitation and renewal (R&R). These R&R programs typically occur every 15 to 30 years and keep highway-rail grade crossings current with traffic growth, design practices, technological improvements, and changes in regulations. For all the reasons stated above, a new and improved Manual was developed.

The primary purpose of the new Manual is to educate its user on the improved guidelines, practices, procedures, and policies that reflect current regulations, proven and accepted technological developments, and best available highway and rail industry design practices. Secondarily, the Manual user will apply these standards and recommended design practices to SCRRA highway-rail grade crossings.

Applying the standards and recommend design practices in this Manual will enhance the safety and efficiency of the highway-rail grade crossing and result in a highway-rail crossing that reflects “best practices” on a national basis. However, when considering the standards and recommended design practices in this Manual, any design team must exercise sound judgment and take into consideration the particular and unique conditions that may exist at a location.

For example (and as stated above), many highway-rail grade crossings and the associated highway and pedestrian approaches have not been significantly rehabilitated or renewed for two or three decades and often include design, right-of-way and operational characteristics that have evolved over several years. Such highway-rail crossings and approaches may not conform fully to current practices and standards as a result. This new Manual provides general guidance on how to enhance the safety and operations of a highway-rail grade crossing, in a relatively cost-effective manner and with minimal right-of-way impact, while providing a design team the flexibility necessary to meet site-specific and special “legacy” circumstances found at many crossings.

The new Manual will be used when significant changes and modifications are proposed to the 300-plus existing SCRRA highway-rail and pedestrian grade crossings and the approaches thereto. Another application of this Manual may arise when new SCRRA service is proposed and changes and modifications to existing highway-rail grade crossings may be warranted. Examples of new SCRRA service include start-up of commuter rail service on the Perris Valley Line or Redlands Branch.

A less frequent application of the Manual will occur when temporary (12 to 36 month) or permanent relocations are required of existing SCRRA highway-rail grade crossings. These relocations are most often associated with the construction of a new grade separation, railroad line change, or other similar major construction project. A very infrequent use anticipated for this Manual would be for any new highway-rail grade crossings. Any new highway-rail grade crossings are strongly discouraged by not only the SCRRA but by the CPUC and FRA and other State and Federal Agencies. New crossings typically require the closure of one or more nearby existing highway-rail grade crossings (refer to Section 1.3).

In conjunction with developing this Manual and compiling “recommended design practices and standards”, a thorough review was made of current standards, manuals, regulations, handbooks and other documents available from other highway agencies and

© Copyright 2009, SCRRA. All Rights Reserved

private sector railroads. A nation-wide literature search was made of highway-rail grade crossing design practices, and site inspections were conducted of pubic agency and private railroads in both Southern and Northern California and on several large Northeastern Commuter Railroads to determine “best design practices and standards ” and application of new but proven technologies.

The costs of implementing the safety enhancements included within this Manual may be 50% to 100% higher than the Manual user has experienced in past grade highway-rail grade crossing improvement project and programs. The significant increase in costs may be due, in part, to the long time span since the last significant highway-rail grade crossing and highway approach improvement project was performed and the resulting backlog of required changes. The application of more costly and complex recommended design practices and new technologies such as exit gates and advanced preemption also contribute to increased costs.

A recent Orange County program involving nearly 50 highway-rail grade crossings resulted in costs ranging from an average of $1.5 million to $2.5 million per crossing. In some cases numerous minor right–of-way acquisitions (sliver or small takes less than 1,000 square feet) were also required.

Typical safety enhancements in the Orange County Program included: extended and widened center medians; improved sidewalks; improved highway approach geometry; four-quadrant pedestrian gates and flashers; exit gates; pre-signals; queue-cutter signals; vehicle traffic signal system interconnections with simultaneous and advanced preemption; and reconstructed and lengthened highway-rail grade crossing surfaces.

In addition to meeting or exceeding the recommended design practices and standards in an interim version of this Manual, the Orange County program included an option to allow local cities to apply for the crossings to be converted to a “quiet zone”, but only after all the interim Manual’s recommendations had been included in the program and placed in-service, and the relevant Federal Quiet Zone application and approval process had been completed.

1.3 MANUAL LIMITATIONS AND DISCLAIMERS

This Manual is not a textbook, nor a substitute for engineering knowledge, experience, or judgment. This Manual provides specialized guidelines, standard drawings, recommended design practices, procedures, and policies including graphs, tables, flowcharts, and associated “design aids” not ordinarily contained in many reference documents or textbooks. Some of these “design aids” are provided to facilitate solutions to a particular aspect of highway-rail grade crossing design. Sound judgment by experienced highway-rail grade crossing engineers and designers working as part of a multi-disciplinary and multi-agency design team must be exercised in the application of the Manual provisions to specific circumstances.

This Manual summarizes and outlines guidelines, recommended design practices and standards, procedures, and policies that have been developed to increase highway-rail grade crossing safety through treatments that generally reduce hazards and risks, while still maintaining sufficient functionality for the motorized vehicle, non-motorized pedestrian and bicycle, and train operations. These recommended design practices and standards have been adopted to facilitate and promote uniformity and consistency to the

© Copyright 2009, SCRRA. All Rights Reserved

design of SCRRA highway-rail grade crossing modifications. SCRRA assumes no liability for the use of information contained in this Manual. It is not intended that any standard of conduct or duty toward the public shall be created or imposed by the use of the Manual. SCRRA does not warrant the accuracy or completeness of this Manual or that the Manual does not contain errors and omissions. The Manual user shall independently validate and verify the information in the Manual and promptly notify SCRRA of any discrepancies or inconsistencies discovered in the course of utilizing this Manual.

Except for new developments, no attempt is made to detail basic engineering techniques; for these, existing design manuals (as provided in the Reference Standards list) and applicable engineering textbooks should be used. For routine design processes and procedures, the Manual's recommended design practices and standards should be intuitive. The contents of this Manual do not preclude use of different methods when special or highly atypical conditions arise, and when approval (through the design exception process) is requested and approved. In any event, all highway-rail grade crossing designs under the jurisdiction of SCRRA must be approved by SCRRA as well as the local highway agency owner of the highway-rail grade crossing and highway approaches. Additionally, all highway-rail grade crossing designs must comply with all applicable CPUC, FRA, and Manual on Uniform Traffic Control Devices (MUTCD) regulatory requirements.

It is not intended that all the recommended design practices and standards included in this Manual be applied retroactively to minor physical or operational changes or to routine maintenance upgrades to existing crossings and highway approaches, as this would not be warranted or economically feasible.

It is intended that the recommended design practices and standards in this Manual be applied when significant physical or operational changes have occurred or are proposed, applicable regulatory approval has been received, realistic scopes and estimates have been developed, the required funding has been obtained, and there is an agreement on the scope, cost, schedule, responsibility and delivery of the proposed changes with the principal highway-rail grade crossing stakeholders.

In most cases, the primary responsibility for funding highway-rail grade crossing safety and operational changes does not reside with the SCRRA, but with the highway agency that owns and maintains the approach highways and pedestrian paths. In many cases, grade crossing safety enhancements are funded by applicable State and Federal grants funding. The SCRRA or SCRRA member agencies may elect to participate in funding improvements for a highway-rail grade crossing on a case-by-case basis or as part of a corridor-wide program.

The designs applied to any proposed highway-rail grade crossing modification or new highway-rail grade crossing should, to the maximum extent feasible, equal or exceed the recommended design practices and standards provided in the Manual. When considering changes and modifications to existing highway-rail grade crossings or if a new grade highway-rail grade crossing is proposed, the highest priority should be given first to treatments resulting in safety improvements and hazard reduction. After safety enhancements and hazard reductions are prioritized, appropriate consideration should then be equally given to: 1) availability of funding; 2) project costs—both the initial and the recurring operation and maintenance costs; 3) vehicular/pedestrian and train

© Copyright 2009, SCRRA. All Rights Reserved

throughput, capacity, and operation; 4) short, mid-term, and long term maintenance impacts; 5) socio-economic and environmental impacts, especially those associated with noise (primarily locomotive horn blowing, but also warning bells)and the implementation of "quiet zones" by local highway agencies; and 6) right-of-way acquisitions.

In some cases, the recommended design practices and standards are subject to amendment as conditions and experience seems to warrant. Special situations may call for variation from the recommended design practices, standards, policies and procedures, subject to SCRRA and CPUC or FRA approval, or such other approval as may be specifically provided for in the Manual. A process for requesting deviations from the recommended design practices and standards has been provided.

SCRRA advises the user to completely review the entire Manual and develop a thorough level of understanding prior to beginning a project or study involving the design, assessment, or diagnostic evaluation of a SCRRA highway-rail grade crossing.

Due to the complexity of intersecting train, vehicle, and pedestrian traffic, combined with relatively high traffic and train volumes and the multi-jurisdictional ownership associated with most SCRRA highway-rail grade crossings, SCRRA strongly recommends a "lead Engineer" or "lead Designer" be designated and placed in "responsible charge" of the inter-disciplinary team involved with any highway-rail grade crossing modification. The lead Engineer shall be a registered California Civil or Traffic Engineer, and have at least five (5) years of recent experience associated with California highway-rail grade crossings.

Ideally, the lead Engineer or Designer, supported by the interdisciplinary and inter-agency design team, should have a good understanding of, and significant experience with, all aspects of the design, construction, operation, and maintenance of highways and streets, traffic signals, railroad track, and railroad active warning devices, as well as being very familiar with applicable CPUC, MUTCD and FRA regulations. Additionally, the lead Engineer's or Designer's experience should include significant exposure to the diagnostic processes, safety certification and hazard analyses, inter-disciplinary track and highway geometric design, and rail and traffic signal system design.

1.4 SYSTEM SAFETY PROGRAM PLAN AND SCRRA GENERAL POLICIES

The Manual supports the goals and objectives included within SCRRA System Safety Program Plan (SSPP). The goal of the SCRRA SSPP is the facilitation of a safe work environment through the integration of Standard Operating Procedures (SOPs), System Safety Standards (such as this Manual) and FRA/APTA (American Public Transportation Association) Audit recommendations. Consideration will be given to incorporating critical safety elements of this Manual into the SOP's within the SSPP.

SCRRA Board Resolutions 91-3 and 98-21 in Appendix H provide SCRRA's high level Board Policies with regard to high-rail grade crossings. Aside from section and paragraph headings and table and figure descriptions within the Manual, SCRRA general policy statements supporting the intent of Board Resolutions appear as *italicized dark blue* text. Although these are not recommended design practices and standards, as defined in the following paragraph, they are policies the lead Engineer should endeavor to adhere to during the design of highway-rail and pedestrian-rail grade crossings.

© Copyright 2009, SCRRA. All Rights Reserved

1.5 ESSENTIAL DESIGN PRACTICES, STANDARDS, AND DEVIATIONS

SCRRA intends to apply the recommended design practices and standards provided in this Manual when a significant physical change is proposed, or occurs, to an existing highway-rail grade crossing, including motor vehicle highway and non-motor vehicle pedestrian and bicycle approaches.

In addition, SCRRA will apply the recommended design practices and standards included in this Manual when a significant change in use is proposed, or occurs, to the highway-rail grade crossing; especially changes in use resulting in significant increases in vehicle, pedestrian, bicycle, and train traffic, or changes in traffic patterns.

Examples of changes in traffic patterns would include: the installation of a new left-turn lane near the highway-rail grade crossing approach; installation of new traffic signals on an adjacent intersection; or the opening of a new passenger rail station near an existing highway-rail grade crossing. It is not intended that the requirements in the Manual be applied retroactively to existing highway-rail grade crossings absent any proposed major physical or use changes, nor should they in the absence of an appropriate level of funding.

Recommended design practices and standards identified in the Manual, and listed in Table 1-2, are those considered most essential to enhancing and reducing the hazards at highway-rail grade crossings. Aside from section and paragraph headings, and table and figure descriptions, these **essential recommended design practices, standards, and policies** are called out in the Manual in **Boldface** type.

Deviations from the recommended design practices and standards listed in this Manual will require the approval of the SCRRA Director of Engineering and Construction, or a Change Review Committee, designated by the Director. The Change Review committee will typically include a cross section of senior managers representing the SCRRA Civil, Signal, Safety and Rail Crossings groups.

The current procedure for requesting a deviation from the Manual is to prepare and then request the necessary approvals by completing the SCRRA Design Exception form. This form is included in the Manual as Appendix F. The request should be signed and sealed by a registered engineer, preferably the lead Engineer for the highway-rail grade crossing design.

© Copyright 2009, SCRRA. All Rights Reserved

Table 1-2. SCRRA Essential Design Practices, Standards and Policies

Section	List of Essential Design Practices, Standards and Policies
2.5.1	Maintenance costs for exit gate systems, if used solely for establishing a quiet zone, shall be addressed in the C&M Agreement and shall not be funded by the SCRRA.
3.1.2	All private highway-rail grade crossings shall be subject to the recommended design practices and standards included in the Manual and applied to permanent highway-rail grade crossings.
3.1.4	Relocated or temporary highway-rail grade crossings shall be subject to the recommended design practices and standards included this Manual and applied to permanent highway-rail grade crossings.
3.2	Modifications of all highway-rail grade crossings or proposals for new highway-rail grade crossings shall be subject to the CPUC approval process.
3.5.1	Active warning devices shall be installed 15 feet from the centerline of the track, as measured from the center of the mast, at new or existing highway-rail grade crossings. A design deviation may be requested for active warning devices installed less than 15 feet; in no case shall an active warning device be installed less than 12 feet from the centerline of the track.
3.5.2	For skewed crossings, highway active warning devices shall be installed perpendicular to the highway 15 feet from the centerline of the track, as measured from the tip of the gate. If the geometry of the highway-rail grade crossing precludes installing the gates at 15 feet, then a design deviation may be requested to place the device closer to the crossing, but in no case less than 12 feet.
3.5.2	When a right-angle highway-rail grade crossing cannot be achieved due to physical constraints, the interior angle shall be designed as close to 90 degrees as practical, but shall not be less than 75 degrees.
3.5.4	The AASHTO WB-65 semi-tractor-trailer shall be used as the highway-rail grade crossing and grade crossing approach highway “design vehicle” for horizontal highway geometry.
3.5.5	The horizontal and vertical geometry of the approach highways and adjacent intersections (immediately upstream and downstream of the highway-rail grade crossing) shall safely accommodate all anticipated traffic movements and required clearances of the highway “design vehicle”.
3.5.10	Vertical curves within the highway at a highway-rail grade crossing shall be avoided.
3.5.10	At multiple track highway-rail grade crossings, the tops of the rails for all tracks shall be in the same plane.
3.5.10	The highway vertical profile grade at lip of gutter pan should be 0% within 10 feet of the centerline of the nearest track and the grade can be increased to 1.11% up to 37.50 feet from the centerline of the nearest track. Beyond 37.50 feet from the centerline of the nearest track, the grade on the approach to the highway-rail grade crossing shall be minimized, with due respect for low-ground-clearance vehicles, to allow maximum acceleration by heavy trucks.
3.5.10	Highway-rail grade crossing vertical profiles shall be analyzed with the Low-Ground Clearance Vehicle template, to determine the clearance for this vehicle type. The Low–Ground Clearance vehicle template has a nominal six (6) inch ground clearance. Highway-rail grade crossings should provide a minimum clearance of three (3) inches between the street surface and the lowest point on the Low-Ground Clearance vehicle template.

© Copyright 2009, SCRRA. All Rights Reserved

3.5.10	In the event site conditions do not allow for the design to meet the Low-Ground Clearance vehicle template, a design exception may be requested to allow a W10-5 low-ground-clearance sign (as specified in the CA MUTCD) to be installed on each approach to the highway-rail grade crossing sufficiently in advance to allow the vehicles to turn around in advance of the highway-rail grade crossing.
3.5.13	If the railroad geometry and facilities in the vicinity of the highway-rail grade crossing do not meet current SCRRA standards, or the railroad facilities are not in acceptable condition, the railroad should be reconstructed to correct any deficiencies.
3.5.16	Highway-rail grade crossings shall not be less than 24 feet wide and in addition shall be of a width not less than the traveled approach portions of the adjacent sections of the highway including usable shoulders, sidewalks, or pedestrian pathways.
3.5.16	A vehicle entering the footprint of the highway-rail grade crossing should have an unimpeded means of clearing the crossing.
3.6.1	Raised median islands shall be used on both approaches to the highway-rail grade crossing to constrain undesirable traffic movements, such as driving around the automatic crossing gates or making U-turns in the vicinity of the highway-rail grade crossing.
3.6.1	On each approach to the highway-rail grade crossing the raised median shall begin 10 feet from the centerline of the nearest track. The end of the median adjacent to the highway-rail grade crossing shall be square, with a six (6) inch radius on the corners.
3.6.2	The preferred minimum length of the median as measured from the highway-rail grade crossing gate shall be 100 feet. A design deviation may be requested where the 100 feet is unobtainable, but in no case shall the median be less than 60 feet. The width of the median shall be nine (9) feet if a warning device is installed in the median and four (4) feet if no warning device is installed in the median. The minimum width of the median may be two (2) feet with the approval of SCRRA and the local highway agency. Raised median curbs shall be eight (8) inches.
3.6.3	Trees, shrubbery, and similar view obstructing landscaping are not allowed on highway approaches within 100 feet of a highway-rail grade crossing. Low maintenance stamped concrete, pavers, or other hardscape materials shall be the standard landscape treatment for median islands and sidewalk approaches.
3.7	Driveways (private or public) located within 100 feet of the nearest highway-rail grade crossing active warning gate are strongly discouraged. Driveways within 100 feet of highway-rail grade crossings shall be removed or appropriately reconfigured to achieve safety objectives.
3.7	Driveways adjacent to a highway-rail grade crossing which require vehicle reversing (backing) movements shall not be allowed and the local highway agency shall prohibit the reversing movements.
3.7	The design and actual usage of the driveway shall preclude the movement of vehicles over the tracks while ingressing or egressing the driveway.
3.7	Special traffic signage shall be installed to control undesirable traffic movements, especially reverse or slow movements into or out of driveways near tracks.
3.8	Sidewalks and pavement approaches to the highway-rail grade crossing shall be constructed using hot mix asphalt concrete between the zero curb line and the panels.
3.9	Vehicle parking within 100 feet of the highway-rail grade crossing, as measured from the furthest automatic warning device from the tracks, shall be prohibited.
3.12.2	For intersections within 100 feet of a highway-rail grade crossing with multiple main tracks, an exit gate shall be installed to prevent left turn movements accessing the track area.

© Copyright 2009, SCRRA. All Rights Reserved

3.13	Pedestrian crosswalks parallel and adjacent to highway-rail grade crossings are strongly discouraged.
3.15.4	During the preemption hold interval, the traffic signal indications shall prevent vehicles from moving toward the track area.
3.15.4	A blank-out, changeable message sign, appropriate highway signal indication, or other similar control shall be used to prohibit turning movements toward the highway-rail grade crossing during preemption.
3.15.5	In case there is an existing left-turn lane and it is not provided with a signal head equipped with protected left-turn arrow, the traffic signal shall be modified to provide a protected left-turn arrow, or a blank-out sign.
3.15.5	A left-turn lane pocket configuration extending across the tracks is not allowed.
3.15.6	The use of a Standard No. 9-A cantilever for a pre-signal is not allowed.
3.15.7	In all cases, pre-signal poles shall be positioned so as to maintain visibility of the railroad flashing lights.
3.15.8	The farside intersection signal heads shall be equipped with programmed-visibility heads or louvers to restrict visibility of the intersection signal displays to drivers at the pre-signal stop line.
3.15.14	Backup or standby power systems shall be required at all traffic signals interconnected with railroad signals.
3.16.4	Limited service shall be used for traffic signals interconnected to SCRRA active warning devices.
3.16.5	The Los Angeles Department of Transportation "(LADOT) Railroad Preemption Worksheet" should be used to calculate the duration of the queue clearance interval.
4.1	Pedestrian treatments shall be installed at pedestrian grade crossings in accordance with the Pedestrian-Rail Grade Crossing Design Consideration Flowchart in Figure 4-2.
4.5	ADA must be incorporated into the overall design for pedestrian-rail grade crossings.
4.6	Pedestrian-rail grade crossing active warning devices shall be installed 15 feet from the centerline of the track, as measured from the center of the mast at new or existing crossings. A design deviation may be requested for active warning devices installed less than 15 feet, but in no case shall an active warning device be installed less than 12 feet from the centerline of track.
4.7.1	At stations, track centers shall be a minimum of 18 feet but not more than 25 feet to accommodate a center track fence.
4.10.3	Station pedestrian-rail grade crossings shall provide "full pedestrian treatments" (signage, channelization, active pedestrian warning devices with gates, and swing gates) and fencing, and shall not cross more than two (2) tracks.
4.10.3	Station pedestrian-rail grade crossings shall be installed approximately 60 feet from the ends of the station platform, and include full pedestrian treatments.
4.10.3	New pedestrian-rail grade crossings in the middle of platforms shall not be allowed.
4.10.4	New pedestrian-rail grade crossings shall not be allowed unless one or more existing pedestrian-rail or highway-rail grade crossings are closed.
4.11	"Full pedestrian treatments" shall include signage, markings, channelization, fencing, active warning devices with gates, and swing gates.
4.11	The process in Section 4.11 and Figure 4-2 shall be used to determine the designs of pedestrian-rail grade crossings and appropriate warning treatments.
8.3	LRT (Light Rail Transit) tracks located adjacent to SCRRA highway-rail and pedestrian-rail grade crossings shall be analyzed as a joint system. If the combined number of SCRRA and LRT tracks exceeds three (3), a grade separation shall be constructed.

© Copyright 2009, SCRRA. All Rights Reserved

8.6	The height of the fence within 150 feet of highway-rail grade crossings shall be four (4) feet. The height of the fence in the balance of the right-of-way shall be at least six (6) feet.
9.1	Highway agency and its contractors shall comply with the rules and regulations contained in the current editions of the SCRRA documents during construction of the project.
9.4	When a highway-rail grade crossing exists either within, or in the vicinity of, a temporary traffic control zone, lane restrictions, flagging, or other operations shall not be performed in a manner that would cause vehicles to stop on the railroad tracks unless a law enforcement officer or qualified flagger is provided at the highway-rail grade crossing to minimize the possibility of vehicles stopping on the tracks.
10.1	Highway agency shall independently inspect the preempted traffic signals intersection a minimum of every three (3) months, and shall report the results of this inspection to SCRRA.
10.2	The highway-rail grade crossings with preempted traffic signals shall be jointly inspected on a semi-annual basis.
10.3	Any changes to railroad or highway traffic conditions discovered during routine inspection and tests shall be reported to each party.

1.6 MANUAL CHANGES AND UPDATES AND THE MANUAL EFFECTIVE DATE

The various sections of the Manual, as dated in the lower right hand footer of each page, supersede all prior dated sections, Office Standards, Special Orders, and other directives relating to material covered. Revisions and updates to the Manual will be posted on the Metrolink website: Manual users shall be solely responsible for frequently checking for updates to ensure the latest version is being used when performing design or related work on SCRRA highway-rail grade crossings. The Manual is available on the SCRRA Website: www.metrolinktrains.com. The user shall ensure the latest version of the Manual, inclusive of any and all changes and updates, is being utilized. **The effective date of this Manual is June 30, 2009.**

1.7 SCRRA POLICY ON NEW HIGHWAY-RAIL GRADE CROSSINGS

The SCRRA Board (Board) has passed Resolution 91-3 and Resolution 98-21 pertaining to the establishment of a new highway-rail grade crossing on the SCRRA system. *SCRRA policy, in concert with State and National policy, strongly discourages the construction of new highway-rail grade crossings and seeks to reduce the number of active highway-rail grade crossing by promoting grade separation or closure of existing highway-rail grade crossings.* In accordance with Resolution 98-21, a new, additional highway-rail grade crossing is not allowed unless the member agency of SCRRA sponsors the request to construct it and the Board approves the request. This resolution also requires the member agency to sponsor the closure of existing highway-rail grade crossing(s) in order to open a new highway-rail grade crossing, so there will be no net increase in the number of highway-rail grade crossings on SCRRA's commuter rail system. These resolutions are attached as Appendix H. Any new highway-rail grade crossings shall be consistent with the recommended design practices and standards in this Manual and are subject to CPUC approval.

1.8 REFERENCE STANDARDS

The most current editions of the following standards, codes, specifications, and guidelines shall be consulted in the design of highway-rail grade crossings:

Primary References

Detailed drawings related to highway-rail grade crossings, pedestrian crossings and signal system automatic warning devices are included in SCRRA Engineering Standards. Highway-rail grade crossing drawings are included in Appendix J. These standards are not intended to replace existing regulatory standards or to be a substitute for engineering knowledge, experience and judgment, but are requirements, which are most important for safe construction, maintenance and operation of highway-rail grade crossings. Since the actual design will typically be site specific, information shown on these standard drawings will be modified as necessary in close collaboration with SCRRA and as per diagnostic process mentioned in Section 7.3. SCRRA completed design drawings and contract documents for 53 highway-rail grade crossings on SCRRA's Orange and Olive Subdivisions in Orange County in 2008-09. Some of the

© Copyright 2009, SCRRA. All Rights Reserved

sample drawings are include in Appendix K for reference purposes. SCRRA requires the highway agencies to prepare drawings and cost estimates showing highway, rail, traffic signal, pedestrian, signal and other details similar to the one shown on the sample drawings. Table 1-3 shows the list of SCRRA's Engineering Standards related to highway-rail grade crossing which are included in Appendix J.

1.9 RECOMMENDATIONS OF SCRRA SAFETY PEER REVIEW PANEL

In January 2009, SCRRA received a report authored by the Metrolink Commuter Rail Safety Peer Review panel entitled *Metrolink Commuter Rail Safety Peer Review Panel: Final Report*. The subject and purpose of the report was to discuss the observations and recommendations made by this Panel.

The Panel was appointed by a SCRRA Board Ad Hoc Subcommittee, and consisted of experts and professionals from across the nation having diverse backgrounds and experience from commuter rail and passenger agencies, private companies, and members of academic society.

The report recommended the implementation of an "Enhanced Safety Action Plan", which included short, medium, and long term safety and operational enhancements to the Metrolink System. This plan was organized into eight (8) key issues, the fifth being Infrastructure and Maintenance. The importance of this report to the Manual is that Grade Crossing Safety Enhancements and Sealed Corridors were included in the recommendations for Infrastructure Safety Improvements. Recognizing the importance of grade crossing to overall system safety, the Panel report recommended that SCRRA continue with its programs to enhance safety at highway-rail grade crossings and continue programs to either close or grade separate existing grade crossings.

1.10 ACKNOWLEDGMENTS

The Manual is the compilation of the collective effort of a Technical Advisor Group (TAG) formed specifically to develop the Manual. This TAG contributed hundreds of hours of effort over a period of one and one half years.

Several members of the TAG conducted inspections of other rail properties, regionally and across the nation, and met with rail engineering and safety professionals with regard to highway-rail grade crossing design practices and standards. The TAG consisted of highly experienced individuals, with expertise in the fields of: highway-rail grade crossing design and construction; railroad track design and construction; railroad signal design and construction; highway and roadway design and construction; traffic engineering; traffic signal design and construction; and safety and risk management.

Grateful recognition is due to the TAG members listed below and to the following contributors:

Darrell Maxey	SCRRA Director, Engineering and Construction
Naresh Patel	SCRRA Manager, Civil Engineering
Dan Guerrero	SCRRA Manager, C&S Engineering
Ron Mathieu	SCRRA Manager, Raíl Corridor C&E
Steve Wylie	SCRRA Assistant Executive Officer, Finance & Administration
Maryam Mojabi	SCRRA Rail Corridor Crossings Engineer
Greg Graves	SCRRA Manager, Risk Management
Fred Jackson	SCRRA Safety Manager
Varoujan Jinbachian	CPUC, Senior Utilities Engineer
Bruce Shelburne	Los Angeles County Metropolitan Transit Authority
Sean Skehan	City of Los Angeles, Department of Transportation

2.0 FEDERAL, STATE, AND LOCAL REGULATIONS AND SCRRA AGREEMENTS

2.1 INTRODUCTION

Regulatory agencies include those agencies with jurisdiction for modifications to existing and private highway-rail grade crossings, as well as any proposed new high-rail grade crossings. Highway-rail grade crossing closures, quiet zones, and grade separation are issues that may arise and need to be addressed in detail in conjunction with the modification of an existing or proposed new highway-rail grade crossing.

With regard to modifications and changes to existing SCRRA highway-rail grade crossings, the primary regulatory agency and point of contact will always be the California Public Utilities Commission (CPUC). Federal Railroad Administration (FRA) applicable regulations will also apply, especially in those instances when a quiet zone may be under consideration. The principal CPUC General Orders (G.O.) associated with highway-rail grade crossings are G.O. 72, 75 and G.O. 88.

In accordance with CPUC and Federal Highways Administration (FHWA) guidelines, representatives from both railroad and local highway agencies are required to participate with the regulatory authorities in all activities that involve the analysis and design of proposed changes to a highway-rail grade crossing. The SCRRA will be the regulatory point of contact, in the lead railroad role for highway-rail grade crossings it maintains and operates. The most likely other agency to be involved with highway-rail grade crossings will be the highway owner, which in most cases is the local City who owns and maintains the grade highway-rail grade crossing highway approaches. In some cases the highway owner is the County, or the State of California (Caltrans). Other stakeholders in the process of modifying, closing an existing highway-rail grade crossing or proposing a new highway-rail grade crossing may include local emergency services (fire and police), school districts, neighborhood associations, and nearby businesses. Technical, funding, or planning representatives from SCRRA's member agencies (METRO, OCTA, VCTC, SANBAG, and RCTC) will often participate in the grade crossing planning, design, and funding process, and will also participate in discussions with the regulatory agencies.

2.2 FEDERAL

The SCRRA rail network is regulated by the FRA. FRA regulations are included in 987 pages in Title 49, Parts 200 to 299 of the Code of Federal Regulations (CFR). The purpose of the FRA is to: enforce rail safety regulations; administer railroad assistance programs; conduct research and development in support of improved railroad safety and national rail transportation policy; and consolidate government support of rail transportation activities.

The FRA maintains the federal database of highway-rail grade crossings in the United States. A US DOT crossing number identifies each public highway-rail grade crossing in the United States. This crossing number is a random number issued by the FRA to the operating railroad. The number consists of seven characters: six numerical characters, followed by one letter (e.g. 123456A). The US DOT and the FRA use this number to maintain the federal crossing inventory. The available statistics applicable to a particular crossing can be found by using its number to search the federal database for accident, traffic, and basic inventory information. The user should verify this information with the

© Copyright 2009, SCRRA. All Rights Reserved

railroad and the highway agency. The operating railroad is responsible for supplying current information regarding the highway-rail grade crossing to the FRA. Information regarding a particular highway-rail grade crossing can be found on the FRA website at http://www.fra.dot.gov.

The "Safety" page on the FRA website includes information regarding the regulation of highway-rail grade crossings, as well as important database information. To access the desired information, the user is able to search using a number of different queries.

The principal FRA regulations associated with highway-rail grade crossings in CFR Title 49 are Parts 222 (*"locomotive hours at public highway-rail grade crossings")* and Part 234 ("*grade crossing signal system safety*"). Other Parts in CFR 49 also apply.

In October 2008, the Rail Safety Improvement Act of 2008 was passed and includes new provisions addressing grade crossing safety. The FRA also sponsors a number of programs promoting safety, inspection, highway-rail grade crossing safety, and trespass prevention. Additional details regarding FRA programs involving safety can be found on the FRA website.

2.3 STATE

In the State of California, the CPUC has regulations and standards governing many aspects of highway-rail grade crossings design, construction, maintenance and operation. The Rail Crossing Engineering Section (RCES) of the CPUC is the primary point of contact within the CPUC for issues involving highway-rail grade crossings. General Orders (GO) of the CPUC, combined with regulations contained in the California Manual on Uniform Traffic Control Devices (MUTCD), defines the requirements for application of warning devices and traffic control. In most cases, the highway agency has jurisdiction on the highway and pedestrian approaches outside of the crossing, in accordance with the standards of the agency and the CA MUTCD.

The criteria established within the GOs are developed through a formal rule-making process to become part of the standards. Each GO has a revision letter appended to the end of its number. For example, GO 88-B refers to revision B of GO 88. In the Manual, revision letters that apply to each referenced GO have been omitted, with the understanding that the user will refer to the latest version.

The construction or modification of any new highway-rail grade crossing must comply with regulatory process defined in Sections 1201–1205 of the Public Utilities Code. Construction of improvements cannot begin until authorization is received from the CPUC.

In most cases, the modification of an existing highway-rail grade crossing shall be applied for through the CPUC GO 88 process.

Each highway-rail grade crossing in California has a CPUC-issued identification number. Unlike the random nature of the FRA numbering system, the CPUC numbers identify the railroad, branch or subdivision, milepost, and nature of the track (main or branch track, pedestrian crossing, etc.).

© Copyright 2009, SCRRA. All Rights Reserved

By way of example, 101VY-123.40-A is a typical CPUC highway-rail grade crossing number array. That number is obtained as follows:

- 101 = Railroad company/authority
- VY = Subdivision and branch/line (see Table 2-1)
- 123.40 = Railroad milepost (to the nearest hundredth of a mile)
- A, B, C, D = Type of crossing (see Table 2-2 below)

Each SCRRA highway-rail grade crossing CPUC number uses "101" as a prefix, assigned by CPUC on behalf of SCRRA.

The following tables list some of the more commonly used highway-rail grade crossing identifiers:

Table 2-1. SCRRA Subdivision Identifiers

Subdivision	Identifier
River	RI
Valley	VY
Ventura	VE
Orange	OR
Olive	OL
Montalvo	MO
San Gabriel	SG
Pasadena	PA

Table 2-2. Highway-Rail Grade Crossing Type Identifiers

Overhead (RR under), grade-separated highway over railroad	A
Underpass (RR over), grade-separated highway under railroad	B
Spur Track (Industry Track) crossing	C
Pedestrian crossing	D
Railroad-railroad crossing (track over track)	T
Private crossing	X
Overhead pedestrian crossing	AD*
Underpass pedestrian crossing	BD*
Pedestrian private crossing	DX*
Overhead pedestrian private crossing	ADX*
Underpass pedestrian private crossing	BDX*

*Note: these are combinations of the above identifiers

As another example of how these identifiers are generated, crossing number 101VY–18.40-A is an overhead highway crossing in the SCRRA Valley Subdivision at mile post 18.40.

© Copyright 2009, SCRRA. All Rights Reserved

2.4 LOCAL

A highway agency or municipality has ownership and jurisdiction over the highway and highway approaches on which the highway-rail grade crossing is located. While agreements between the railroad and the agency define the physical limits of the highway-rail grade crossing, the approach highways and sidewalks outside of those defined limits falls under the jurisdiction of the local highway agency. (The lead Engineer is referred to CPUC General Order 72 for a description of these limits).

In carrying out this responsibility, the highway agency will define the engineering standards and design practices to be used in the development of designs for the highway-rail grade crossing's approaches. These standards must be minimally compliant with CA MUTCD and should be consistent with the recommended design practices and standards in this Manual.

Highway-rail grade crossing and the associated highway and sidewalk approaches typically involve the intersection of three transportation modes (rail, motor vehicles, and non-motor vehicle pedestrian and bicycles) and include overlapping ownership, design, construction, maintenance, operation and funding responsibilities. SCRRA, the local highway owner, CPUC, and other stakeholders should develop highly-collaborative approaches when planning and designing highway-rail grade crossing modifications or new crossings.

The local highway agency responsible for the highway approach is strongly encouraged to follow the recommended design practices and standards included within this Manual when planning and designing physical or use changes to the highway-rail grade crossing and highway approaches.

2.5 SCRRA

2.5.1 Construction and Maintenance Agreements

The construction or modification of a highway-rail grade crossing within the SCRRA system shall be defined in one or two agreements, ultimately culminating in a Construction and Maintenance (C&M) Agreement. In many cases, the C&M Agreement will be preceded by simple letter agreements to initiate the review of the conceptual plans, followed by more detailed agreements addressing complicated design services support, including scope development, full design, cost estimates and schedules, construction, and construction management of the railroad improvements.

Typical changes and modifications that trigger SCRRA review and approval to highway-rail grade crossings include, but are not limited to: 1) interconnections with traffic signals and traffic signal preemption; 2) making enhancements to the railroad warning devices or traffic controls associated with the highway-rail grade crossing; 3) performing significant highway or pedestrian pathway work on the approaches and within the limits of the crossing; 4) adding pedestrian or bicycle paths parallel and intersecting grade crossings; 5) creating significant changes in the use of the highway approaches; and 6) implementing other projects that may have a significant effect on the traffic patterns over the crossing.

© Copyright 2009, SCRRA. All Rights Reserved

Before any designs can be finalized and before any construction work can begin, an agreement that includes a detailed work description must be executed by the SCRRA and the highway agency and any other outside parties participating in the funding. This agreement specifies the method of payment; assigns responsibility for design, construction, funding, and maintenance; provide cost estimates of the SCRRA work; and specifies the form, duration, and amount of insurance and liability. The CPUC must also approve the final design of changes and modifications to existing crossings before any construction can begin.

It is important that the development of documents outlining the responsibilities of the parties and SCRRA begin early, as the design is established in order to properly define the scope of work and the project cost. A new C&M Agreement will typically supersede any existing railroad/highway agency agreement. The SCRRA will require that the funding for SCRRA services associated with highway-rail grade crossing agreements (including "Letter Agreements", "Design Service Agreements" or "Design Scoping and Cost Estimating Agreements" as well as C&M Agreements) be deposited with SCRRA upon execution of the Agreement and in advance of SCRRA incurring any costs.

The maintenance costs associated with automatic warning devices is partially reimbursed by the CPUC for highway agencies and shall be in accordance with CPUC Code Section 1202.2**. Maintenance costs for exit gate systems, if used solely for the establishing a quiet zone, shall be addressed in the C&M agreement and shall not be funded by the SCRRA.**

SCRRA has developed standard specifications that define the responsibilities of contractors working within rights-of-way operated and maintained by SCRRA. The local highway agency should be familiar with these specifications and include these specifications with any bid documents associated with the work at the crossing. A list of these specifications can be found in Appendix I.

All project maintenance shall be conducted in accordance with the C&M Agreement. The local highway agency shall maintain and keep in a state of good repair the traveled way, fence, gates, signs, traffic signals, landscaping, and any other improvements within the jurisdiction and ownership (or easement, or licensed traveled-way) of the local highway agency.

As part of the C&M agreement, the highway agency shall notify SCRRA within five (5) working days in advance of any maintenance activity, and within thirty (30) days in advance of any construction activity to occur within the right-of-way. The highway agency shall be required to reimburse SCRRA the actual cost and expense incurred by SCRRA for all services and work performed in connection with the project, including a computed surcharge representing SCRRA's costs for administration and management.

2.5.2 Right-of-Entry Agreements

In order to perform work on a right-of-way operated and maintained by SCRRA, Right-of-Entry Agreements are required. For temporary or short-term uses of rights of way (such as surveying activities and shallow geotechnical investigations), the highway agency or contractor is required to submit SCRRA Form 5 – Indemnification and Assumption of Liability Agreement. For projects involving construction on the SCRRA rights-of-way, the highway agency or contractor is required to enter into SCRRA Form 6 – Temporary

© Copyright 2009, SCRRA. All Rights Reserved

Right-of-Entry Agreement. This agreement defines the nature of the work, the flagging requirements, and the appropriate safety measures that must be in place during the work. This includes all work within the right-of-way, from initial design through the completion of construction. Additionally, the movement of oversize vehicles over SCRRA-maintained and operated crossings requires a fully executed Form 4 – Agreement for Moving Oversized Loads Over Highway-Rail Grade Crossings**.** These agreements are available on the SCRRA website: http://www.metrolinktrains.com.

2.5.3 Rights-of-Way

In many cases, railroad right-of-way is maintained by SCRRA and owned in fee by the member agencies. Highway agency or third party projects that affect the right-of-way must be coordinated with SCRRA's Rail Corridor C&E Division.

The modification of highway-rail grade crossings often has an effect on the existing right-of-way defining the crossing. At the earliest stages of the project, the highway agency shall determine the status of the right-of-way within the limits of the project in order to properly identify the encumbrances and issues related to the crossing.

In cases where additional right-of-way is required, the lead Engineer shall develop the appropriate mapping and right-of-way definitions in accordance with SCRRA or local highway agency standards for the proper definition of the right-of-way. The application of the SCRRA's recommended design practices and standards in this Manual to a highway-rail grade crossing will likely result in the need for additional right-of-way for sidewalks, highways, or other civil features related to safety enhancements.

In most cases, the local highway agency takes the lead for land acquisition. The lead Engineer shall properly define the necessary right-of-way, provide legal descriptions, and work with SCRRA's right-of-way administrator and the member agency's real estate department, as needed, to forward the process of property acquisition, easement, or preparing a license agreement.

In some cases, SCRRA also shares the right-of-way with the BNSF Railway Company (BNSF) and the Union Pacific (UPRR) railroads; in order to perform work on their rights-of-way, approval shall be obtained from BNSF and UPRR.

The procedures for applying for right-of-way encroachment, and the appropriate forms, are found in Form 36: Right-of-Way Encroachment Approval Procedures, available on the SCRRA website: http://www.metrolinktrains.com.

© Copyright 2009, SCRRA. All Rights Reserved

3.0 HIGHWAY-RAIL GRADE CROSSINGS

3.1 SCOPE

Highway-rail grade crossings are the level intersection of the railroad and highway, and include the pedestrian and bicycle paths located at the edges and parallel to the highway. Pedestrian-rail grade crossings and station pedestrian-rail grade crossings are discussed in Section 4.0. Grade separations are discussed briefly in Section 5.0. Section 3.0 of the Manual provides the design process for modifying and enhancing existing highway-rail grade crossings or constructing new highway-rail grade crossings.

3.1.1 Public Highway-Rail Grade Crossings

A “public highway-rail grade crossing” is a highway-rail grade crossing where the highway is owned or controlled by a highway agency; typically a city, in some cases a county, and less frequently, the state. “At-grade” public highway-rail grade crossings, also known as “level” crossings or highway-rail crossings, are locations where trains intersect with other modes of transportation, including motor vehicles, pedestrians, and bicycles.

In this Manual, the term “highway-rail grade crossing” will be used to mean rail-grade crossing, rail crossing, at-grade crossings, or crossing. The term “highway” will be used to mean highway, road, or approach road. Over 250 (about 90%) of SCRRA’s highway-rail grade crossings are categorized as public highway-rail grade crossings. The chance for conflict at public highway–rail grade crossings increases whenever other modes of transportation are introduced which cross the traveled path of a train, and when the quantity or volume of modal traffic increases. To reduce the chance of such a conflict, appropriate warning treatments are applied to warn motorists and pedestrians of oncoming trains. Highway-rail grade crossing conflicts at public highways are exacerbated by the fact that highway agencies have a very limited ability to control the public’s access to highway-rail grade crossings; additionally, the nature of railroad operating mode does not permit trains to stop in same relative distances as vehicles.

In order to provide a consistent and minimal level of safety at the highway-rail grade crossing, warning devices such as vehicle gates, flashing lights, bells, signage, and pavement markings are incorporated to warn users of the highway-rail grade crossing of approaching trains.

3.1.2 Private Highway-Rail Grade Crossings

A “private crossing” is a highway-rail grade crossing in which the highway is owned or controlled by a private party, and not a highway agency. Private highway-rail grade crossings are generally on highways or at driveways to private property, and in many cases are used by the general public essentially in the same manner as a public crossing. A private party normally owns the highway on at least one side. SCRRA has 29 private highway-rail grade crossings.

In many cases, the SCRRA, or the member agency, provides access to private property under an agreement between the property owner and the SCRRA or SCRRA member agency. These highway-rail grade crossings are prevalent where a highway or driveway is used as the means of accessing private property that would otherwise be landlocked.

© Copyright 2009, SCRRA. All Rights Reserved

A private highway-rail grade crossing might also be used in cases where the railroad intersects private property and the private crossing allows necessary access between sections of the private property divided by the railroad (e.g., farmland). **All private highway-rail grade crossings shall be subject to the recommended design practices and standards included in this Manual and applied to permanent highway-rail grade crossings.**

3.1.3 Temporary Construction Highway-Rail Grade Crossings (Not Public)

Temporary Construction Crossings (TCC's) are normally gated and locked when not in use. Access across these TCC's is controlled with a SCRRA Employee-in-Charge (EIC). Temporary highway-rail grade crossings are generally not open to the public and shall be designed and constructed in accordance with SCRRA Engineering Standards.

3.1.4 Temporary Highway-Rail Grade Crossings (Used by the Public)

A temporary highway-rail grade crossing occurs when the highway, railroad, or both is temporarily relocated to a new location which, in turn, triggers the temporary relocation of the highway-rail grade crossing. The temporary relocations can be due to the construction of a grade separation, a railroad line change, or some other major construction project that requires the relocation of road or track. **Relocated or temporary highway-rail grade crossings shall be subject to the recommended design practices and standards included in this Manual and applied to permanent highway-rail grade crossings.**

3.2 DESIGN PROCESS AND SEQUENCE

The process and sequence for the proper analysis and design of highway-rail grade crossing improvements involves several different engineering disciplines. A typical highway-rail grade crossing design considers motorist and pedestrian behaviors; civil, railroad, and railroad signal design; safety and risk analysis; land use and right–of-way issues; and traffic engineering. This design process involves all engineers and other professionals that participate in the ultimate configuration of the crossing, from the onset of design. The process is outlined in Figure 3-1.

Modifications of all highway-rail grade crossings or proposals for new highway–rail grade crossings shall be subject to the CPUC approval process. The lead Engineer and grade crossing design team should allow ample time [at least four (4) weeks] in the design process for Conceptual (5%) and Pre-Final Design (90%) diagnostic reviews by the engineering team (refer to Section 7.1). All major elements including rail and traffic signals of highway-rail grade crossing project shall be at the at the 90% design, calculation, and cost estimate level before conducting the per-final design level diagnostic review. After Pre-Final Design diagnostic reviews, the ultimate scope of the project, and ultimately the final design scope, will be "locked down". These diagnostics are an important part of the design process and require the necessary input from stakeholders to determine the effectiveness of the changes proposed. The lead Engineer shall take note of the results of the diagnostic meetings, record all comments, and incorporate the appropriate recommendations and changes into the design.

The design of the highway-rail grade crossing shall be circulated for review and approval within SCRRA in order to include the input received from various departments or

© Copyright 2009, SCRRA. All Rights Reserved

functional groups (signals, track, safety, rail crossings) within SCRRA, as well as from the highway agency and CPUC. The overall functionality and effectiveness of a highway-rail grade crossing will be determined by operational and maintenance needs as well as engineering design needs. The input from these departments early in the engineering process will provide important information that will affect the overall design of the crossing.

A design checklist (included in Appendix G) shall be signed by the lead Engineer in responsible charge for the design of the project. This checklist defines what is expected to have been included in each of the design level submittals, and shall be submitted with each of the submittals listed below (Figure 3-1). In general:

- Project Concept & Design Criteria (5% Design) submittal will incorporate alternative design solutions, program cost estimates, and confirm the correctness and completeness of project objectives.
- Preliminary Design (30% Design) submittal will advance the design to a level in which: potential impacts to the environment, utility lines, and drainage can be identified; traffic and pedestrian counts, and traffic engineering analysis have been performed; construction staging and sequencing alternatives have been identified; and a preliminary engineer's estimate can be provided. A C&M Agreement may be developed and executed between the 30% and 90% designs.
- Pre-Final Design (90% Design) submittal will incorporate comments and advance the design to the near-completion level. Designs for all functional areas, including highway, traffic signals, track, signals, utilities, and right-of-way, will be complete and coordinated. Specifications will be complete. The design scope should be "locked down" at this point: the method of contract delivery has been indentified; the roles and responsibilities of the parties have been determined; and a realistic funding plan developed. Only minor revisions should be expected in response to comments at this level.

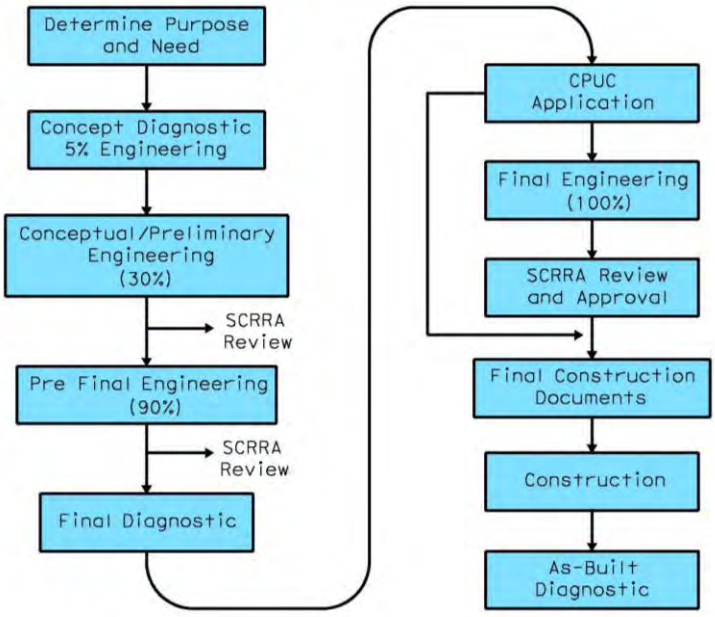

Figure 3-1. Highway-Rail Grade Crossing Design Process Flow Chart

© Copyright 2009, SCRRA. All Rights Reserved

- Final Design (100% Design) submittal incorporates the 90% comments and will be signed and sealed by a registered engineer. Comments may be generated and must be incorporated and resubmitted to SCRRA as Camera Ready Bid Documents.
- Typically, the railroad signal (active warning device) design for a highway-rail grade crossing shall be performed by a different design firm than the civil design. The signal design will often lag the civil design. However, at the Pre-Final (90%) and Final (100%) design phases, both civil, traffic and signal design shall be at the same level of completion.

3.3 DESIGN GOALS

The purpose of, and need for, modifications should be set forth at the start of design. This will form the basis for the overall design of the project, and set the ultimate goals for the improvements. The purpose and need of the project will be developed taking into consideration the overall safety aspects of the crossing, as well as its operational and maintenance aspects. In addition, the source of funding for the improvements and the stakeholders involved with the project, will be defined. The evolving diagnostic process may define changes in those ultimate goals; changes that will ultimately decide the outcome of the final design.

The initial efforts of design should include:

- Meetings and field surveys with SCRRA engineering and maintenance staff to determine existing conditions of the project site that could affect the construction of the proposed improvements.
- Determination and understanding of the site characteristics and condition of the railroad facilities, including track, crossing and wayside signals, and the railroad operating environment. The railroad operating environment (train speeds, number of trains, train operating patterns) may have a major impact on the means and methods for construction and any proposed permanent grade crossing improvements. In addition, the designer will need to coordinate with SCRRA ongoing maintenance planning so the construction schedule can be incorporated into a regular maintenance cycle. This is especially important in areas where heavy rail traffic minimizes opportunities to remove tracks from service in order to perform construction and maintenance.

3.4 HIGHWAY

The overall design of the highway (and requirements for that design) is set forth in the requirements of the highway local agency, in AASHTO Publications, in the CA MUTCD, and in Caltrans Standards, and should be consistent with the requirements of this Manual. In most cases, the local highway agency has jurisdiction over the highway outside of the immediate area of the crossing. SCRRA and local highway agency jurisdictional limits are generally defined by the CPUC and covered in more detail in the C&M Agreement, which may include project plans as an attachment.

© Copyright 2009, SCRRA. All Rights Reserved

The overall quality of the constructed highway, including approaches to the highway-rail grade crossing and the crossing itself, shall be sufficient to:

- Provide for a smooth ride for motor vehicles at the posted speed limit.
- Provide a smooth ride for train traffic at the designated operating speeds.
- Provide safe stopping sight distances (in keeping with the posted speed limit).
- Provide adequate highway and adjacent intersection capacity so motor vehicles do not queue on the tracks.
- Include the display of appropriate signing and pavement markings.
- Provide for ADA compliance for pedestrians through the crossing.
- Minimize sight restrictions for highway users and train operations.
- Allow highway users to make clear and informed decisions that will minimize traffic congestion and the potential for conflict.
- Comply with the recommended design practices and standards in this Manual.

On the approaches to a crossing, the characteristics of the approach highway, traffic signals, and approach sidewalks are an extremely important factor in developing an effective design of the highway-rail grade crossing.

3.5 HIGHWAY AND RAILROAD GEOMETRY

As applied to highways and railroads, geometry defines the horizontal and vertical curvature. “Crossing geometry” refers to the geometrical relationship between the alignment of the crossing highway and the railroad. This horizontal relationship may be perpendicular or skewed. The vertical relationship may include “humps” or vertical curves. These geometric features can affect traffic operations at a highway-rail grade crossing. Additional geometric concerns, such as the elevation of the crossing and the number of lanes, are also aspects that shall be considered during the crossing design. The geometric characteristics of a highway-rail grade crossing greatly affect the visibility of the crossing to users—drivers and pedestrians alike.

Sight distance requirements for horizontal and vertical highway geometry are defined within the Caltrans Highway Design Manual, the AASHTO Manual, the CA MUTCD, and local jurisdiction standards and regulations. The lead Engineer shall consider sight distance to the extent possible within the design of the highway-rail grade crossing geometry, and provide horizontal and vertical curves that provide an unobstructed view of the crossing. The horizontal and vertical alignment of the highway at the approaches to the crossing—in addition to the geometry of the railroad tracks—are major factors in considering sight distance and overall visibility at the crossing.

3.5.1 Perpendicular Highway Rail Crossings

It is SCRRA’s policy, wherever possible, to have the highway intersect the railroad at a right angle. This highway-rail grade crossing configuration allows the most direct and consequently the safest means of traversing the railroad right-of-way. An example of a perpendicular highway-rail grade crossing is shown on Figure 3-2. **Active warning devices shall be installed 15 feet from the centerline of the track, as measured from the center of the mast, at new or existing highway-rail grade crossings. A design deviation may be requested for active warning devices installed less than 15 feet; in no case shall an active warning device be installed less than 12 feet**

© Copyright 2009, SCRRA. All Rights Reserved

from the centerline of the track. This standard is consistent with the requirement of Part 8 of the CA MUTCD. The benefits of a perpendicular highway-rail grade crossing are as follows:

- Shortest route across the crossing.
- Minimal gate-arm length and standard location for placement.
- Decreased opportunity for the wheels to become caught in the flangeways.
- Improved visibility of the highway-rail grade crossing and all approaches.

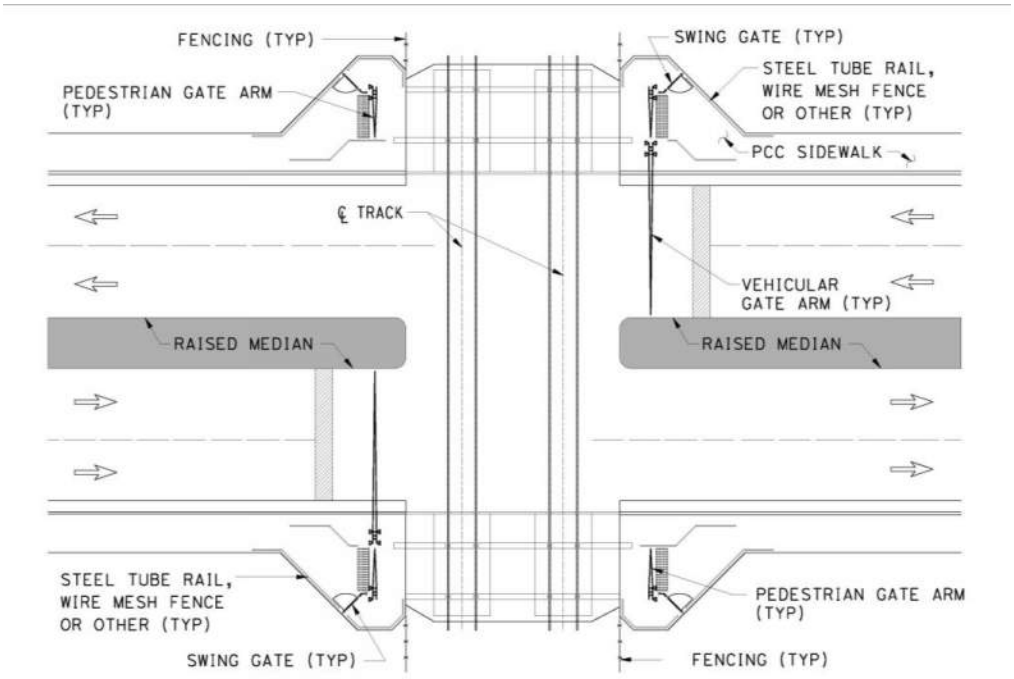

Figure 3-2. Perpendicular Highway-Rail Grade Crossing

3.5.2 Skewed Crossings

A skewed highway-rail grade crossing is one where the highway intersects the track at an obtuse or acute angle. Although this is undesirable highway-rail grade crossing geometry, it is often unavoidable. Examples of the standard layouts for a skewed highway-rail grade crossing are shown in Figures 3-3 and 3-4. A skewed highway-rail grade crossing has several undesirable characteristics, including the following:

- Increased time for motor vehicles and pedestrians to traverse the highway-rail grade crossing.
- Highway geometry may significantly increase the length of the gate arms.
- Often results in undesirable locations of highway-rail grade crossing devices that may affect overall design needs.
- Increased opportunity for wheels to become caught in the flangeways.

© Copyright 2009, SCRRA. All Rights Reserved

A skewed highway-rail grade crossing injects additional complicating factors into the design of the overall highway-rail grade crossing. Where standard applications of warning devices may be applied without modification at perpendicular highway-rail grade crossings, the skewed highway-rail grade crossing requires adapting the standard design to meet the highway-rail grade crossing angle. For example, an angled crossing may require that gates be placed at greater, nonstandard distances from the track in order to provide proper lane coverage.

For skewed crossings, highway active warning devices shall be installed perpendicular to the highway 15 feet from the centerline of the track, as measured from the tip of the gate. If the geometry of the highway-rail grade crossing precludes installing the gates at 15 feet, then a design deviation may be requested to place the device closer to the crossing, but in no case less than 12 feet. Application of these recommended design practices and standards: 1) minimizes the length of gate arms; and, 2) directs the lights on the arm along the highway approaches for maximum visibility.

When a right-angle highway-rail grade crossing cannot be achieved due to physical constraints, the interior angle shall be designed as close to 90 degrees as practical, but shall not be less than 75 degrees. Refer to Figure 3-5. In instances where this crossing geometry is satisfied, the gates shall be installed perpendicular to the highway-rail grade crossing highway. If the angle of skew must be less than 75 degrees due to physical constraints, then the lead Engineer shall develop highway-rail grade crossing geometry that will maximize the angle of skew.

A significant challenge that arises with modified, nonstandard gate placement is the increased travel distance for pedestrians and vehicles traversing the highway-rail grade crossing. The lead Engineer shall develop configurations that will minimize pedestrian travel time between pedestrian gates over the highway-rail grade crossing, while providing pedestrian gate arms of minimum length.

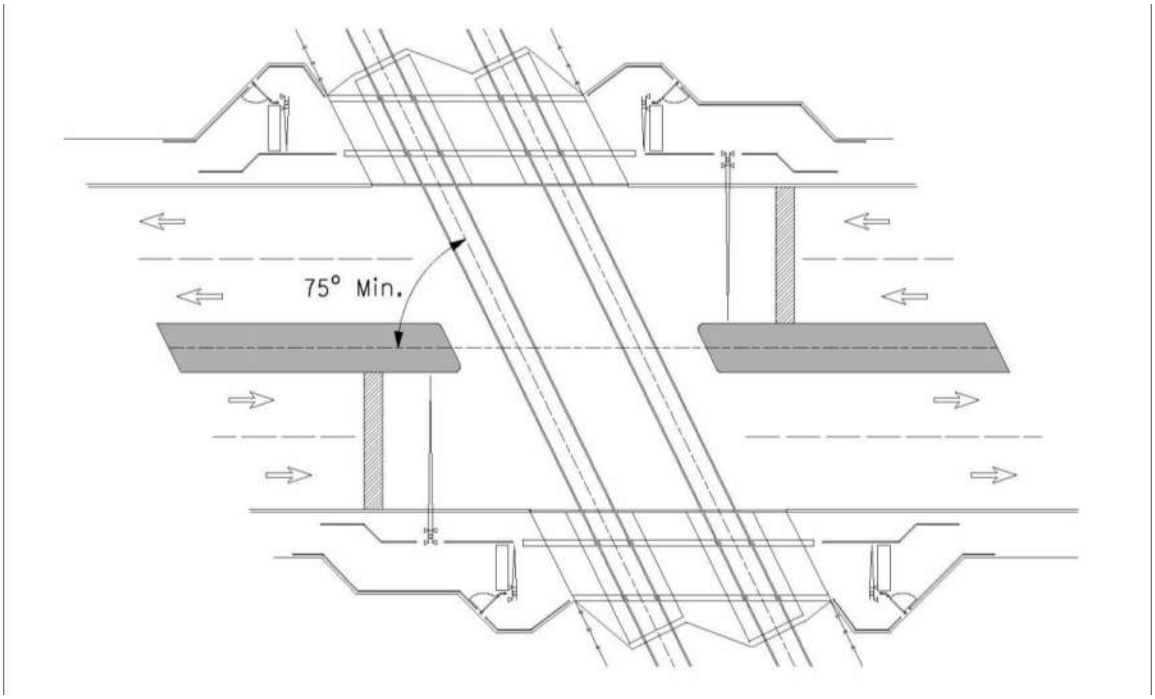

Figure 3-5. Skewed Highway-Rail Grade Crossing (75º Minimum)

3.5.3 Highway Features

Several highway features pertinent to the design of the highway-rail grade crossing must be considered to ensure an adequate design. The design should satisfy both the physical and operational needs of the railroad, as well as accommodate the traffic (vehicles, pedestrians, and bicycles) that must safely traverse the highway-rail grade crossing.

3.5.4 Highway Design Vehicles

Both the highway horizontal and vertical design criteria and the design vehicles are established by the highway agency having jurisdiction over the highway. The highway shall be designed to accommodate the largest, longest, and lowest ground clearance vehicle that may be expected to traverse the highway-rail grade crossing. These vehicles and their characteristics are discussed in the AASHTO publication, A Policy on Geometric Design of Highways and Streets. In the State of California, and for SCRRA highway-rail grade crossings, **the AASHTO WB-65 semi-tractor-trailer shall be used as the highway-rail grade crossing and grade crossing approach highway "design vehicle" for horizontal highway geometry.** In locations where the WB-65 vehicle may be prohibited access, the mere posting of signage restricting access to a highway-such as "NO TRUCKS OVER 3 AXLES," or "NO TRUCKS OVER 3 TONS" should not be considered a reliable deterrent for controlling truck access to a SCRRA highway-rail grade crossing.

3.5.5 Horizontal and Vertical Alignment

The horizontal and vertical geometry of the approach highways and adjacent

© Copyright 2009, SCRRA. All Rights Reserved

intersections (immediately upstream and downstream of the highway-rail grade crossing) shall safely accommodate all anticipated traffic movements and required clearances of the highway "design vehicle".

3.5.6 Proximity to Adjacent Traffic Outlets

The design must consider highway-rail grade crossing proximity to highway intersections, alley intersections, and driveways, and the impact of adjacent traffic control devices on the operation of the highway-rail grade crossing. Refer to Section 3.7 for additional information on driveways.

3.5.7 Drainage and Highway Pavement

The proper drainage of both the highway and the track structure shall be considered by the lead Engineer at all phases of the design. Improper drainage can lead to failure of the track and highway approach pavement, which in turn may affect the overall operations. The pavement near (within 50 feet) of the highway-rail grade crossing should be "overdesigned", or designed to very high standards in terms of thickness, materials, and quality of construction, in order to minimize or prevent the need for any future repairs or rehabilitation. The need for a high quality low maintenance pavement is particularly important where any exit gate loop detectors are located. Pavement repairs and rehabilitation in the vicinity of a highway-rail grade crossing can be extremely difficult, disruptive (both to motor vehicle users and to the railroad), and costly to perform, due to the difficulty of coordinating traffic outages of both the highway and railroad.

3.5.8 Design Speed

The design speed of the highway-rail grade crossing highway is usually equal to or slightly above the posted speed limit that is set by the highway agency. If the posted speed limit cannot readily be determined, the lead Engineer shall inquire with the highway agency having jurisdiction over the highway-rail grade crossing.

3.5.9 Highway Horizontal Curves

Horizontal curves in the highway may create overall visibility challenges to the lead Engineer. In many cases, enhancements to highway-rail grade crossings do not include modifications to the existing highway geometry. Often, the existing highway geometry cannot be modified due to limited right-of-way or other reasons. In cases where existing horizontal curves in the highway affect the overall visibility of the crossing, the lead Engineer shall adhere to the following process:

- Analyze the sight distance through the approaches to the highway-rail grade crossing, utilizing highway design criteria defined by the agency having jurisdiction over the highway.
- Determine the feasibility of highway geometry modifications to enhance the visibility of the crossing.
- Use additional signaling or warning devices as necessary to mitigate the effects of horizontal curves on visibility.

© Copyright 2009, SCRRA. All Rights Reserved

3.5.10 Vertical Profile of the Highway and Highway Cross Slope

The vertical profile of the highway is often a matter of matching existing topography with the surface geometry of the railroad highway-rail grade crossing. As a result, the lead Engineer may be faced with several design options in order to design an efficient and safe crossing. The following items shall be followed when developing the design of the vertical profile of the highway:

- The approach grades to the highway-rail grade crossing shall be minimized. This is to allow large vehicles to properly accelerate and quickly traverse the highway-rail grade crossing when stopped before the highway-rail grade crossing warning gates. A steeper slope on the approaches to the highway-rail grade crossing will increase the acceleration time and, consequently, will increase preemption time for the traffic signals related to the crossing. Refer to Section 3.16 for additional information on preemption.
- Transitions of the edges of the pavement (EP) of the highway-rail grade crossing approach highway—from the normal 2% cross-fall (from centerline to EP) to the track grade (where both halves of the highway will slope to match the profile of the railroad track)—shall be accomplished in a manner that will not create any abrupt changes in the highway. The lead Engineer shall follow the guidelines shown in Figure 3-6 below, to determine the length of the EP transition.

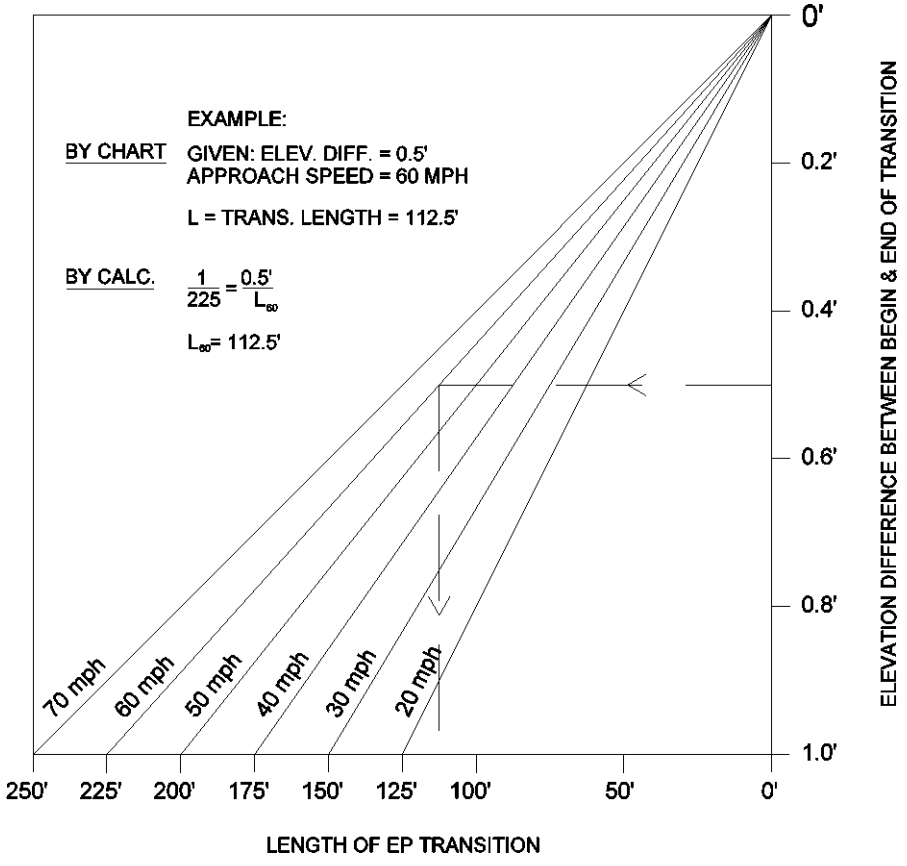

Figure 3-6. Rate of Change in Pavement-Edge Elevation Changes for Highway Approaches to Highway-Rail Grade Crossings

© Copyright 2009, SCRRA. All Rights Reserved

- **Vertical curves within the highway at a highway-rail grade crossing shall be avoided.** If necessary, vertical curves should meet the Stopping Sight Distance requirements from the Caltrans Highway Design Manual, or AASHTO publication entitled A Policy on Geometric Design of Highways and Streets.
- **At multiple track highway–rail grade crossings, the tops of the rails for all tracks shall be in the same plane.** If this is not accomplished, traffic tends to slow down as vehicles traverse the uneven crossing. This leads to traffic congestion and increases the probability of rear-end accidents. In addition, highway-rail grade crossing maintenance requirements shall increase due to the need for pavement repairs adjacent to, and in between, highway-rail grade crossing panels.
- The intersection of highway and railroad shall be as level as possible.
- **The highway vertical profile grade at lip of gutter pan should be 0% within 10 feet of the centerline of the nearest track and the grade can be increased to 1.11% up to 37.50 feet from the centerline of the nearest track. Beyond 37.50 feet from the centerline of the nearest track, the grade on the approach to the highway-rail grade crossing shall be minimized, with due respect for low-ground-clearance vehicles, to allow maximum acceleration by heavy trucks.** This shall minimize track clearance time during railroad preemption. Refer to Figure 3.7, SCRRA's Engineering Standard for additional details. Refer to Section 3.16 for additional information on preemption and highway-rail grade crossing profiles.

Often railroad tracks are constructed higher than adjacent topography to allow for proper drainage of the railroad right-of-way. This often creates a vertical "hump" at the crossing. A severe hump may cause long and low trailers to become "high centered" and stranded on the crossing. A similar situation can occur with long limousines. These trapped vehicles, in addition to stopping or slowing traffic, represent a serious hazard to both the vehicle and train.

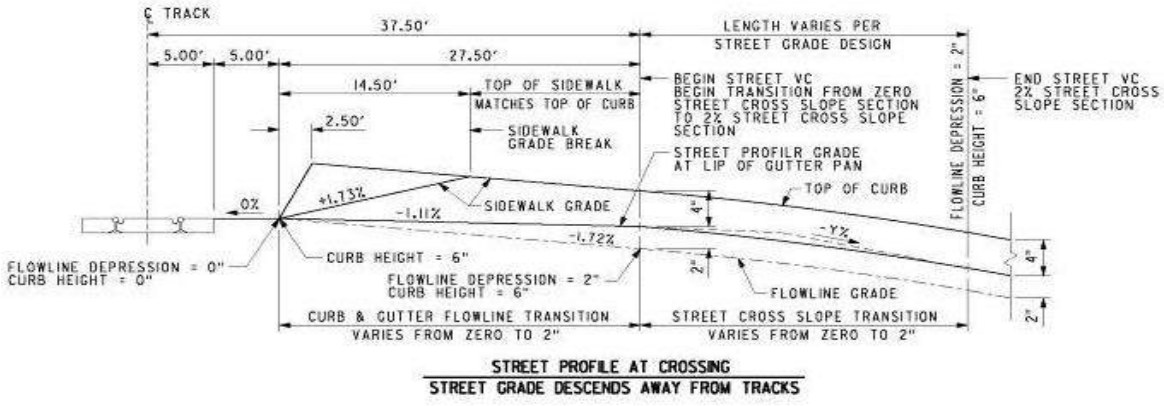

Figure 3-7. Highway Profile at Highway-Rail Grade Crossing

© Copyright 2009, SCRRA. All Rights Reserved

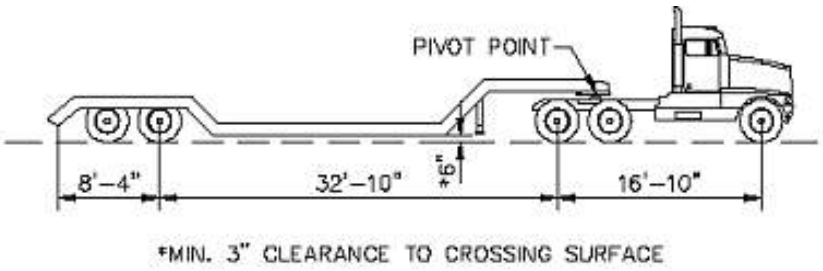

Figure 3-8. Low-Ground Clearance Vehicle Template for Highway-Rail Grade Crossing Design

Highway-rail grade crossing vertical profiles shall be analyzed with the Low-Ground Clearance Vehicle template to determine the clearance for this vehicle type. The Low–Ground Clearance Vehicle template has a nominal six (6) inch ground clearance. Highway-rail grade crossings should provide a minimum clearance of three (3) inches between the street surface and the lowest point on the Low-Ground Clearance Vehicle template as illustrated in Figure 3-8.

The lead Engineer shall consider all vehicles that may utilize the crossing, regardless of posted signs prohibiting access.

In the event site conditions do not allow for the design to meet the Low-Ground Clearance Vehicle template, a design exception may be requested to allow a W10-5 low-ground-clearance sign (as specified in the CA MUTCD) to be installed on each approach to the highway-rail grade crossing sufficiently in advance of the crossing to allow low-ground clearance vehicles to turn around in advance of the highway-rail grade crossing. In addition, as recommended by the CA MUTCD, a supplemental message such as “Ahead,” “Next Crossing,” or “Use Next Crossing” (with appropriate arrows) should be placed at the nearest intersecting road where a vehicle can detour, or at a point on the highway wide enough to permit a U-turn.

3.5.11 Truck Turning Capabilities

The design of improvements to the highway-rail grade crossing must factor in all likely means by which the highway-rail grade crossing shall be traversed. The design shall allow for the free movement of all motor vehicles throughout the highway-rail grade crossing envelope. In areas of heavy industrial use, truck size becomes a factor in the design of the crossing. A truck that cannot safely traverse the highway-rail grade crossing represents a serious hazard. The lead Engineer shall apply the turning radius of the horizontal design vehicle for all allowable turning movements, superimposing the vehicle wheel paths and vehicle body paths onto the proposed highway-rail grade crossing design. This shall be accomplished using the appropriate truck turning templates or computer software.

Figure 3-9 shows the turning radii of the AASHTO WB-65 design vehicles when traversing a designed crossing. As shown in this figure, the characteristics of the design

© Copyright 2009, SCRRA. All Rights Reserved

vehicle have a major impact on the design of the crossing. Issues such as curb return radius, the placement of medians, and the overall length of medians are affected by this placement. In some cases, the installation of additional traffic control methods such as medians may not be recommended if the median (or other control measure) would prevent a design vehicle from safely exiting the crossing.

The lead Engineer shall provide for the effective egress of the typical design vehicle traversing the crossing. The following steps shall be followed during the design process:

- Determine the proper design vehicle expected to traverse the crossing. The design vehicle to be used as a standard is determined by the municipality having jurisdiction over the highway.
- Analyze the turning radius of this vehicle within the proposed design.
- Mitigate the effects of insufficient turning radius within the design.
- The lead Engineer shall demonstrate the effects of the vehicle turning radius and the swept path of the wheels and body of the vehicle on the overall design of the highway and crossing.

3.5.12 Turning Radius Mitigations

The following mitigations shall be implemented to cope with an inadequate turning radius:

- Where multiple lanes are involved, provide for a truck's unobstructed movement, so it may easily traverse the highway-rail grade crossing without being impeded by cross traffic. This may include the use of additional traffic signaling to control cross traffic.
- Consider revising a proposed median design to allow the free movement of the truck. This may require a request for design exception.

Figure 3-9 demonstrates an effective mitigation for an inadequate turning radius. In this example, the AASHTO WB-65 design vehicle is unable to remain in the curb lane throughout its right turn after exiting the crossing. The traffic signal at the intersection, which controls both the movement of the vehicle over the crossing and the cross traffic (and therefore the mitigation), was to modify the signal phasing so that the truck has a clear movement path over the highway-rail grade crossing and onto the adjacent street.

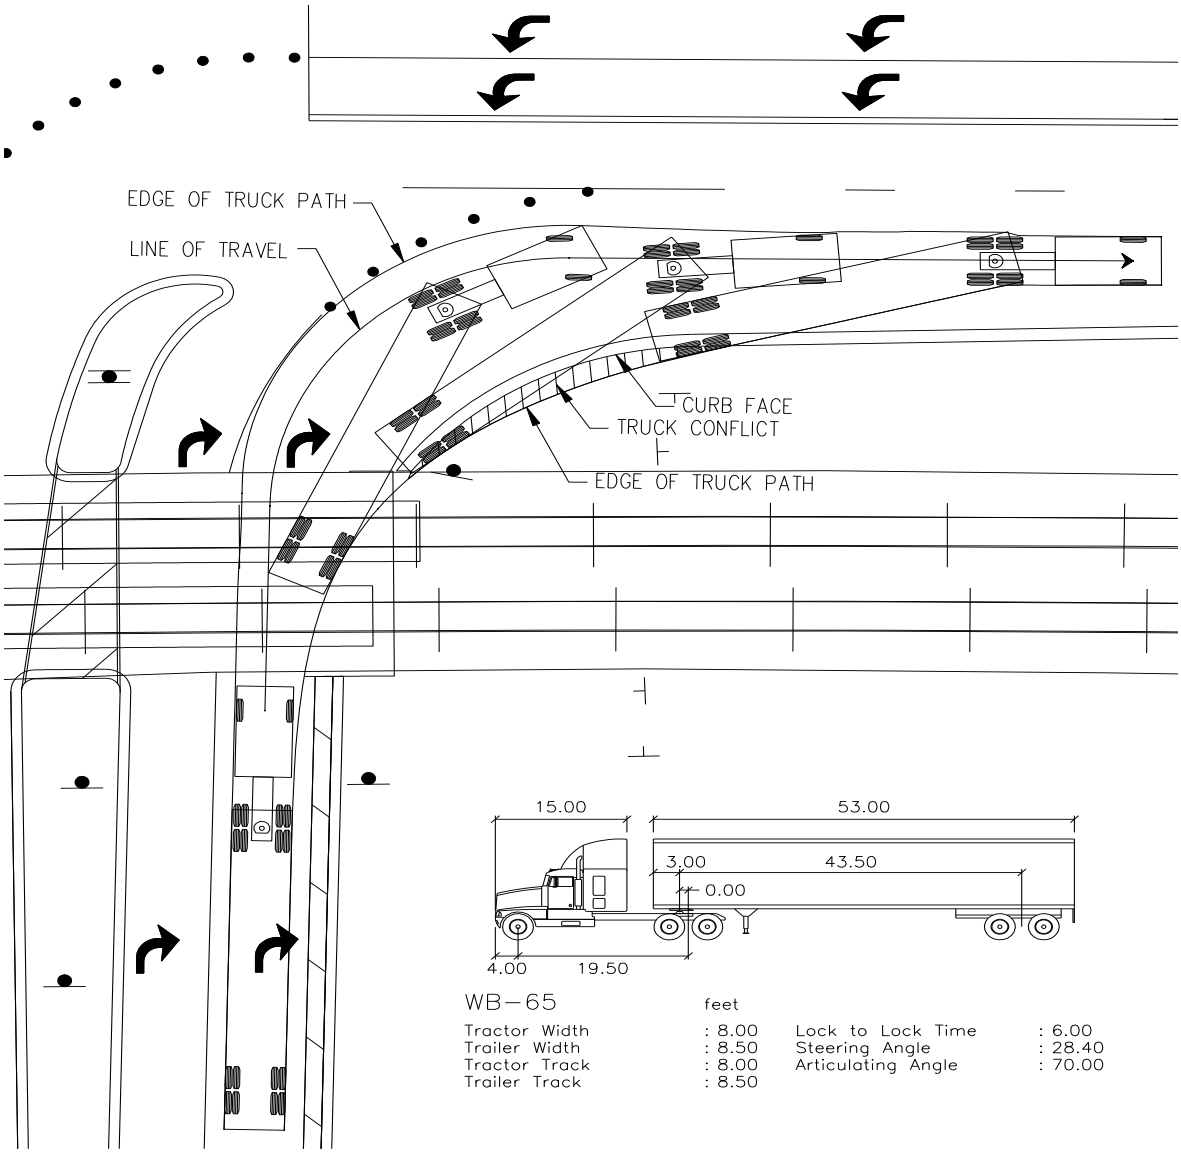

Figure 3-9. Turning Radius of the WB-65 Design Vehicle

3.5.13 Railroad Geometry and Condition of Railroad Facilities

In conjunction with investigating and analyzing the highway geometry in the vicinity of the highway-rail grade crossing, the railroad geometry and condition of the railroad facilities should also be investigated and analyzed to determine compliance with current SCRRA standards and design practices. **If the railroad geometry and facilities in the vicinity of the highway-rail grade crossing do not meet current SCRRA standards, or the railroad facilities are not in acceptable condition, the railroad should be reconstructed to correct any deficiencies.** It is very important to bring the railroad up

© Copyright 2009, SCRRA. All Rights Reserved

to current standards and good condition as part of the overall grade crossing safety enhancement project: it is extremely difficult and costly to coordinate the simultaneous closure of both the railroad and highway for repair, rehabilitation, and construction activities. The overall objective should be to reconstruct both the highway and railroad elements of the highway-rail grade crossing so major repairs or rehabilitation will not be required for 20 to 30 years. Additional information regarding the design of the railroad tracks and highway-rail grade crossing facilities is included in Section 3.17.

A review and analysis of the railroad geometry is particularly important if the highway-rail grade crossing is located within, or near, a railroad curve; or if other special railroad facilities exist near the crossing such as special trackwork (turnouts and crossovers), a passenger station, or a railroad bridge. Preliminary surveys, aerial photographs, and detailed topographic maps of the grade crossing should extend outward along the railroad alignment for 1000 feet or to the end of any curves in both directions for the crossing. The survey should include: the top of rail of any track(s); the amount and location of superelevation; the beginning and end of any spirals and curves; the distance (every 100 feet) between track centerlines; and the limits of the existing grade crossing surface.

Additionally, the location of special trackwork, station platforms, bridges, wayside signals, signal or communication houses, pull boxes, longitudinal utilities (both surface and underground), and the location of all existing active warning devices should be determined. The mapping accuracy of the railroad facilities should be as accurate as the highway facilities: typically one-inch per 40-foot scale. The SCRRA should also be consulted to determine the likelihood of needing additional track or other railroad facilities, or if SCRRA plans include future tracks or other facilities; the lead Engineer should incorporate these future facilities into the plans.

After the survey of the existing railroad geometry and facilities is conducted, the lead Engineer and SCRRA will perform the necessary engineering and condition analysis to determine the changes and modifications required to bring the railroad facilities into compliance with current standards (and to an acceptable condition).

3.5.14 Highway and Railroad Drainage

All surface drainage along the highway approaches to the highway-rail grade crossing and across the crossing itself shall be channeled away from the highway-rail grade crossing to minimize opportunities for hydroplaning within the highway-rail grade crossing and approaches. In particular, the following conditions shall apply to surface drainage within the area of highway-rail grade crossings:

- All surface runoff within the highway-rail grade crossing shall be collected by appropriate drainage devices outside the limits of the track structure. No surface flow shall be allowed to enter the area of the track structure.
- For all approaches to the highway-rail grade crossing, the lead Engineer shall consider highway cross-fall and cross-slope transition at a nominal 2% to the highway gutter.
- The lead Engineer shall demonstrate sufficient drainage and cross-flow within the design drawings.

© Copyright 2009, SCRRA. All Rights Reserved

- Highway and track drainage systems shall be continuous within the limits of the crossing.

Poor drainage is the primary cause of track structure and highway pavement failure. In the initial analysis of a crossing, the lead Engineer shall examine the existing conditions to determine the effectiveness of existing drainage and correct any deficiencies, and shall also produce a Hydraulics and Hydrology (H&H) Report, to be reviewed and approved by SCRRA, which studies onsite and offsite flows, and recommends drainage improvements to be incorporated into the project. Table 3-1 below lists possible drainage issues that warrant consideration, but the scope of the improvements should follow the H&H Report.

Table 3-1. Drainage Considerations

Condition	Possible Reason	Solution
Rough crossing	Track settlement and tie or roadbed failure	Reconstruct track structure and improve drainage and roadbed
"Alligator" pavement adjacent to the highway-rail crossing panels.	Poor drainage of highway and insufficient pavement structure	Install additional catch basins. Re-profile highway to affect surface flow. Reconstruct highway with high quality low maintenance pavement
Rough pavement on approaches	Highway structure failing, or in poor condition	Reconstruct highway profile to affect surface flow. Reconstruct highway with high quality low maintenance pavement.

3.5.15 Level of Service

The term "Level of Service" (LOS) is normally used to describe the performance of a road or street in terms of its operational ability to meet traffic volume demands. LOS describes the operational characteristics of the traffic stream, based on qualitative measures of the highway facility. Factors that characterize LOS include vehicle speed, travel time, freedom to maneuver, traffic interruptions, comfort, and convenience. LOS is a mechanism used by highway departments, or local jurisdictions, to determine if a road is operating at ideal, average, or poor efficiency. The LOS relates the quality of traffic service to given traffic volumes. The Highway Capacity Manual defines six levels of service, designated A through F, with A being the highest (free flow) and F the lowest (extreme congestion). The following factors are used to determine LOS:

Highway Factors

- Number and width of lanes
- Exclusive turn lanes
- Lateral clearance
- Horizontal and vertical alignment
- Number of access points (driveways, alleys, side streets, etc.)
- Drainage

© Copyright 2009, SCRRA. All Rights Reserved

Traffic Factors

- Free-flow speed
- Heavy vehicles
- On-street parking
- Bus stops
- Peak hour factor
- Turning movements

Traffic Control Factors

- Signal phasing
- Signal timing
- Signal cycle length
- Signal coordination
- Pedestrian phasing at crosswalks

Factors other than LOS will affect the overall operation of traffic at a highway-rail grade crossing. For example, a highway may have a LOS of 'A' but also have a downstream driveway that will force traffic to queue back onto the tracks in the event of a right turn into the driveway. To accommodate traffic-related issues, the design of a highway-rail grade crossing should include all aspects affecting the flow of traffic—regardless of LOS.

The LOS is affected by warning devices and signage associated with highway-rail grade crossings. Also, the LOS may directly affect the coordination between traffic signals at adjacent intersections with the highway-rail grade crossing signaling system. Refer to Section 3.14 for additional information.

3.5.16 Traffic Lanes

The following highway-rail grade crossing requirements are contained in General Order 72 of the CPUC:

- **Highway-rail grade crossings shall not be less than 24 feet wide and in addition shall be of a width not less than the traveled approach portions of the adjacent sections of the highway including usable shoulders and sidewalks or pedestrian pathways.**
- Deceleration and acceleration lanes for vehicles required to stop at highway-rail grade crossings should be provided wherever highway agencies determine such lanes are necessary.
- At the time of construction, the surface of the highway shall be installed to conform substantially to the plane of the rails for the entire area between rails, between tracks, and to lines two (2) feet outside the rails.
- Where crossings involve two or more tracks, the top of rails for all tracks are normally in the same plane. The surface of the highway shall be at the same plane as the top of rails for a distance of at least two feet outside of rails for either multiple or single-track highway-rail grade crossings. The top of rail plane shall be connected with the grade line of the highway each way by vertical curves of such length as is required to provide riding conditions and sight distances normally applied to the highway under consideration, per the Caltrans Highway Design Manual or AASHTO publication entitled "A Policy on Geometric Design of Highways and Streets".

© Copyright 2009, SCRRA. All Rights Reserved

- Approach grades of less than 6% are desirable, but where not reasonably obtainable due to local topographical conditions, the gradients in the vicinity of the rails shall be kept as low as feasible.

Often a highway intersection may be immediately adjacent to the highway-rail grade crossing. It is important that vehicles traversing the highway-rail grade crossing be given a clear avenue of escape after or downstream of the highway-rail grade crossing. To clarify, **a vehicle entering the footprint of the highway-rail grade crossing should have an unimpeded means of clearing the crossing.** In cases where there is an intersection adjacent to the crossing, it may be necessary to add a refuge in the cross-traffic direction to allow a design vehicle to clear the intersection and move onto the cross street without constraining the movement of cross traffic.

3.6 MEDIAN ISLANDS

3.6.1 General

Installing raised medians at the centerline of highway approaches to highway-rail grade crossings is an effective way to discourage gate circumvention or making U-turns in the vicinity of the highway-rail grade crossing. As shown in Figure 3-10, the use of a median island(s) minimizes opportunities for violations by creating a well-defined corridor across the tracks. For a two-gate system, installation of median barriers can reduce violations up to 80%t (source: National Safety Council and National Highway Traffic Safety Administration – Cost-Effectiveness Analysis). In addition, FRA's Final Rule on Use of Locomotive Horns lists gates with median islands, or channelization devices, as an approved supplementary safety measure for a quiet zone.

Raised median islands shall be used on both approaches to the highway-rail grade crossing to constrain undesirable traffic movements, such as driving around the automatic crossing gates or making U-turns in the vicinity of the highway-rail grade crossing.

© Copyright 2009, SCRRA. All Rights Reserved

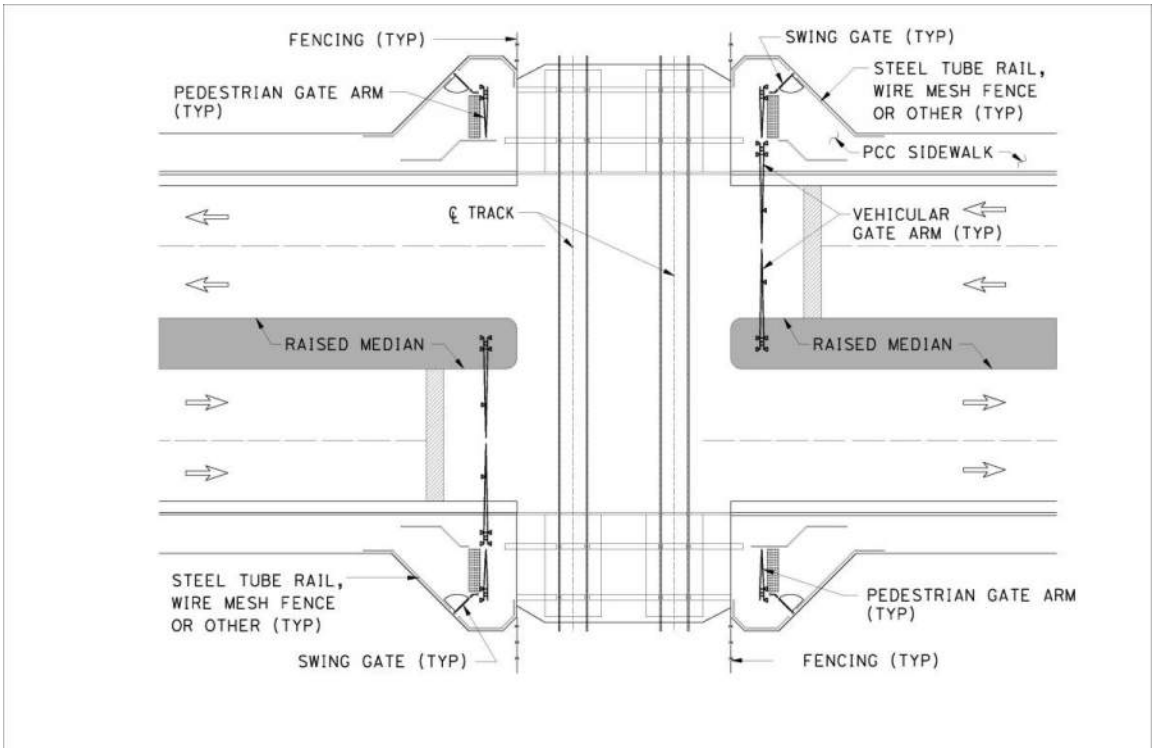

Figure 3-10. Raised Medians at a Highway-Rail Grade Crossing

Criteria for the design of islands is set forth in an AASHTO publication titled A Policy on Geometric Design of Highway and Streets.

Figure 3-11. Effective Use of Medians and Signage

© Copyright 2009, SCRRA. All Rights Reserved

To be effective, a raised median should be centered on the street between both directions of traffic. **On each approach to the highway-rail grade crossing the raised median shall begin 10 feet from the centerline of the nearest track. The end of the median adjacent to the highway-rail grade crossing shall be square, with a six (6) inch radius on the corners** to discourage motorists from making left or U-turns between the medians. Figure 3-11 shows an effective use of median islands.

3.6.2 Median Islands versus Exit Gates

Two mitigation methods can minimize the opportunities for motorists to violate gates:

- The use of a median of sufficient length and height, preferably 100 feet long (measured from the gate) and eight (8) inches high, to prevent motorists from driving around the lowered gate.
- The installation of exit gates, as discussed later in the Manual, at the crossing, blocking motorists from entering the highway-rail grade crossing when gates are lowered.

The preferred minimum length of the median as measured from the highway-rail grade crossing gate shall be 100 feet. A design deviation may be requested where the 100 feet is unobtainable, but in no case shall the median be less than 60 feet. The width of the median shall be nine (9) feet if a warning device is installed in the median and four (4) feet if no warning device is installed in the median. The minimum width of the median may be two (2) feet with the approval of SCRRA and the local highway agency. Raised median curbs shall be eight (8) inches. The median island shall be continuous throughout its length without any breaks. However, there may be instances where an existing manhole or valve box must remain in its current location. In this case, the median shall be designed to accommodate access to these facilities. The lead Engineer shall consider the elimination of manholes, valve boxes, or other features requiring regular maintenance within the approaches to the highway-rail grade crossing

Table 3-2 can be used in the selection and design of medians:

Table 3-2. Standard SCRRA Applications of Medians

Hazard	Option 1	Option 2	Notes
Adjacent driveways	Medians to extend past driveway	Medians extending past the driveway, and shaped to limit vehicular movements	The use of the median shall effectively control vehicular activity at the driveway
Multiple lanes	Install raised medians for additional highway-rail grade crossing gates	N/A	Medians are mandatory in instances where additional gates and lights are needed for proper lane coverage
Light traffic or rural area	Install raised medians		The use of the median shall effectively control vehicular activity

© Copyright 2009, SCRRA. All Rights Reserved

Limited highway right-of-way	Install raised medians	Install raised delineators	The installation of medians can require the acquisition of additional highway right-of-way
Insufficient truck turning radius	Extend median to the maximum length that still accommodates truck movements, and consider exit gates	N/A	Truck turning radius may be a defining component on the use of exit gates
Insufficient right-of-way for a raised median	Acquire additional right-of-way for the installation of the raised median	Consider the use of raised delineators, but only if right of way acquisition is not possible.	The installation of delineation between traffic directions may be needed if the acquisition of additional right-of-way is not an option

The primary median width requirement, per CPUC, is that there shall be a minimum horizontal clearance of two (2) feet between the flashing beacon backplate and the face of the curb. The lead Engineer shall plan for future highway uses when considering the ultimate width of the median. The position of the median gate counterweight, when the gate is in the horizontal position, must be considered.

3.6.3 Median Landscaping

In general, **trees, shrubbery, and similar view obstructing landscaping are not allowed on highway approaches within 100 feet of a highway-rail grade crossing. Low maintenance stamped concrete, pavers, or other hardscape materials shall be the standard landscape treatment for median islands and sidewalk approaches.**

3.7 DRIVEWAYS

The location of driveways, alleys, or similar facilities (with respect to the highway-rail grade crossing) can significantly affect the safety associated with highway-rail grade crossing operations. Driveways associated with railroad-highway crossings are defined as nearside or farside.

- A nearside driveway is defined as a driveway that is located on the crossing approach prior to, or upstream of, the crossing. An example of this type of driveway is shown in Figure 3-12.
- A farside driveway is defined as a driveway located beyond, or downstream of, the highway-rail grade crossing as shown in Figure 3-13.

Driveways (private or public) located within 100 feet of the nearest highway-rail grade crossing active warning gate are strongly discouraged. Driveways within 100 feet of highway-rail grade crossings shall be removed or appropriately reconfigured to achieve safety objectives.

© Copyright 2009, SCRRA. All Rights Reserved

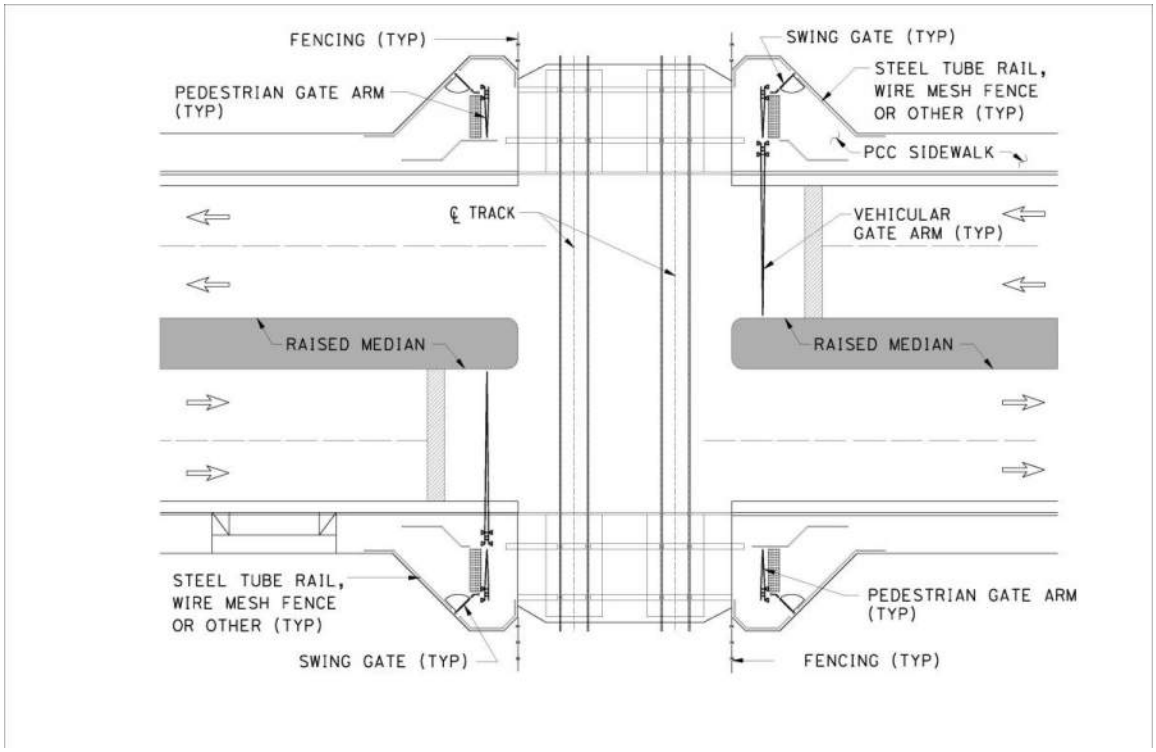

Figure 3-12. Nearside Driveway at Highway-Rail Grade Crossing

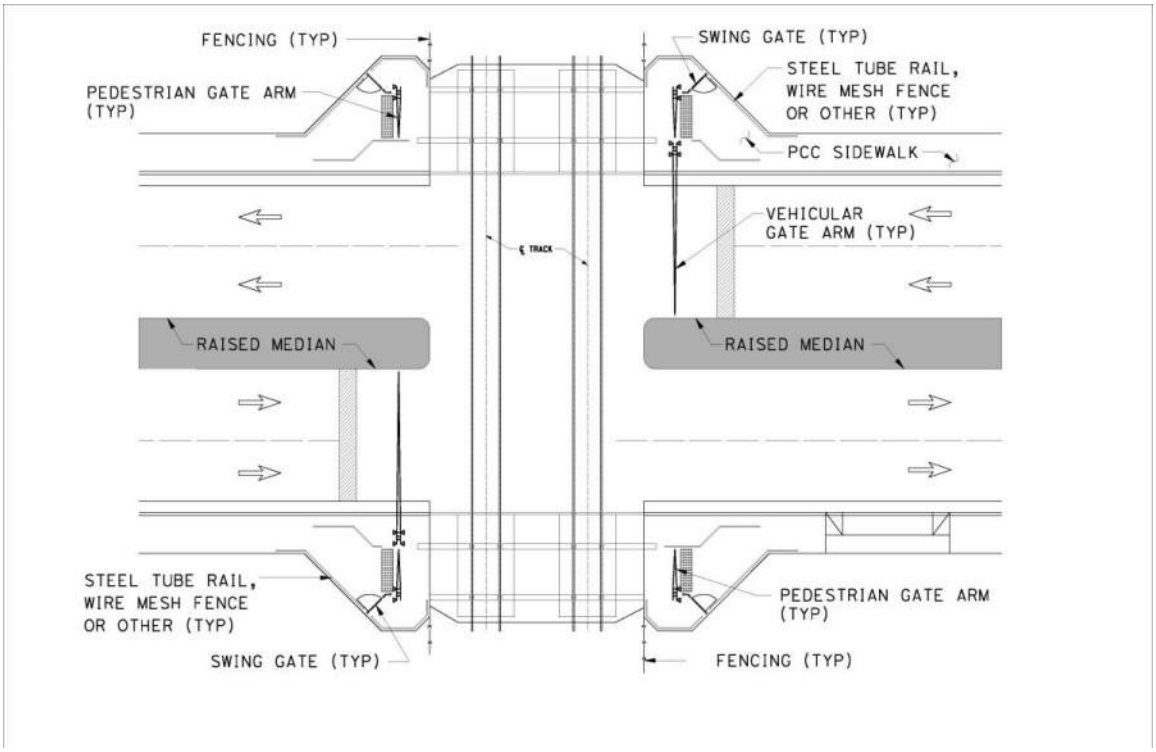

Figure 3-13. Farside Driveway at Highway-Rail Grade Crossing

© Copyright 2009, SCRRA. All Rights Reserved

In addition to preventing vehicles from driving around gates, well designed medians limit movements out of these driveways, thus minimizing vehicle queuing hazards associated with cross-traffic vehicle movements.

Vehicles entering and exiting a driveway immediately adjacent to a highway-rail grade crossing can affect the traffic flow over that crossing. In particular, vehicles making right or left turns into, or out of, the downstream driveway may force approaching traffic to slow or stop, which may result in queuing over the crossing. Where there is an existing nearside or farside driveway, the first choice is to eliminate the left turn into, and out of, the driveway by providing raised median islands, and using other measures coordinated between the highway agency and the property owner. This shall minimize the opportunity for vehicles to be stopped on the tracks by uncontrolled cross traffic.

Another solution for the mitigation of an existing driveway adjacent to a highway-rail grade crossing is the use of a shaped median that allows for a right turn out of the driveway while eliminating turning movements toward the highway-rail grade crossing. An example of this is shown in Figure 3-14, below:

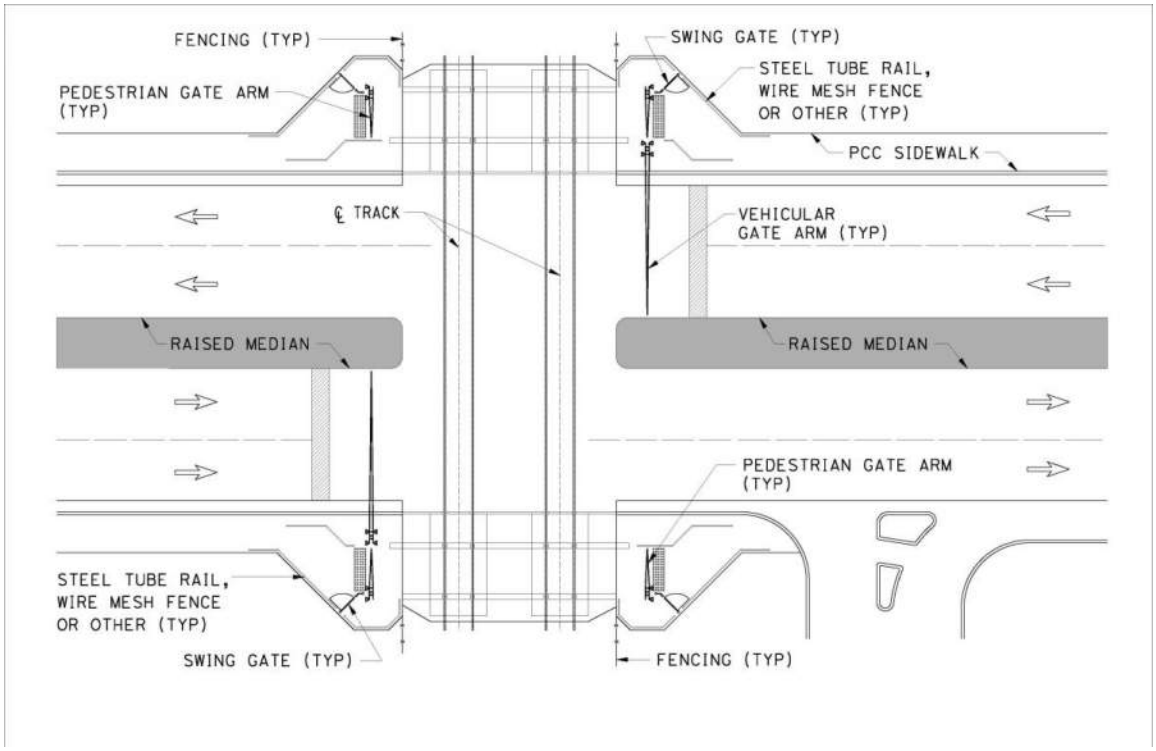

Figure 3-14. Use of a Shaped Median to Control Access

Table 3-3 below shall be consulted for the design of mitigations when driveways are located adjacent to the crossing:

© Copyright 2009, SCRRA. All Rights Reserved

Table 3-3. Standard Mitigations for Driveways Adjacent to the Crossing

Driveway Location	Medians	Signage	Warning Gates	Traffic Control
Nearside	• Yes	R3-5 (RT) "Right Turn Only" sign	• Installed at entrance quadrant	Consider traffic signals in cases of large driveway volumes
Farside	• Yes • Install island at the driveway to prohibit left turns toward the tracks (see Figure 3-14)	R3-5 (RT) "Right Turn Only" sign	• Installed at entrance quadrant • As a last option, consider exit gates if there is a possibility of unsafe access through the median	Consider traffic signals in cases of large traffic volumes

During the design of the crossing, consider the type of vehicle that will use the driveway and how the driveway will be used. The actions of vehicles and motorists using the highway-rail grade crossing should be observed during the diagnostics and field reviews, and findings incorporated into the design.

Driveways adjacent to a highway-rail grade crossing which require vehicle reversing (backing) movements shall not be allowed and the local highway agency shall prohibit the reversing moves. To clarify, if the driveway can only be accessed by a backing movement by the design vehicle, then this driveway will need to receive one of the following mitigations to eliminate this unsafe and illegal way to access the driveway:

- Relocate the driveway so as to provide sufficient turning capability for the design vehicle.
- Modify the loading/unloading area/location so as to provide sufficient turning capability for the design vehicle.
- Widen the highway so the design vehicle can exit the travelled way, and provide sufficient turning capability for the design vehicle.

In some instances, there may be a nearside driveway that leads to a truck loading dock (See Figure 3-15 for an example of this). In this case, the truck may drive past this nearside driveway, back over the tracks and, while backing up, turn into the nearside driveway to line up to access the loading dock. **The design and actual usage of the driveway shall preclude the movement of vehicles over the tracks while ingressing or egressing the driveway.**

In such instances, the agency shall endeavor to close the nearside driveway or work with the adjacent property owner to control this access or address the unsafe practices. **Special traffic signage shall be installed to control undesirable traffic movements, especially reverse or slow movements into or out of driveways near tracks.**

Figure 3-15. Loading Dock Adjacent to Right-of-Way

3.8 SIDEWALKS AND PAVEMENT APPROACHES

Sidewalks and pavement approaches to the highway-rail grade crossing shall be constructed using hot mix asphalt concrete between the zero curb line and the panels. Refer to SCRRA Engineering Standards for the location of the zero curb line.

3.9 VISIBILITY

It is SCRRA's policy to work jointly and responsibly with highway agencies, and other adjacent private property owners, to ensure that proper visibility is maintained. Buildings, fences, walls, billboards, highway geometry, trees, vegetation, natural or man-made embankments, or other man-made structures will play a significant role in the overall visibility at the highway-rail grade crossing, and these features will become important in the geometric design process. The vehicle operator should detect the presence of the highway-rail grade crossing, identify and react to the type of traffic control devices at the crossing, and determine whether a train is approaching or occupying the crossing. According to CA MUTCD, all advance warning signing, pavement markings, and highway-rail grade crossing warning devices should be clearly visible to the approaching motorist.

Horizontal and vertical curves within the highway near, or at, the crossing create additional concerns. In cases where the sight distance is not sufficient to allow adequate braking prior to the crossing, the lead Engineer should examine the need for advance warning devices.

© Copyright 2009, SCRRA. All Rights Reserved

Of particular concern is stopping sight distance near and across the highway-rail grade crossing. Refer to Sections 3.5.7 and 3.5.8 for highway geometry. The lead Engineer shall examine all aspects of the highway geometry and follow the Caltrans Highway Design Manual or AASHTO publication titled "A Policy on Geometric Design of Highways and Streets" for stopping sight distance requirements. The railroad right-of-way often abuts developments consisting of structures which prevent the motorist from clearly seeing down the tracks when approaching the crossing. During the design phase, the lead Engineer shall endeavor to investigate all measures for improving visibility at these crossings, and mitigate any detected hazards.

The following actions should be taken during the design of a grade crossing to preserve visibility:

- Prohibit new trees at highway-rail grade crossing approaches and medians, and ensure existing trees are trimmed for proper visibility.
- Prohibit new ground covers or shrubs exceeding 36 inches in height, and ensure the existing trees are trimmed for proper visibility.
- Investigate the possibility of mitigating the effects of adjacent development on overall visibility at the crossing.
- Ensure stopping sight distances are per the Caltrans Highway Design Manual or the AASHTO publication titled "A Policy on Geometric Design of Highways and Streets".
- **Vehicle parking within 100 feet of the highway-rail grade crossing, as measured from the furthest automatic warning device from the tracks, shall be prohibited.**

Figure 3-16 is an example of how visibility can be impaired at a highway-rail grade crossing by highway geometry and landscaping. Note the following items:

- Advance signs are obscured by trees.

  Mitigations: Avoid the planting of trees adjacent to advance signs.
  Work with the highway agency to adequately maintain trees and landscaping.

- Advance visibility of vehicles downstream of the highway-rail grade crossing is impeded by geometry. The vertical curve at the highway-rail grade crossing may prevent the motorist from seeing possible highway obstructions concealed by the highway profile.

  Mitigations: To the extent possible, design highway geometry to eliminate these cases.
  Install advance warning to warn motorists.

© Copyright 2009, SCRRA. All Rights Reserved

Figure 3-16. Restricted Visibility at a Highway-Rail Grade Crossing Approach

Regular trimming of vegetation along the approaches to the highway-rail grade crossing is an important responsibility of the highway agency or private property owner.

3.10 SIGHT TRIANGLES

It is SCRRA's policy to work jointly and responsibly with highway agencies, and other adjacent private property owners, to ensure that improvements to properties adjacent to the railroad corridor, and particularly at highway-rail grade crossing, are designed so as to mitigate the effects of the development on highway-rail grade crossing safety.

A sight triangle is the triangular area of visibility required to allow a driver to see an oncoming train (approaching from either direction) in advance of the crossing. The stopping sight distance is measured along the highway and is a function of the distance required for the design vehicle, traveling at the posted speed limit, to stop safely.

The use of the sight triangle for highway-rail grade crossing design is an effective tool for the development of the overall design, as well as to mitigate the effects of restricted visibility. The FHWA handbook shows a calculation used to determine sight triangle distances. Unfortunately, urban areas seldom have the proper site triangle (as shown in the FHWA handbook). In these cases, signal timing, and highway-rail grade crossing warning device timing, must provide adequate warning to enable the motorist to stop prior to the crossing.

© Copyright 2009, SCRRA. All Rights Reserved

The effects that commercial or residential development can have on the visibility at a highway-rail grade crossing are shown in Figure 3-17. The sight triangles for this highway-rail grade crossing show the effective visibility of the highway-rail grade crossing from the motorist's perspective. This figure demonstrates the effect on overall visibility when buildings are placed adjacent to the right-of-way. The solid green fill shows a constricted sight triangle resulting from the location of proposed buildings on a development site adjacent to the railroad right-of-way.

Figure 3-18 demonstrates the same building configuration relocated to the backside of the property, which results in much improved visibility of the track area. Although this realignment of the buildings does not alter or impair the overall use of the property, it is an effective way of improving visibility and places driveways away from the highway-rail grade crossing.

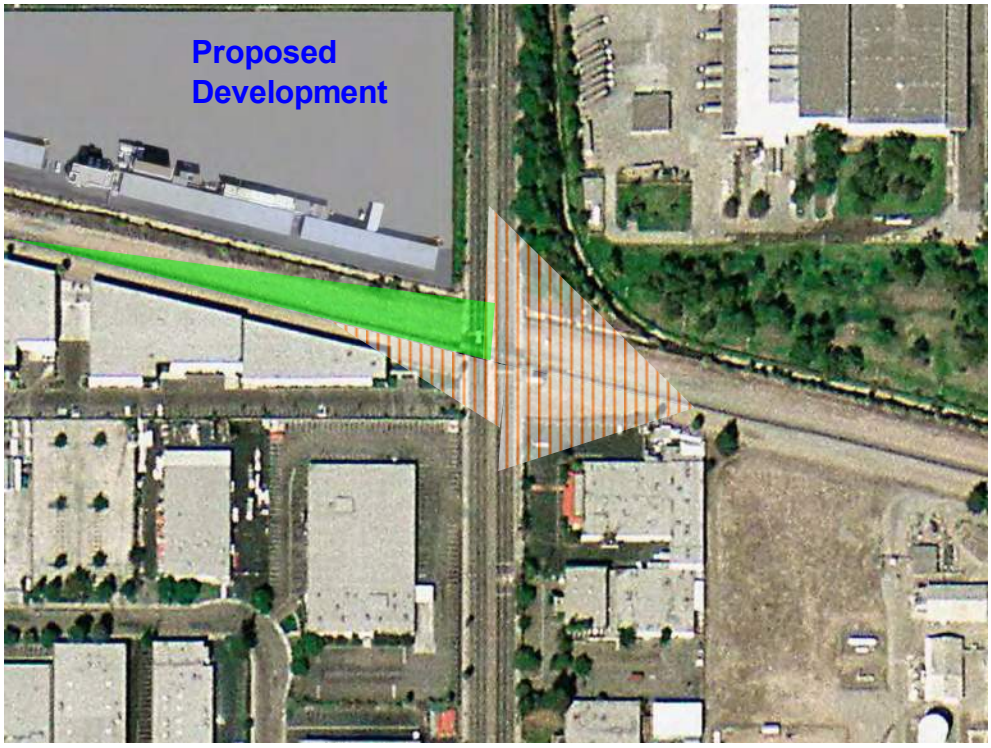

Figure 3-17. Sight Triangle Impeded by Adjacent Buildings

Figure 3-18. Sight Triangle Enhanced through Alternative Placement of Buildings

3.11 PASSIVE TRAFFIC CONTROL DEVICES

Passive warning devices are traffic control warning devices not activated by trains, vehicles, or pedestrians. Passive warning devices provide static messages of warning, guidance, and (in some instances) mandatory action for the driver. Their purpose is to identify and direct attention to the location of a highway-rail grade crossing in order to permit motorists, bicyclists, and pedestrians to take appropriate action. Passive warning devices consist of regulatory, warning, and guide signs, along with supplemental pavement markings. These basic devices are incorporated into the design of active traffic warning devices. The application of passive devices is defined in Part 8 of the CA MUTCD.

3.11.1 Signage

The application of signage at highway-rail grade crossings is defined in Part 8 of the CA MUTCD. The lead Engineer shall follow the requirements within this section for the proper application of highway signs at the crossing.

In addition to highway signs to be installed at the highway-rail grade crossing, there may be additional signs required, such as, “No Trespassing”. Installation of “No Trespassing” signs on the SCRRA member-owned right-of-way shall be installed per SCRRA Standards.

The highway agency is responsible for approving the use of highway signs, and coordination between highway agency and the lead Engineer is required.

© Copyright 2009, SCRRA. All Rights Reserved

3.11.2 Pavement Markings

Striping and pavement marking are defined within Part 8 of the CA MUTCD. SCRRA has defined additional striping and delineation requirements that apply to highway-rail grade crossings. These measures include the following:

- Striping along edge of travel way: (SCRRA Engineering Standards 4004)
- Striping between medians: (SCRRA Engineering Standards 4004)
- Possible use of "Keep Clear" pavement markings: (Caltrans)

Maintenance responsibilities for striping and pavement markings are to be defined in the C&M. Also, refer to CPUC GO 75. Generally, the highway agency maintains the highway striping. The lead Engineer is to refer to the configuration and location of striping shown in Chapter 8 of the CA MUTCD. In addition, the lead Engineer is directed to SCRRA Engineering Standards for pavement markings within the limits of the crossing.

The highway agency is responsible for approving the use of highway pavement markings, and coordination between highway agency and the Engineer is required.

3.12 ACTIVE TRAFFIC CONTROL DEVICES

All SCRRA "main track" highway-rail grade crossings should be equipped with active warning devices used to warn vehicles and pedestrians of potential hazards at the crossing, in accordance with the GO 75 of the CPUC, this Manual, and the CA MUTCD. Furthermore, it is SCRRA's policy to require that any new SCRRA "main track" private highway-rail grade crossing shall be so equipped with standard equipment at the private owner's expense. (Refer to Appendix B for the definition of SCRRA "main track").

Each of these types of devices is designed to fill a need at the highway-rail grade crossing to effectively warn of approaching trains. The placement of these devices is an important factor in the development of the highway-rail grade crossing, and must be considered during design. It should be noted that these devices may be installed at locations other than at highway-rail grade crossings to ensure proper advance warning of oncoming trains.

Each warning device is constructed on a substantial foundation required for the safe support of the device. These foundations may take up a broad area and must be considered in the placement of the device. The utilities and drainage associated with the highway-rail grade crossing shall be considered when developing the overall layout of the devices. Additionally, the position of present and future foundations must be taken into account when considering utility encroachment—it may be necessary to relocate utilities and other facilities that could interfere with these foundations.

The placement of active warning devices is an important factor in the overall design process. Baseline criteria have been developed to use for guidance in the placement of the highway-rail grade crossing devices.

Warning gates are physical barriers that obstruct the entrance to the highway-rail grade crossing upon activation by an approaching train. The railroad signaling system activating these devices is further defined within the SCRRA's signal and communication standards. Standard applications of warning gates and flashing signals (Automatic

© Copyright 2009, SCRRA. All Rights Reserved

Warning Devices) are shown in Figure 3-19 through Figure 3-22. In addition, a cross-buck, and a sign indicating the presence of multiple tracks at the crossing, would be mounted on each gate to indicate the presence of multiple tracks at the crossing.

Flashing signals are mounted on the mast or on an overhead cantilever to provide a visual warning of an oncoming train. These lights are directed toward the approach. In some cases (such as with adjacent driveways and highway), additional auxiliary lights are necessary to provide visual warning for each approach to the crossing.

Some applications of flashing signals include backlights mounted on the mast in addition to the standard flashing signal configuration. *SCRRA's policy is to discourage the use of backlights on exit gates to avoid motorist confusion.* The use of backlights shall be evaluated to determine the necessity of their use and the possibility for motorist confusion.

© Copyright 2009, SCRRA. All Rights Reserved

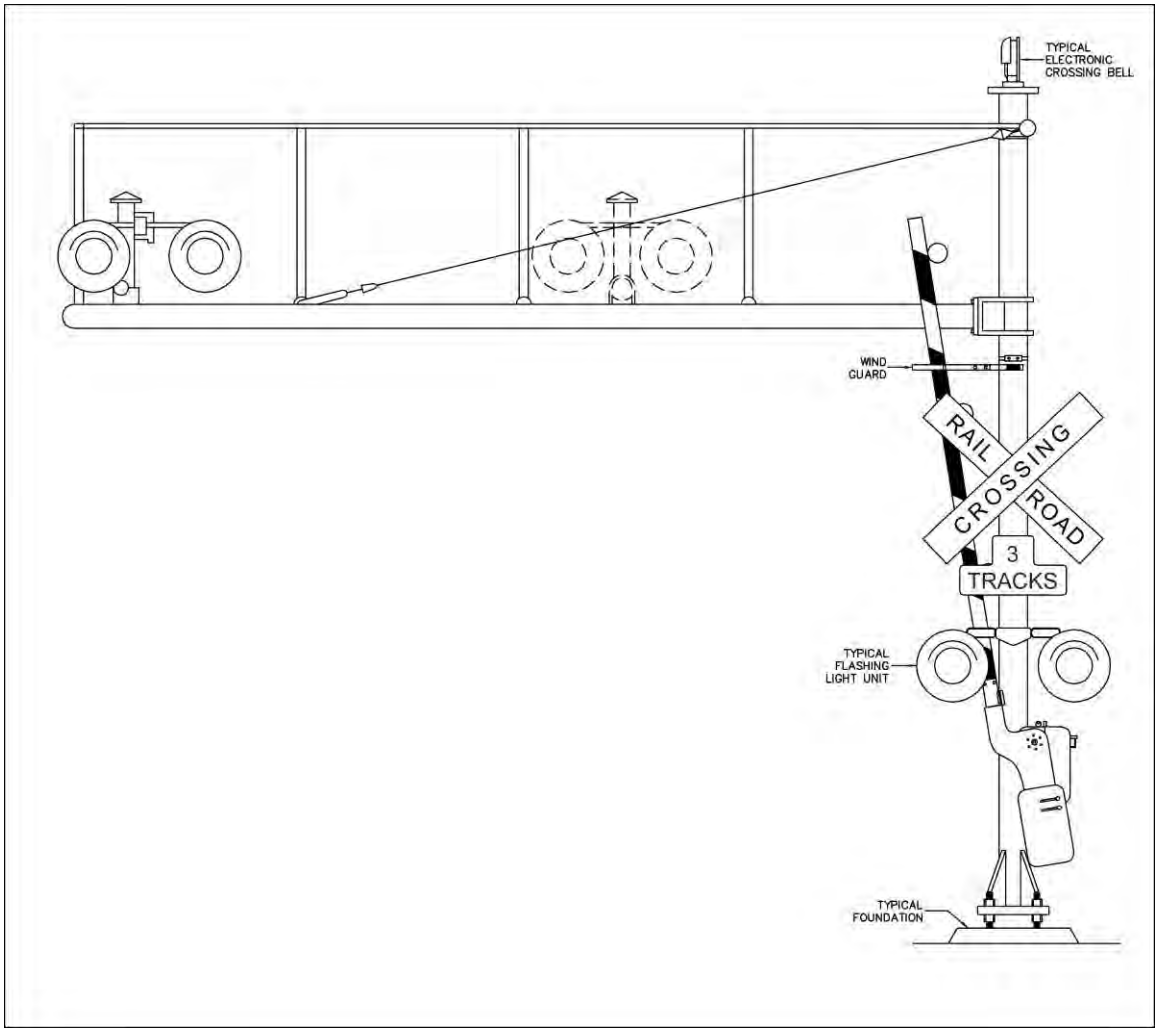

Figure 3-22. Active Warning Device Mechanisms – Standard No. 9-A

For additional information on the various types of warning devices, refer to CPUC General Order No. 75.

As mentioned previously, it is SCRRA standard to provide flashing lights for each traffic lane approaching the highway-rail grade crossing. For more detailed information on the location, dimensions, and selection of warning devices, refer to SCRRA's Engineering Standards for signals and communications.

When the use of a No. 9 Gate (see Figure 3-21) is defined by SCRRA's Engineering Standards, the flashing light mounted on the mast shall provide warning for the curb and the traffic lane. If there is more than one lane, and highway width is greater than the maximum length of the single gate arm, an additional device will be required adjacent to the second lane. A No. 9-A cantilever signal (see Figure 3-22) may be used in order to place the light over the traffic lane.

Where pre-signals are installed, the lead Engineer and the diagnostic team shall evaluate the locations of both the railroad and traffic signaling to ensure the combination

© Copyright 2009, SCRRA. All Rights Reserved

of traffic lights and highway-rail grade crossing warning lights is coordinated and do not conflict with one another, thus mitigating possible confusion for motorists approaching the tracks.

3.12.1 Two-Quadrant Gate Systems

Standard gate systems utilize gates installed in the entrance, or upstream, quadrant of the highway-rail grade crossing. These gates are intended to prevent the motorist from proceeding into the path of the train when the gate is in the horizontal position. See Figure 3-23 below.

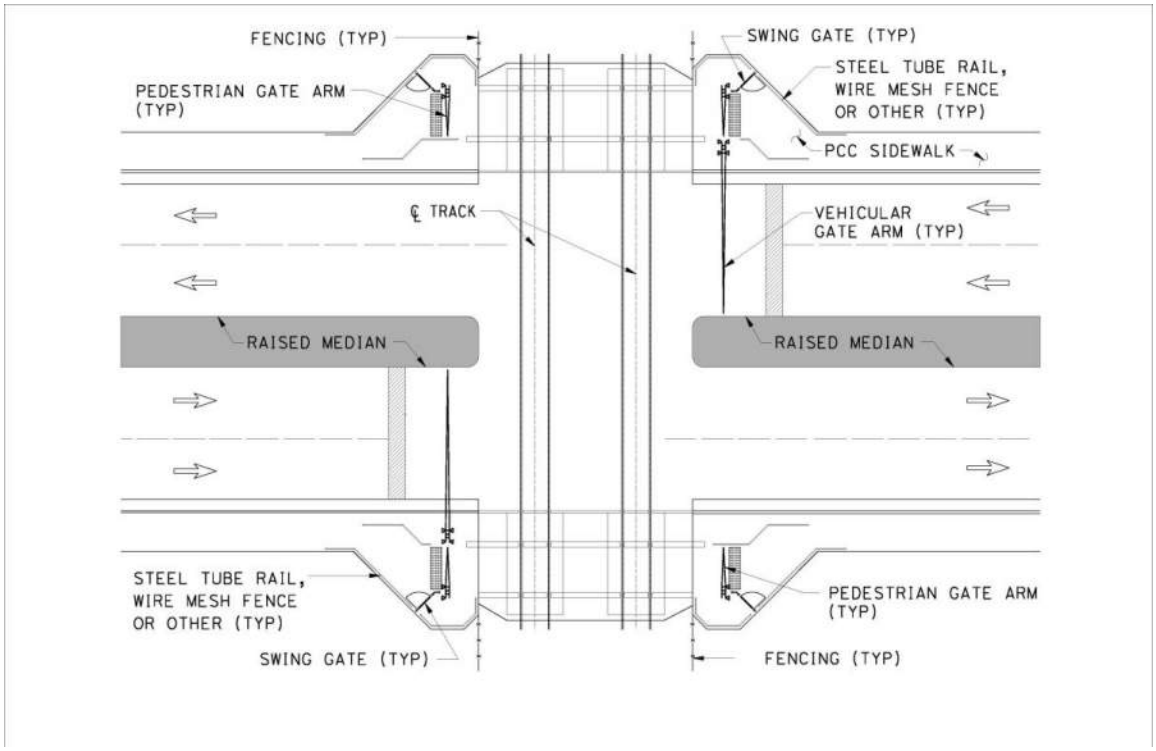

Figure 3-23. Two-Quadrant Gate System

3.12.2 Exit Gate Systems

SCRRA standards call for a raised median (refer to Section 3.6 for additional discussion) instead of an exit gate (with the exception of a highway-rail grade crossing within 100 feet of an intersection with a parallel highway, as discussed below). However, in some applications a raised median may not be possible due to the conditions at the highway-rail grade crossing. In cases such as these, an exit gate may be used as a last resort, but will require a request for a deviation then approval from SCRRA.

Exit gates are seldom used with raised medians of substantial length unless there are extenuating circumstances. Even so, they are discouraged by the SCRRA. This is primarily due to the redundancy in the systems and the long term life-cycle costs of repairing, maintaining, and replacing exit gates as compared to medians. For example, a raised median with exit gates may be utilized where there is an adjacent driveway to the

© Copyright 2009, SCRRA. All Rights Reserved

crossing. This will prevent an illegal turn out of the driveway and onto the crossing. An example of an exit gate system is shown in Figure 3-24.

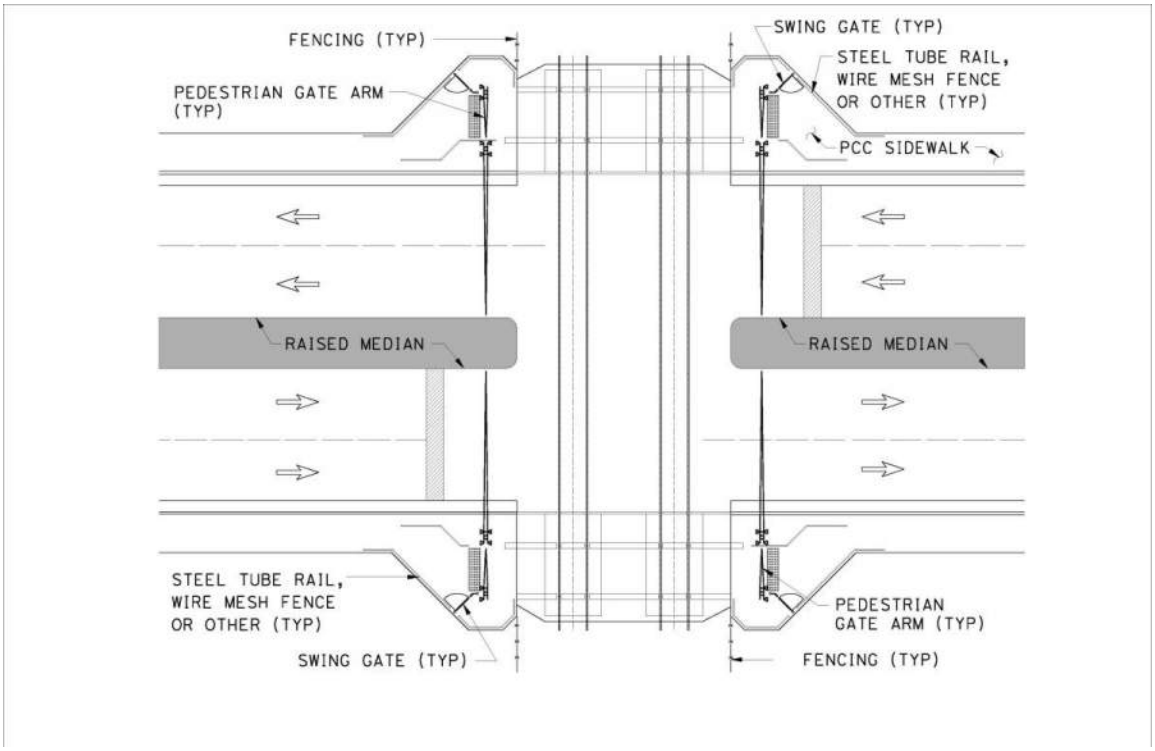

Figure 3-24. Exit Gate Systems

Highways parallel to the tracks present a unique challenge. At an intersection with a highway, access to the track area by traffic turning toward the tracks, particularly a left turn, creates safety situations that should be addressed in design. **For intersections within 100 feet of the highway-rail grade crossing with multiple main tracks, an exit gate shall be installed to prevent left turn movements accessing the track area.** This is shown in Figure 3-25.

© Copyright 2009, SCRRA. All Rights Reserved

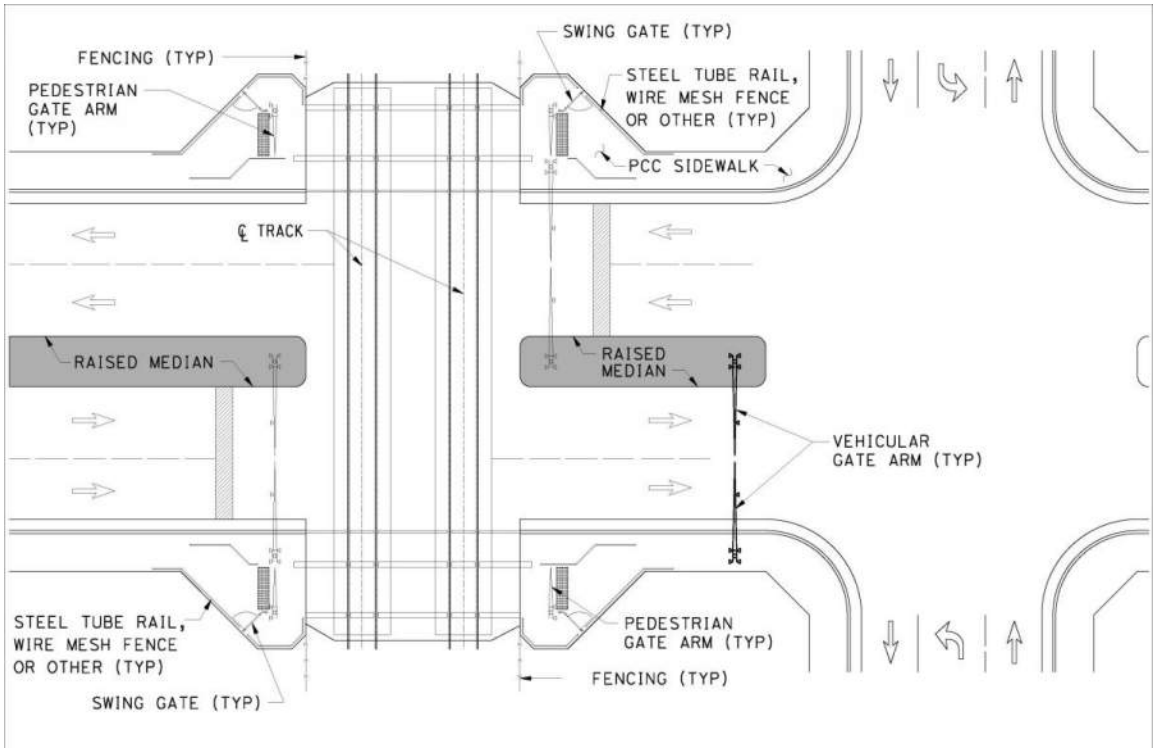

Figure 3-25. Exit Gate Installation near an Intersection

The inclusion of exit gates requires the installation of induction loops that are part of the vital crossing signal system within the pavement. *It is SCRRA's policy to maintain these loops when they are integrated into the vital railroad signal system.* It is important to factor the maintenance of these into the overall C&M Agreement for the highway-rail grade crossing. Refer to SCRRA Engineering Standards for further discussion on the use of induction loops.

The following protocols shall be observed during the engineering and construction of these induction loops:

- The lead Engineer shall refer to SCRRA Engineering Standards for placement of induction loops through the crossing.
- The lead Engineer shall refer to SCRRA Engineering Standards as a minimum standard for the pavement structure through the crossing; shall verify the pavement section through appropriate engineering analysis; and enhance the specifications as necessary to meet the needs of the design. Low maintenance high quality pavement sections shall be installed within 50 feet of the highway-rail grade crossing.
- The lead Engineer shall include within the construction specifications a mandate that the contractor shall not install pavement within the limits of the highway-rail grade crossing and the induction loops without the review and approval of the SCRRA.
- The highway agency having jurisdiction over the highway shall execute a C&M Agreement defining the induction loops, as well as the division allocation of maintenance responsibilities and costs regarding the crossing.

© Copyright 2009, SCRRA. All Rights Reserved

Table 3-4 below can be a used as a reference for the installation of gates.

Table 3-4. SCRRA Standard for Gate Installations

Number of Approach Lanes	Raised Median	Option 1	Option 2	Option 3
1	No	Two No. 9 devices	N/A	N/A
1	Yes	Two No. 9 devices	N/A	N/A
2	No	Two No. 9-A devices	N/A	N/A
2	Yes	Two No. 9-A devices	Four No. 9 devices	Two No. 9 devices with a cantilever
3	Yes	Two No. 9-A devices Two No. 9 devices	N/A	N/A
4	Yes	Four No. 9-A devices	N/A	N/A

3.12.3 Measures to Counter Potential Gate Violations

When analyzing a highway-rail grade crossing for gate placement, it is important to assess the opportunities that motorists will have to drive around the lowered gate. Many conditions exist that promote such opportunities. Three of these are listed below:

- Higher traffic counts, and the resulting delays at the gates.
- In locations, or at times when there is light traffic, presenting less restrictions to gate violation.
- In locations where the vehicle crossing is adjacent to a station where dwell times within the station cause longer gate down time.
- The proximity of driveways or intersections that provide opportunities for gate violations.

The lead Engineer, along with diagnostic team, shall analyze the project location to assess the need to install median islands, lengthen existing median island(s), or to include exit gate(s) in order to counter potential or observed gate violations.

3.13 ADJACENT CROSSWALKS

Pedestrian crosswalks parallel and adjacent to highway-rail grade crossings are strongly discouraged. Pedestrians using these crosswalks may cause vehicles to queue over the highway-rail grade crossing without an avenue of escape. Active measures should be taken to prohibit access using signage and barricades. A request

© Copyright 2009, SCRRA. All Rights Reserved

for a deviation from the recommended design practices and standards must be submitted

Figure 3-26 below is an example of how the presence of pedestrians can inhibit vehicular traffic from clearing the track area.

Figure 3-26. Pedestrian Crosswalk Parallel and Adjacent to a Highway-Rail Grade Crossing

3.14 ADJACENT HIGHWAY-RAIL GRADE CROSSINGS

The location of adjacent highway-rail grade crossings should generally be noted and analyzed with the operation of the subject highway-rail grade crossing. Separate railroad operations on the adjacent highway-rail grade crossing may cause vehicles waiting behind lowered gates to queue back over the adjacent highway-rail grade crossing. In these situations, the location and proximity of the operations will have a large impact on the overall design.

At locations where there is a possibility of vehicles queuing over a highway-rail grade crossing, the lead Engineer shall coordinate the design with the owners and operators of both highway-rail grade crossings to develop a solution to avoid vehicles being trapped

© Copyright 2009, SCRRA. All Rights Reserved

between the highway-rail grade crossings or over the adjacent highway-rail grade crossing.

3.15 TRAFFIC SIGNALS

The placement of traffic signals depends upon the proximity of the highway intersection to the highway-rail grade crossing, alley intersections, driveway intersections, vehicle queuing, and the impact of adjacent traffic control devices on the operation of the highway-rail grade crossing. The lead Engineer shall consider several factors when deciding on the inclusion of a traffic signal into highway-rail grade crossing system, some of which are listed below. In addition, the lead Engineer should conduct queuing studies during traffic peak-hours to accurately assess actual traffic conditions at the project site.

- Traffic congestion should be minimized along the highway that crosses the railroad tracks. Various factors affect the operation of traffic at the highway-rail grade crossing and tend to cause traffic to queue over the tracks.
- The presence of a traffic signal downstream, or upstream, of the highway-rail grade crossing may tend to generate long traffic queues that could back up over the tracks.
- CA MUTCD Part 8 Section 8D.07 recommends the preemption of traffic signals located within 200 feet of the highway-rail grade crossing. In addition, Section 8D.07 suggests preemption may be appropriate for longer distances, depending upon vehicle queuing. Refer to Section 3-16 of this Manual for additional information on preemption.
- The location of a nearby stop-controlled intersection may tend to cause traffic to back up into the highway-rail grade crossing, especially during peak traffic hours.

Some commonly used mitigation measures are as follows:

- Traffic signal coordination, including the installation of queue-cutter signals, pre-signals, and/or turning movement prohibitions.
- Replace the stop control with a preempted traffic signal.

3.15.1 Adjacent Stop Controlled Intersections

Adjacent stop controlled intersections should generally be avoided in all instances. Vehicles traversing the highway-rail grade crossing should have a clear path over the crossing that is unimpeded by vehicular cross traffic. The existence of a stop sign controlling vehicular movements over the crossing may force vehicles to wait for cross traffic to clear before proceeding. In cases where there is limited distance between the highway-rail grade crossing and the adjacent intersection, or significant vehicular traffic over the highway-rail grade crossing, vehicles can queue over the highway-rail grade crossing without a means of escape.

3.15.2 Design Scope

This section establishes the basic traffic engineering criteria to be used in the design of traffic signal systems affected by SCRRA's operations.

© Copyright 2009, SCRRA. All Rights Reserved

The design shall specify all traffic signal equipment, including: traffic signal controller assemblies, the railroad interconnection system, lighting systems, sign illumination systems, communication systems electrical equipment, and provisions for future systems, and any combinations thereof. *The design shall incorporate equipment that has been proven to be reliable, durable, and effective on the SCRRA or other major Class 1 inter-city passenger or commuter railroad systems, and already is or can be readily incorporated in current SCRRA System active warning devices.* In order to provide this, the lead Engineer shall coordinate with SCRRA forces for advice/direction regarding this matter.

The design shall incorporate features and equipment that are familiar to the SCRRA Engineering, Construction and Maintenance staff and contractors and that will contribute to the inspection, testing, repair operations, and maintenance of the traffic signal system. Any new testing procedures, or methods required by new equipment, must be identified and submitted to SCRRA and the highway agency for consideration and approval before implementing the new equipment and procedures.

All designs shall be submitted for SCRRA approval in accordance with Section 7.9 "Submittals" of this Manual. The local highway agency shall also approve the design of the traffic signal system.

3.15.3 Traffic Signal Standards

Traffic signal systems shall be designed in accordance with the standards and practices of the stakeholder having jurisdiction over the specific traffic signal system. The most current version of the applicable standards in effect at the time of proposal submission shall be used.

The design shall adhere to the latest version of CA MUTCD and the local jurisdiction's design criteria for traffic signals, or to a separate criterion specifically established by the local jurisdiction. Any new or modified traffic signal system shall be coordinated and integrated into the civil and track design to provide a seamless interface between the design disciplines.

3.15.4 Traffic Signal Design

As per the CA MUTCD, if preemption is provided at a signalized intersection, the normal sequence of traffic control signal operation shall be interrupted by the railroad (preempted upon the approach of a train). The sequence of traffic signal and railroad warning system operations during the interruption shall avoid entrapment of vehicles on the highway-rail grade crossing (entrapments that might result from conflicting displays in which the traffic control signals are green, even while the railroad active warning flashing-light signals are active). **During the preemption hold interval, the traffic signal indications shall prevent vehicles from moving toward the track area.** All turning movements toward the highway-rail grade crossing that are currently permitted shall be prohibited during the signal preemption sequences. **A blank-out, changeable message sign, appropriate highway signal indication, or other similar control shall be used to prohibit turning movements toward the highway-rail grade crossing during preemption**. The R3-1 and R3-2 blank-out signs that are to be used as appropriate for turn prohibition are shown in Figures 3-27 and Figure 3-28. Turn prohibition blank-out signs that are associated with preemption shall be visible only when

© Copyright 2009, SCRRA. All Rights Reserved

the highway-rail grade crossing restriction is in effect. For signalized intersections that display a red indication, during preemption, to restrict all movements across the tracks, an R10-11 blank-out sign may be used.

The R3-1, R3-2, and R5-1 blank-out signs are typically placed where they may most easily be seen by the motorist intending to make a turn. The R3-1 should be placed over the highway in line with the right-turn lane, or at the right corner of the intersection. The R3-2 should be placed over the highway in line with the left-turn lane adjacent to the left-turn signal indication, or on the median (in line with the left-turn lane). The R5-1 should be placed appropriately for the movement being restricted.

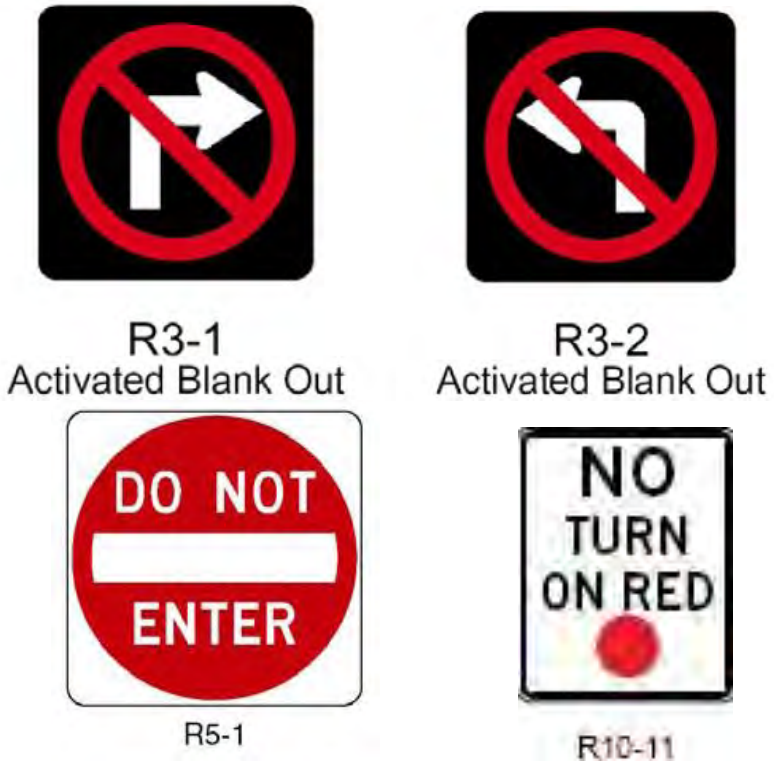

Figure 3-27. Turning Movement Blank-Out and Associated Signs

Figure 3-28. Turning Movement Blank-Out Sign

© Copyright 2009, SCRRA. All Rights Reserved

As per the CA MUTCD, whenever a traffic signal is provided with emergency vehicle preemption and railroad preemption, the railroad preemption shall have priority. In the event of a demand for emergency vehicle preemption during the time the intersection is operating on railroad preemption, the railroad preemption sequence shall continue unaffected until completion. In the event of a demand for railroad preemption during emergency vehicle preemption operation, the railroad preemption function shall immediately assume control of intersection operations. However, traffic signals may be used to enhance the control of highway users at highway-rail grade crossings.

A detailed analysis shall be conducted for any planned signalized intersection to properly define the lane geometry and configuration. The objective is to efficiently control the signalized intersection and maintain a reliable railroad operating system.

Traffic signal system design shall incorporate input from the stakeholders having jurisdiction over the signal system. A traffic signal system plan shall be prepared for each new or revised traffic signal system. The traffic signal system plan shall be in a format acceptable to the stakeholder having jurisdiction over the signal system, and shall be prepared by a professional traffic Engineer registered in the State of California.

The following general criteria shall apply:

- Traffic signals, pedestrian signals, and any special signs and signals required shall be designed and installed in accordance with the local jurisdiction's specifications.
- Where there are existing conductors, interconnecting traffic signals, and railroad signals, they may be used if in good condition and adequate for the desired type of interconnection. See Section 6.10 for information on interconnection circuitry. New traffic signals shall be integrated into the existing or modified system, as appropriate, in accordance with the local jurisdiction's standards and specifications, and SCRRA requirements.
- The traffic signal lead Engineer shall be responsible for coordinating with the appropriate local utility company to determine the source of power and the utility company's requirements for each new or revised traffic signal and safety lighting system.
- The design and placement of vehicle induction loops near the tracks shall be coordinated with SCRRA railroad signal engineers.
- *Where the traffic signal system design requires the removal of existing traffic signal equipment, the existing traffic signal system shall be kept operable until the new equipment has been installed, tested, and ready for activation.* During periods when the existing traffic signal is inoperable, the intersection shall be flagged in accordance with the requirements of the local jurisdiction. In cases where this occurs within 200 feet of a highway-rail grade crossing, SCRRA shall control the highway-rail grade crossing with flagging.

3.15.5 Left-Turning Movements

A traffic study shall be conducted to determine the need and length for left-turn pockets and protected left movements at existing signalized intersections that are preempted by trains which, under the original conditions, do not have left-turn pockets or protected left-turn signal indications (green arrows). All legs of the intersection should be evaluated to

© Copyright 2009, SCRRA. All Rights Reserved

determine the appropriateness of the left turn protection. In addition, the length of the left-turn lane should be evaluated for proper application according to traffic demands. The left-turn protection (green arrow) shall provide the following criterion during the preemption sequence:

- Provide sufficient green time for the left-turning motorists traveling away from the highway-rail grade crossing to clear any vehicles from the railroad tracks.
- Restrict conflicting left-turn movements toward the tracks.
- Allow non-conflicting left-turn movements away from the tracks during the preemption hold interval.
- **In case there is an existing left-turn lane and it is not provided with a signal head equipped with protected left-turn arrow, the traffic signal shall be modified to provide protected left-turn arrow, or a blank-out sign.**

The lead Engineer shall analyze the length of left-turn lanes in association with the overall crossing. **A left-turn lane pocket configuration extending across the tracks is not allowed** unless countermeasures such as traffic signals, striping, and signing are also used to warn motorists not to stop on the tracks. A deviation from the Manual must be requested for this configuration. Several concerns arise with this configuration:

- Vehicles waiting to turn are impeded from turning by cross-traffic, since the turn onto the cross street is not controlled by a traffic signal
- Vehicles queuing in this left-turn lane over the track will not have an unimpeded egress should a train arrive.

In such cases, the design shall provide appropriate mitigations to avoid the trapping of vehicles across the highway-rail grade crossing.

- Install a preempted traffic signal at the cross street to allow the clearance of the left-turn lane on the arrival of a train
- Install a queue-cutter signal or pre-signal to control vehicles stopping on the tracks.

It must be noted that the addition of a left-turn lane, as well as changing the length of the left-turn lane, should only be considered after a proper engineering study regarding the traffic movements associated with that lane are known. The left-turn lane shall be of sufficient length to avoid vehicles waiting for the left turn to impede approaching traffic.

3.15.6 Pre-Signals

Refer to Part 8 of the CA MUTCD for requirements associated with pre-signals. Whereas existing traffic signal preemption is mandated to clear queued vehicles from the crossings upon arrival of trains, a pre-signal is intended to preclude, or minimize, and queuing across the highway-rail grade crossings during each traffic signal cycle, regardless of the presence of a train on the approach. A pre-signal does not eliminate the need for preemption, but it does significantly reduce the likelihood that vehicles are within the minimum track clearance distance, and clear storage distance, at the onset of the clear track green interval (see Section 3.15 for an explanation of these terms). See Figure 3-29 for a typical pre-signal.

© Copyright 2009, SCRRA. All Rights Reserved

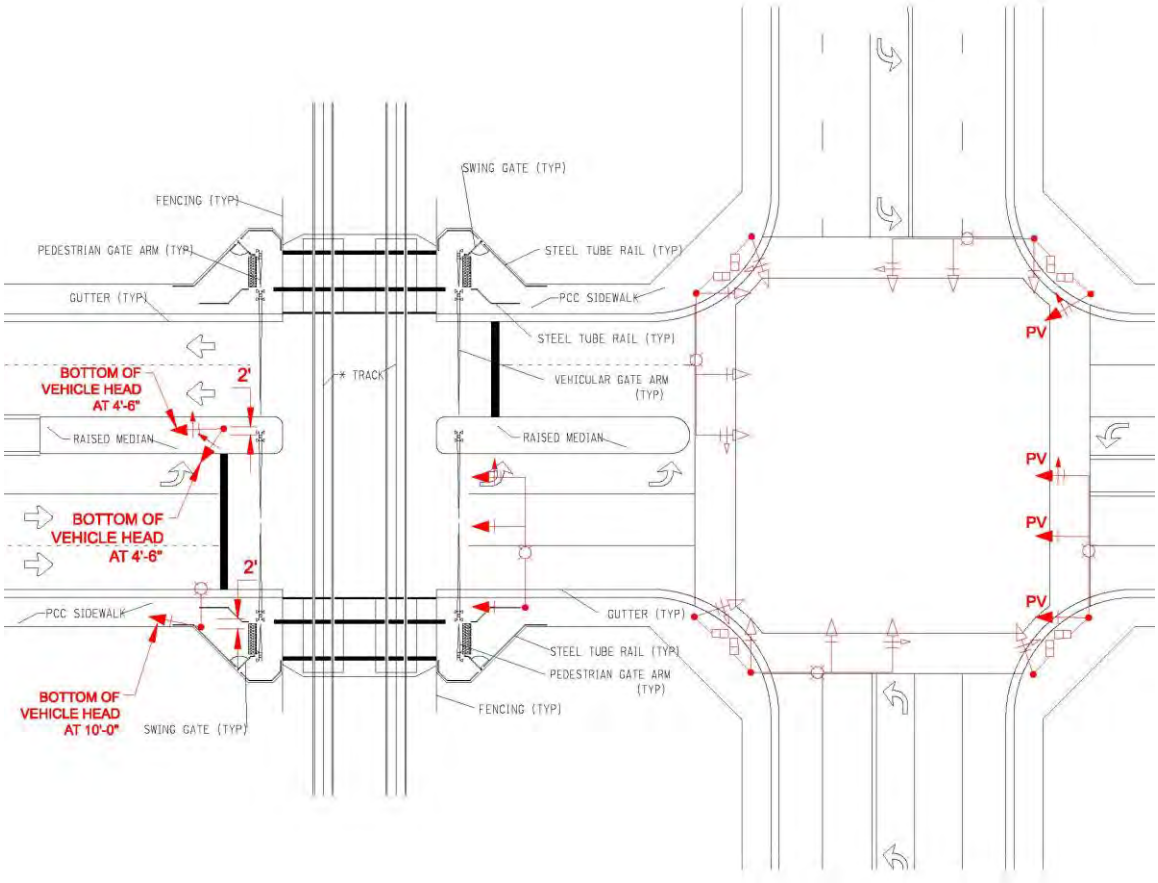

Figure 3-29. Typical Pre-Signal Layout

The lead Engineer should be aware that the installation of pre-signals, in coordination with railroad warning signals, can create instances where the motorist may become confused by conflicting signal directions. This can be a particular problem when the traffic signals on an overhead mast flash red as the railroad signal lights on a cantilever flash red. These send conflicting messages to the motorist: a flashing red traffic light indicates stop and proceed, while a flashing railroad warning light indicates stop. **The use of a Standard No. 9-A cantilever for a pre-signal is not allowed.** In locations where both a pre-signal and a cantilever are already present or are typically required, the lead Engineer should consider installation of the pre-signal and omit the installation of the Standard No 9-A device. This installation allows the railroad warning gates and lights to operate in conjunction with the traffic pre-signals to send the appropriate message to the motorist.

If the pre-signals are on separate masts, they must be positioned so as to avoid interference to the visibility of the railroad flashing-light signals or other traffic control signals.

A pre-signal should be considered in the following cases:

- Where the clear storage distance [measured between six (6) feet from the rail nearest the intersection to the intersection stop line, or the normal stopping point on the highway] is 50 feet or less.

© Copyright 2009, SCRRA. All Rights Reserved

- At approaches where high percentages of multi-unit vehicles are evident, the distance should be 75 feet. A vehicle classification study should be conducted to determine the types of vehicles using the crossing.
- Where the clear storage distance is greater than 50 feet or 75 feet (depending on the highway vehicle design length), but less than 120 feet, and an engineering study determines that the queue extends into the track area.

An engineering study should be made to evaluate the various elements involved in a pre-signal, addressing the following as a minimum:

- Site conditions of the highway-rail grade crossing and intersection, including minimum track clearance distance and clear storage distance.
- Traffic patterns, including queuing at the crossing.
- Type of vehicles that use the highway-rail grade crossing (to determine timing parameters).
- Highway-rail grade crossing and road intersection geometry, including grades, horizontal and vertical curves, and obstructions as well as the lateral and vertical angles of sight toward a signal face, to determine the vertical, longitudinal, and lateral position of the signal face.

Pre-signals can be used for stopping vehicular traffic before the highway-rail grade crossing where the clear storage distance is 200 feet or less. Pre-signals shall be considered when the clear storage distance is less than 120 feet. An engineering study shall confirm the correct application of pre-signals.

3.15.7 Pre-Signal Location

There are two primary alternative locations for placement of traffic signal heads at the crossing. Pre-signals on poles can be placed on the near side of the highway-rail grade crossing and on mast-arm poles placed ahead of the highway-rail grade crossing (upstream), or between the highway-rail grade crossing and the intersection (downstream). *Downstream placement is the preferred position, so the stopping position of the vehicular traffic is close to the crossing.* Where the pre-signal pole is mounted in advance of the highway-rail grade crossing with multiple approach lanes, a unit shall be placed on the sidewalk and on an inside median. **In all cases, pre-signal poles shall be positioned so as to maintain visibility of the railroad flashing lights.**

As per CA MUTCD (Section 4D-15 standard), a minimum of two signal faces shall be provided for the major movement on the approach to an intersection. At least one and preferably both of the signal faces shall be located as follows:

- Not less than 40 feet beyond the stop line, unless a supplemental nearside signal face is provided.
- Not more than 150 feet beyond the stop line, unless a supplemental nearside signal face is provided.
- As near as practical to the line of the driver's normal view, if mounted over the highway.

© Copyright 2009, SCRRA. All Rights Reserved

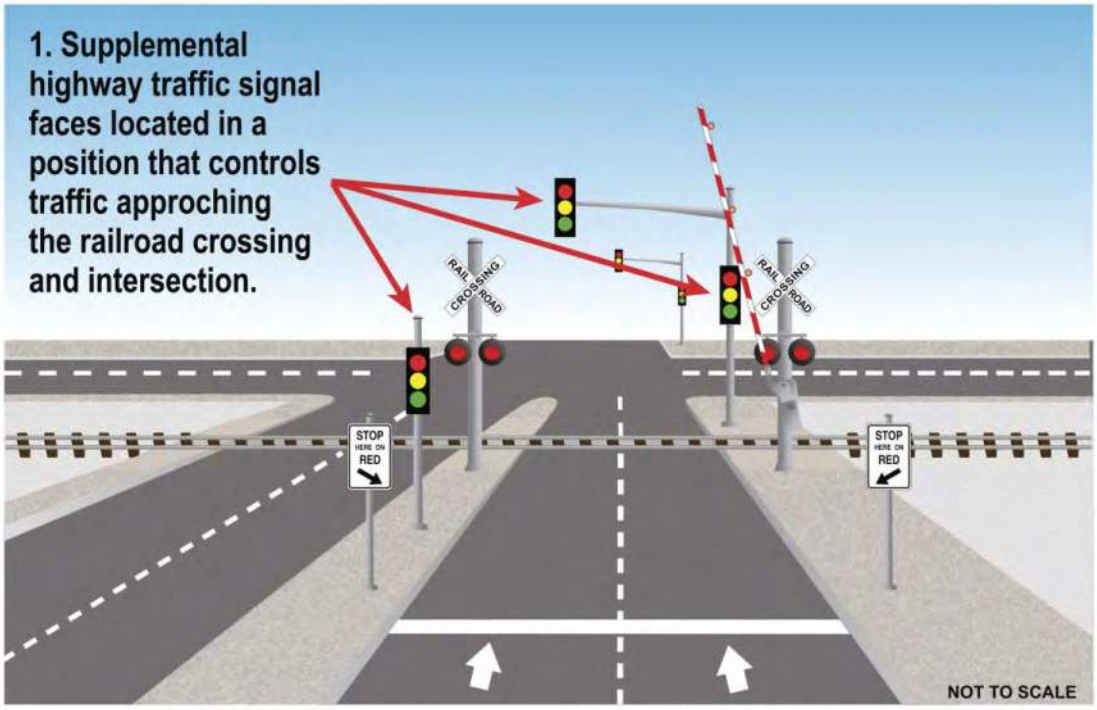

Figure 3-30. Pre-Signal Placement

3.15.8 Downstream Pre-Signals

Figure 3-30 shows a typical downstream installation, which includes a supplemental nearside signal face in the median. As specified in CA MUTCD, the stop line should be placed no closer than 15 feet from the nearest rail, and eight (8) feet from the railroad gates (if present). It is desirable to utilize this same stop line for the pre-signal indications, if possible. Placement of the traffic signal stop line at the same location as the railroad warning gate stop line has two advantages:

- Transit vehicles and trucks required to stop at crossings would not be subject to a double stop
- Heavy vehicles will be closer to the crossing, and therefore more able to clear the minimum track clearance distance during preemption

If clear storage distance is 50 feet or less, and if it is possible to use the nearside intersection signal heads as a pre-signal, the stop line of the pre-signal should be at the same location as the railroad warning gate stop line. **The farside intersection signal heads shall be equipped with programmed-visibility heads or louvers to restrict visibility of the intersection signal displays to drivers at the pre-signal stop line**.

If the clear storage distance is more than 50 feet, and if it is possible to locate a pre-signal between the highway-rail grade crossing and the intersection, the pre-signal faces should be located such that the stop line of the pre-signal is at the same location as the railroad warning gate stop line.

© Copyright 2009, SCRRA. All Rights Reserved

3.15.9 Upstream Pre-Signals

In order to meet CA MUTCD requirements, when traffic signal faces are located near the railroad warning devices, the stop line must be located a minimum of 40 feet ahead of (upstream) the signal faces. If the stop line distance is shortened, a low mount pre-signal head and a “STOP HERE ON RED” (R10-6) sign shall be installed to warn approaching traffic of the traffic control signal. The intersection signal heads should be equipped with programmed-visibility heads or louvers to restrict visibility of the intersection signal displays to the drivers at the pre-signal stop line.

3.15.10 Pre-Signal Operations

The pre-signal intervals should be progressively timed with the downstream intersection signal intervals, providing adequate time for vehicles to clear the minimum track clearance distance and continue through the clear storage distance area and downstream intersection. Vehicles that are required to make mandatory stops (such as school buses and vehicles hauling hazardous materials) should be considered when determining the preemption timing design parameters.

Unless otherwise defined, the design vehicle shall be for purpose of the Manual the AASHTO WB-65 semi-tractor-trailer.

Where the clear storage distance is inadequate to store the design vehicle clear of the minimum track clearance distance, consideration should be given to the installation of vehicle detection loops within the clear storage distance. This could prevent vehicles from being trapped within the minimum track clearance distance by extending the clear track green interval.

Pre-signals shall display a red signal indication during the transition into the preemption control portion of a signal preemption sequence. This shall prohibit additional vehicles from highway-rail grade crossing the railroad tracks.

3.15.11 Signs and Markings for Pre-Signals

Figure 3-31 shows typical placement of signs and markings for a pre-signal. If a pre-signal is installed at an interconnected highway-rail grade crossing near a signalized intersection, an R10-6 (“STOP HERE ON RED”) sign shall be installed at the stop line. If there is a nearby, signalized intersection with insufficient clear storage distance for a design vehicle, or if the highway-rail grade crossing does not have gates, an R10-11 (“NO TURN ON RED”) sign shall be installed for the approach that crosses the railroad track.

© Copyright 2009, SCRRA. All Rights Reserved

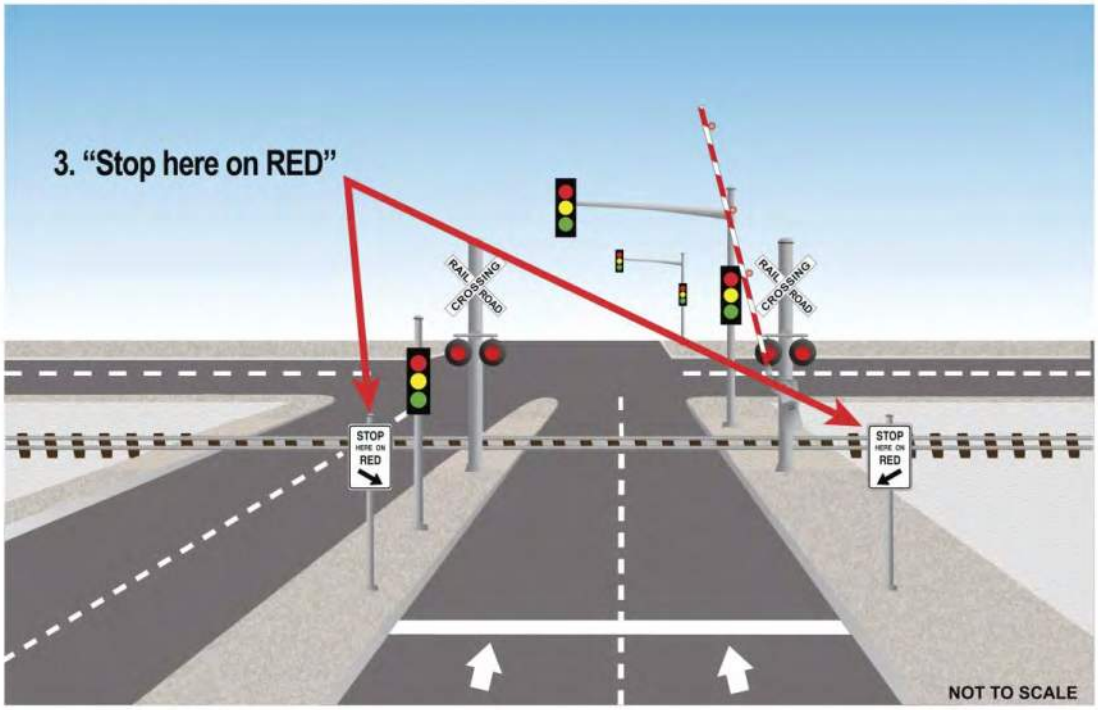

Figure 3-31. Pre-Signal Signs and Markings

3.15.12 Queue-Cutter Signals

Another solution to traffic queuing onto the tracks, and an alternative to a pre-signal, is the use of an automated queue-cutter traffic signal upstream of the highway-rail grade crossing. A queue-cutter signal differs from a pre-signal in that if the clear storage distance is greater than 200 feet; any traffic signal heads located at a highway-rail grade crossing should be considered to be a separate, mid-block highway-rail grade crossing(a "queue-cutter" signal), and not a pre-signal. The queue-cutter signal can be utilized in conjunction with R8-8 signs ("DO NOT STOP ON TRACKS"), as per CA MUTCD requirements. The queue-cutter traffic signal can be activated by vehicle detection (typically induction loops) on the departure side of the highway-rail grade crossing to detect a growing queue between the highway-rail grade crossing and the downstream highway intersection. Figure 3-32 indicates the use of a queue-cutter signal.

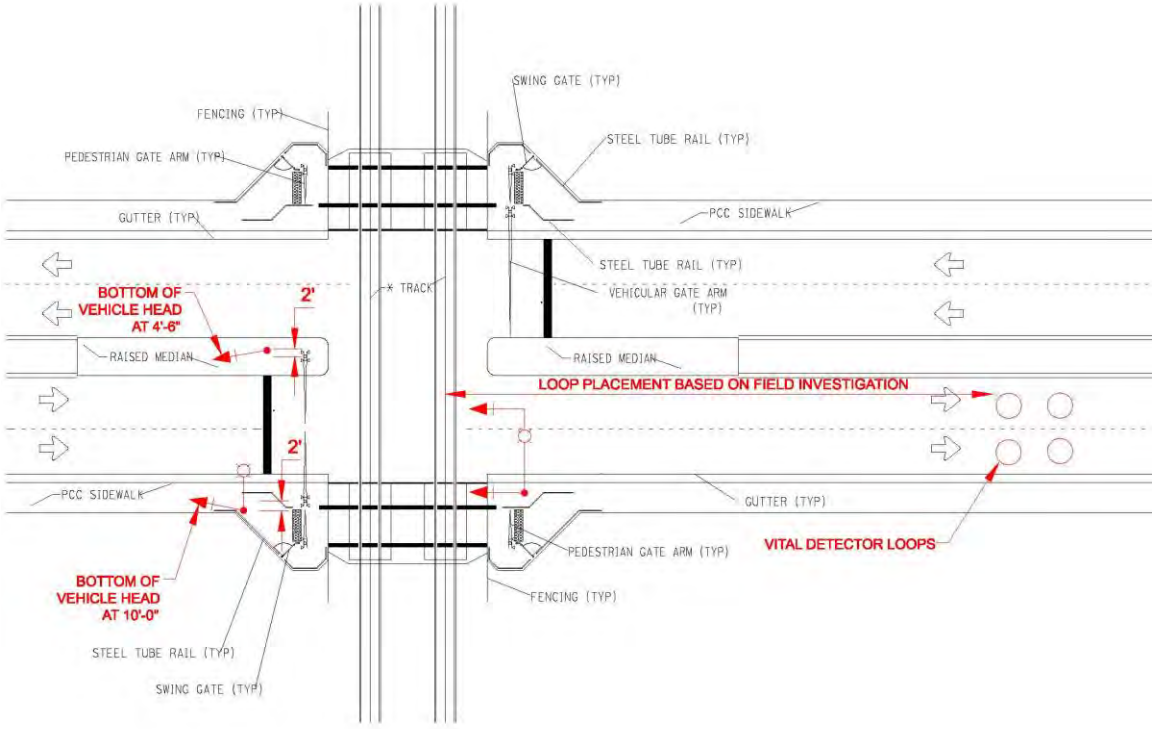

Figure 3-32. Queue-Cutter Signal Placement Layout

3.15.13 Traffic Signal Controller Units

There are two types of traffic signal controller units: those that are designed to NEMA specifications and those that are Type 170/2070 Controller Units (discussed below). Traffic signal controller units manufactured according to older NEMA TS 1 standards do not have internal preemption. These units are generally not capable of accommodating preemption without special external control processes. The current industry standard for both pretimed and actuated traffic signal controller units—the NEMA TS 2 standard—includes provisions for internal preemption.

The Model 2070 Controller Unit includes various provisions for internal preemption; these depend on the specific software packages being run by the microprocessor. The Model 2070 is an open platform advanced transportation controller (ATC) that completely separates hardware from application software by defining a common controller unit hardware on which multiple applications from multiple developers can operate.

The preemption capabilities of traffic signal controller units vary from manufacturer to manufacturer. It is very important to be familiar with the preemption operation provided in each controller unit being used in the field.

© Copyright 2009, SCRRA. All Rights Reserved

The IEEE 1570 standard for the interface between the railroad active warning system and the traffic signal controller unit is a digital communications interface. Designed according to both fail-safe and closed-loop principles, it provides equivalent functions while maintaining the required safety attributes at the highway-rail grade crossings. Application of the IEEE 1570 interface shall be explored for all new highway-rail construction and modifications. For more information on the IEEE 1570 standard, consult the IEEE Standard for the Interface Between the Rail Subsystem and the Highway Subsystem at a Highway Rail Intersection (IEEE publication no. 1570-2002).

The traffic signal controller unit shall be able to meet the following functions and requirements:

- Receive multiple preemption inputs and provide multiple routines on a priority basis, at least one of which shall be assigned to railroad preemption. Per CA MUTCD, the railroad preemption shall have priority at a traffic signal provided with emergency vehicle preemption and railroad preemption.
- The preemption feature shall have either an electrical circuit based upon the closed-circuit principle, or a supervised interconnect circuit (preferable) between the control circuits of the railroad active warning system and the traffic signal controller unit.
- Detect broken wires/cables and respond as programmed. One possible programming alternative is to first clear the tracks and then display all-way flashing red signal indications.
- Remotely notify the responsible highway agency as soon as a detectable problem is known to exist at the highway-rail grade crossing.
- Provide an indication, via health check circuit, to the railroad active warning system cabinet when the traffic signals are in flashing mode or “dark” condition for advance preemption.
- Provide a backup power system for the traffic signal controller in the event of a commercial power outage, and remote notification to the highway agency responsible for maintenance of the controller.

3.15.14 Standby Power

In accordance with FRA rules and requirements, railroads install backup power systems to provide power to flashing light signals during commercial power failures. This practice for back-up power is different from traffic signals that are generally dark when the commercial power is off. When traffic signals are dark, motorists in most jurisdictions are expected to know traffic signals are ahead; they are supposed to stop their vehicle at the stop line, and proceed with caution through the intersection as if the dark signal were a stop sign. Since dark traffic signals cannot provide preemption, **backup or standby power systems shall be required at all traffic signals interconnected with railroad signals.**

When traffic signals malfunction, which may cause an all-red flash, the advance preemption time becomes ineffective in helping clear vehicles from the crossing. As a result, vehicles may have less time to clear the crossing. The incorporation of a health check circuit can serve to convert some or all advance preemption time to warning time when this occurs.

© Copyright 2009, SCRRA. All Rights Reserved

3.16 PREEMPTION

The design of preemption for a highway-rail grade crossing owned or maintained by an agency other than the SCRRA shall be in accordance with the standards used by that agency. The resulting design must be consistent with, or more stringent than, the recommended design practices and standards in this Manual or other applicable SCRAA Standards.

In establishing preemption operations at highway-rail grade crossings adjacent to signalized highway intersections, the highway agency shall coordinate with the SCRRA and the CPUC. The need for preemption, type of preemption, preemption time, right-of-way transfer time, queue clearance time, clear track green interval, etc., for preemption shall be determined by the highway agency and must be agreed to by SCRRA.

3.16.1 Abbreviations and Formulas

The following abbreviations are provided to assist the lead Engineer in preparing the appropriate preemption timing parameters for the highway-rail grade crossing interface. These are also shown in Appendix B.

APT	Advance Preemption Time
BT	Buffer Time
CT	Clearance Time
CSD	Clear Storage Distance
ERT	Equipment Response Time
MHTSPT	Maximum Highway Traffic Signal Preemption Time (MPT)
MT	Minimum Time
MTCD	Minimum Track Clearance Distance
MWT	Minimum Warning Time
QCT	Queue Clearance Time
RWTT	Right-of-Way Transfer Time
ST	Separation Time
TAT	Total Approach Time
TWT	Total Warning Time

MHTSPT (MPT) = RWTT + QCT + ST or CT (whichever is greater)
TAT = MWT + BT + ERT + APT
TAT = TWT + ERT + APT
MWT = MT + CT
TWT = MWT + BT
APT = RWTT + QCT - MWT

RWTT = Minimum green interval, or pedestrian change/walk and pedestrian clearance time (whichever is higher) + yellow change + red clearance

3.16.2 Highway-Rail Grade Crossing Elements that Affect Preemption

The following highway-rail grade crossing and intersection elements affect preemption timing calculations and should be evaluated carefully to determine their impact:

© Copyright 2009, SCRRA. All Rights Reserved

- Intersection geometry.
- Highway-rail grade crossing geometry
    - Track clearance distance (track clear zone).
    - Clear storage distance; distance from clear track zone to intersection.
- Approaches to the highway-rail grade crossing during preemption calculations.
- Travel times to clear the intersection or crossing.
- Vehicle volumes.
- Frequency of train movements.
- Train stops within the approach to the highway-rail grade crossing (especially for sidings and stations).
- Vehicle queue lengths and dissipation rates.
- Design vehicles and special classes of vehicles, and their operating abilities through the intersection.
- Types of active warning devices.
- Pedestrian activity.

Intersection Geometry

No traffic movements toward the highway-rail grade crossing shall be allowed during preemption. Therefore, the lane configuration and traffic signal operation of the intersection must be evaluated to determine the need for additional lanes and traffic signal modifications to properly control the intersection movements. For example, if the highway parallel with the tracks has a shared through and left lane, and operates with a permissive green ball that allows left turns, the intersection would need to be reconfigured with a left-turn pocket with protected operation so the through movement can operate during preemption, while the left-turn movement toward the tracks is restricted. Alternatively, an R3-2 blankout sign can be installed to prohibit left turns. This must be evaluated first to help define what the advance preemption time needed to provide the appropriate transit from conflicting movements to the preempt sequence.

Minimum Track Clearance Distance

The minimum track clearance distance (MTCD) is measured along the highway from either the highway stop line; warning device; or 12 feet perpendicular to the track centerline; to six (6) feet beyond the furthest track, measured perpendicular to the far rail. The measurement is taken along the centerline or edge line of the highway, as appropriate, to obtain the longer distance. This measurement is used to determine the “clear track green interval”, and is also used to determine the “clearance time.”

Geometric features, such as elevation differences of the tracks or the skewed angle of the crossing, should also be considered when evaluating the effects the track clearance distance has on timing parameters.

Clear Storage Distance

Clear storage distance is the distance available for vehicle storage. It is measured between 6 feet from the rail nearest the intersection to the intersection stop line, or to the normal stopping point on the highway. At skewed crossings and intersections, the 6-foot distance shall be measured perpendicular to the nearest rail, either along the centerline

© Copyright 2009, SCRRA. All Rights Reserved

or along the edge line of the highway (as appropriate to obtain the shorter clear distance).

Jurisdictions shall often use this distance when calculating the "queue clearance time." Typically, the queue clearance time only includes the area between the MTCD and the intersection if there is not enough room to store a design vehicle. The lead Engineer must work with the local jurisdiction to determine the most appropriate method.

The operating abilities of the design vehicle must be considered when evaluating the queue clearance time; e.g., start-up for a heavy truck loaded down is much slower than for a normal vehicle. The movement the truck makes at the intersection also determines the time required to clear the vehicle.

3.16.3 Railroad Parameters for Preemption

Minimum Time

As per CA MUTCD requirements (Part 8 of Section 8D.06), the minimum time (MT) flashing-light signals shall operate is 20 seconds before the arrival of any train. The exception to this requirement is on tracks where all trains operate at less than 20 mph, and where flagging is performed by an employee. The FRA regulations in Title 49, Code of Federal Regulations (CFR), Part 234.225, state that a highway-rail grade crossing warning system shall be maintained so as to activate in accordance with the design of the warning system, but in no event shall it provide less than 20 seconds of warning time before the highway-rail grade crossing is occupied by train traffic. CPUC General Order No. 75 states that highway-rail grade crossing signals at main or branch line crossings shall be actuated by trains approaching on main tracks through track circuits or by electronic controls for approximately 25 seconds, with limits of 20 to 30 seconds in advance of the fastest train that is normally operated over the highway-rail grade crossing being protected.

Clearance Time

Additional time clearance time (CT) is often provided in excess of the minimum time to account for track clearance distances (track clear zone) that are wider because of a skewed highway-rail grade crossing or because of other specific features (i.e., one track being considerably higher than the other tracks, causing vehicles to slow down in the crossing). Clearance time should also consider the large number of slow vehicles that utilize the crossing; vehicles that take more time to cross than a normal vehicle.

Clearance time is added to the minimum time at a rate of one (1) second for each 10 feet (or fraction thereof) of minimum track clearance distance exceeding 35 feet.

Minimum Warning Time

CA MUTCD mandated minimum time of 20 seconds, and any additional clearance time is known as the "minimum warning time." This is the time between when the railroad warning system is activated and when the train enters the crossing. Refer to SCRRA Signal Standards for SCRRA's standard for MWT.

$$MWT = MT + CT$$

© Copyright 2009, SCRRA. All Rights Reserved

Equipment Response Time

Equipment response time (ERT) is the additional time provided to account for delays in railroad circuitry before the railroad warning devices are activated. This is typically set at 5 seconds, and is used to establish the approach time for train detection placement.

Buffer Time

Buffer time (BT) is discretionary time determined by the railroad. It is added to the required minimum 20-second time. The railroads add this buffer time for train handling to ensure that a required minimum warning time for track clearance is provided. Refer to SCRRA Signal Standards for SCRRA's standard for BT.

Total Warning Time

The total warning time (TWT) is a combination of each element defined above. Although the equipment response time is never reflected in the total warning time calculation, it should be figured into the approach time and distance for train detection.

$$TWT = MWT + BT$$

3.16.4 Preemption Operational Sequence

FHWA and ITE publications (see Appendix C for references) have tables and charts that help identify different paths that preemption can take during phased operation. These tables and charts indicate the displays that would be shown, depending on what phase was active when preemption input was received. Each highway-rail grade crossing is unique; an engineering study should be conducted for each signalized, intersection near a highway-rail grade crossing to determine the most appropriate preempt operational sequence and the preemption parameters to be implemented.

The traffic signal controller unit shall enter into preemption operation as soon as the interconnect circuit from the railroad active warning system is activated. Some controller units may incorporate a delay time to verify the continuity of the preemption call.

Railroad preemption results in a special traffic signal operation, depending on the relationship of the railroad tracks to the intersection, the number of phases in the traffic signal, and site-specific traffic conditions. Preemption ensures that the actions of the traffic control devices complement, rather than conflict, with the railroad warning system devices. There are three basic elements to railroad preemption:

1. Right-of-way transfer into preempt control
    a. Termination of normal operation
2. Preempt control
    a. Track clear/clear storage interval
    b. Hold/dwell interval
3. Transition to normal operation
    a. Exit phases
    b. Transition to coordination

© Copyright 2009, SCRRA. All Rights Reserved

Right-of-Way Transfer into Preemption Control

There are many possible transition scenarios, depending upon which interval in the traffic signal control cycle is operational when preempt is initiated. Upon receiving a preempt call, right-of-way transfer of the traffic signal should provide the following basic sequence of operation:

- The length of yellow change and red clearance intervals shall not be altered by preemption for any signal phase that is green or yellow when preemption is initiated.
- Phases that are in the green interval when preemption is initiated, and which shall be green during the track clearance interval, shall remain green, unless doing so creates a left-turn trap. In that case, they must be terminated normally and then restarted after a brief all-red period.

There are two basic scenarios that could occur with the pedestrian walk interval or the pedestrian clearance time, depending on the local jurisdiction's requirements:

- Immediate termination of the pedestrian walk or clearance intervals, with all pedestrian signals faces displaying a steady upraised hand during the track clearance green interval.
- Shortening of the pedestrian walk interval, while allowing the pedestrian clearance interval to follow the normal time.

The signal phase (or phases) controlling traffic, as it approaches the intersection after crossing over the railroad tracks, should be green during the track clearance interval. A yellow change interval shall be provided if a green signal indication was provided during the track clearance interval.

In cases where the approach has a phase that conflicts with the clear track green interval (queue clearance), the right-of-way transfer time (RWTT) shall be maximized when the preempt call is received at the traffic signal controller just after the onset of green. The maximum traffic signal timing required for the transition can vary, depending on the programmed phasing of the controller when the preempt call is established. The maximum RWTT used in the calculation of preemption time establishes the upper limit of the preemption time. This set of circumstances is sometimes referred to as "worst case" scenario.

The RWTT shall be nonexistent or zero if the preempt call is received when the traffic signal controller is already in the phase that is used as the clear track green interval (queue clearance phase). This scenario is usually known as the "best case" scenario. These variations in traffic signal operations can be unsafe if not properly recognized in the timing and design of simultaneous and advance preemptions. The "worst case" scenario shall be used in the determination of maximum preemption time, while both the "best case" and "worst case" scenarios shall be used in the design of any preemption sequence. A "gate-down" circuit should be used when there is a substantial difference between the minimum and maximum RWTT. Some traffic signal controllers are capable of dynamically calculating the maximum RWTT, adding extra time to the track clearance green when the actual RWTT is below maximum. The use of the "not to exceed" timing

© Copyright 2009, SCRRA. All Rights Reserved

circuit can also be used to control the advance preemption time; however, this type of circuit cannot prevent shorter advance preemption times.

Preemption Hold/Dwell

Limited Service shall be used for traffic signals interconnected to SCRRA active warning devices. The transition into preemption hold occurs after the queue clearance time and separation time (track clearance interval) have been completed, and continues while the train is occupying the crossing. Preemption hold shall remain in effect until the preemption input to the controller unit is removed. The purpose of the preemption hold interval is to allow those movements that do not conflict with the train to proceed through the intersection.

Depending on traffic requirements and the phasing of the traffic signal controller unit, the traffic signal may do the following:

Limited Service (standard)

- Revert to limited operation with those signal indications controlling through and left-turn movements toward the railroad tracks displaying steady red.
- Limited operation shall allow through and left-turn movements away from the railroad tracks to operate.
- With slow-moving trains and long interruption times, the preempt dwell may allow the traffic signal controller to rotate through various defined non-conflicting traffic phases.
- Permitted pedestrian signal phases shall operate normally.
- This operation shall be used only if the highway-rail grade crossing warning equipment includes gates.

Flashing All Red (only with SCRRA approval of standard deviation)

- Go into flashing operation, with flashing red or yellow indications for the approaches parallel to the railroad tracks, and flashing red indications for all other approaches.
- Pedestrian signals shall be extinguished.
- If flashing red is used for all approaches, an all-red or other clearance interval shall be provided prior to returning to normal operation.
- Blank out signs shall be used to prohibit turn movements across the tracks.

Transition to Normal Operation

There are many possible scenarios for the transition from preempt to normal operation; they depend on the type of intersection control that was in effect at the time of preempt (e.g., running free, actuated [semi or full], recalls, coordinated, etc.). The user can define the exit phases that shall operate after the preempt call has been released. Most controllers shall run the normal split time for the exit phases, and then, depending on user-programmed parameters, the controller shall attempt to resynchronize with the defined offset. There are basically three types of resynchronization capabilities (dwell, short way, add only) that control the transition back to normal operation.

© Copyright 2009, SCRRA. All Rights Reserved

Some controller software has the capability to monitor the coordinated cycle during preemptions so that upon release of preempt, the transition to normal operation is right in step with the coordinated background cycle. The lead Engineer should be aware of the local jurisdiction's preferred operation.

3.16.5 Preemption Timing Parameters

The highway-rail grade crossing elements that affect railroad preemption (as defined in Section 3.16.2) help calculate the timing parameters defined in this section. The narrative below presents preemption timing parameters that should be evaluated carefully and calculated for each appropriate sequence of preemption operation.

- Maximum RWTT
- Minimum RWTT
- Queue clearance time
- Separation time
- Maximum highway traffic signal preemption time
- Advance preemption time
- Total approach time

Maximum RWTT

The maximum RWTT is the "worst case" scenario and consists of the following timing parameters:

- Minimum traffic signal green time or minimum pedestrian walk time, whichever is longest
- Pedestrian clearance time
- Yellow change interval
- All-red clearance interval for opposing traffic

Minimum Green Interval

Two components are necessary to establish the minimum green interval for transition phases:

- Vehicle timing requirements
- Pedestrian timing requirements

If pedestrian timings cannot be truncated, then the vehicle timing requirements must be compared to the pedestrian timing requirements; the greater of the two shall set the minimum green interval. The minimum green time is the shortest green time allowed for each phase. The vehicle timing requirements shall consider both directions of travel, and the time required to clear the intersection if there is not sufficient clear storage distance for the design vehicle. This is very important for simultaneous preempt, where a design vehicle approaching the highway-rail grade crossing from the intersection does not have sufficient storage between the intersection and the crossing. Additional time may be necessary to allow the vehicle to cross the intersection, the insufficient storage area, and the minimum track clear area.

© Copyright 2009, SCRRA. All Rights Reserved

Pedestrian Clearance Time

The pedestrian clearance time shall adhere to CA MUTCD, Part 4, which addresses the shortening or omission of pedestrian walk and clearance intervals. The application of permitted pedestrian control during the transition into preemption control requires the agreement of the highway agency. The walk interval, if provided, should be at least seven (7) seconds long so that pedestrians will have adequate opportunity to leave the curb or shoulder before the pedestrian clearance time begins. For pedestrians in the crosswalk who left the curb or shoulder during the WALK signal indication, and who are traveling at a normal speed of 4.0 feet per second, the pedestrian clearance time, if provided, should be sufficient to allow them to reach at least the edge of the lane, or a median of sufficient width that they can wait safely. Where older or disabled pedestrians routinely use the crosswalk, a walking speed less than 4.0 feet per second and as low as 2.8 feet per second may be used in determining the pedestrian clearance time.

The “worst case” pedestrian interval is not restricted to pedestrian phases that run concurrently with vehicle phases serving traffic parallel to the tracks (or the track clearance phase). The “worst case” pedestrian interval may be associated with the vehicle phase approaching the highway-rail grade crossing. All pedestrian intervals that are required to time out must be evaluated to determine the maximum right-of-way transfer time.

Minimum RWTT

The minimum RWTT is the “best case” scenario in which all movements away from the tracks are being served when the preempt call is received by the traffic signal controller. If the intersection phasing operates with a permissive left turn for the approach that opposes the movement away from the track, then both movements must be terminated and the clear track interval may be reestablished without serving any other movements. This would consist of the following timing parameters, in sequence:

- Minimum traffic signal green time
- Yellow change interval
- All-Red clearance interval
- Re-establish clear track green

Some traffic signal controllers have the functional capability to lengthen the track clear green interval based on preprogrammed, required maximum right-of-way transfer times. This shall prevent the track clear green interval from terminating before the railroad warning system has been activated.

Queue Clearance Time

The queue clearance time (QCT) of the preempt sequence must be displayed long enough to clear all vehicles that might be stopped within the limits of the highway-rail grade crossing (minimum track clearance distance). Design vehicle characteristics, geometry of the highway-rail grade crossing, and the clear storage distance affect the queue clearance interval.

© Copyright 2009, SCRRA. All Rights Reserved

There are two possible scenarios that determine the queue clearance interval:

- If there is significant clear storage distance for the design vehicle, the queue clearance time provided must be sufficient to clear the minimum track clearance distance, but it is not required to clear every vehicle from the clear storage area.
- Although it is recommended that the queue clearance time provide enough time to remove all vehicles from the clear storage area, this is a jurisdictionally defined parameter that depends greatly on how long the clear storage distance might be.

The green for the queue clearance time should be displayed until the gates block the path of approaching vehicles, especially if the clear storage distance is insufficient for the design vehicle. The preempt calculations shall ensure that the gates start to descend before the queue clearance green interval terminates. This operation can be achieved through the use of a "gate down" circuit. (Refer to Section 6.1.2 for more information on "gate down" circuits). The queue clearance time should account for the following:

- Minimum track clearance distance
- Clear storage distance
- Start-up time of first vehicle in the queue and subsequent vehicles within the clear storage distance, and the minimum track clearance distance to travel through the intersection

If the clear storage distance has sufficient space for the design vehicle, the queue clearance time need only be sufficient to allow the design vehicle to start up and travel from the highway-rail grade crossing stop line to a point clear of the minimum track clearance distance.

The Los Angeles Department of Transportation "(LADOT) Railroad Preemption Worksheet" should be used to calculate the duration of the queue clearance interval.

Clear Track Green Time

One factor that some highway agencies take into consideration is the design vehicle's ability to clear the railroad gate on the approaching side of the highway-rail grade crossing when given a green indication to proceed. The concern is with the height of the semi tractor-trailer. If the travel lane is close to the railroad gate, there is a good possibility that the gate will start to descend before the design vehicle (a large semi tractor-trailer) has moved far enough forward to prevent the railroad gate from getting trapped between the cab of the semi's tractor and its trailer, thereby snapping the gate from the mechanism. This is a leading cause of broken gates.

Therefore an evaluation/calculation should be conducted to determine if additional time must be added to the queue clearance time to prevent this from occurring. A term used for this calculation is "clear track green interval." The clear track green interval should account for the following:

- Everything defined in the queue clearance interval
- Distance from the vehicle to the railroad mechanism

© Copyright 2009, SCRRA. All Rights Reserved

- Time required for the design vehicle to start up at the highway-rail grade crossing stop line and move forward, such that the railroad gate will not get trapped between the cab of the semi tractor and the trailer

The time for the design vehicle to start up at the highway-rail grade crossing stop line and travel to a point clear of the minimum track clearance distance is known as the clear track green time (CTG).

The CTG should be compared to the queue clearance time, and the larger of the two should be used in the preemption calculations. The "LADOT Railroad Preemption Worksheet" shall be used to calculate the duration of the queue clearance time and the clear track green time.

Separation Time

Separation time (ST) is the time during which the minimum track clearance distance is clear of vehicle traffic prior to the arrival of the train. The separation time is important under the following conditions:

- High-speed trains are present
- The passing traffic includes a high percentage of trucks and buses

The separation time should be a defined value (typically four to eight seconds) that is based on an engineering evaluation of the highway-rail grade crossing. Variations in traffic signal operation may affect the actual separation time experienced at the crossing. The lead Engineer shall consider the separation time to be at its minimum when the right-of-way transfer time and the maximum highway traffic signal preemption time are the largest. The "worst case" (maximum right-of-way transfer time) and "best case" (minimum right-of-way transfer time) scenarios shall be explored in the determination of maximum highway-rail traffic signal preemption time and separation time.

Maximum Highway Traffic Signal Preemption Time

To provide sufficient queue clearance or clear track green time for a highway-rail grade crossing, the controlling traffic signal must be notified in advance of a train's arrival. The total time required for this function—the advance notification time—is called the maximum highway traffic signal preemption time (MHTSPT). The MHTSPT is the maximum RWTT plus the QCT and the ST.

MHTSPT = Max RWTT + QCT + ST

Advance Preemption Time

Advance preemption time (APT) is the time above and beyond the MWT that is required to provide sufficient RWTT, QCT, or CTG, and ST. The minimum warning time includes any CT that is necessary for the highway-rail grade crossing.

© Copyright 2009, SCRRA. All Rights Reserved

The formulas shall be used to determine how much time is needed for the traffic signal system to appropriately accommodate an arriving train, and how much time is needed for the rail equipment. These design procedures and the "LADOT Railroad Preemption Worksheet" shall be used to determine the preemption time.

APT = MHTSPT – MWT

Total Approach Time

The total approach time (TAT) is not necessary for calculation of the required preemption time, but it is very useful for the rail operator when determining where to place the detection equipment. The total approach time includes the total warning time, the advance preemption time, and the equipment response time. The total warning time includes the minimum warning time plus the buffer time.

TAT = TWT + APT + ERT
TWT = MWT + BT

3.16.6 Types of Preemptions

Simultaneous Preemption

Under simultaneous preemption, the railroad flashing lights start to flash at the same time the preempt notification is received by the traffic signal controller. Simultaneous preemption is easier to apply and minimizes the variables that might otherwise come into play between the railroad warning system and traffic signal system. However, simultaneous preemption provides limited total warning times and may result in excessive gate down time if additional warning times are included.

To discourage unsafe behavior by impatient motorists, the railroad flashing-light signals shall start to flash and the gate arm shall descend to its horizontal position in a minimal amount of time. The traffic signals shall complete the RWTT and queue clearance time while the railroad warning system is activated. Actual railroad warning times can vary depending on the variable times provided by railroads for each train movement and the phasing of the traffic signal controller when the preempt signal is established.

Advance Preemption

Under advance preemption, the traffic signal controller unit receives the preempt notification from the railroad warning equipment before the railroad warning system is activated. The difference between the MHTSPT and the minimum warning time is called the advance preemption time.

Advance preemption has the following benefits:

- Provides additional track clearance and separation time, which clears the intersection prior to lowering the gates
- Gives vehicles stopped under the gates time to start up and clear the gates before they descend
- Provides adequate queue clearance time

© Copyright 2009, SCRRA. All Rights Reserved

- Facilitates a smooth transition from conflicting movements to the track clearance phase

3.16.7 Preempt Trap and Potential Solutions

Preempt trap is the condition wherein the queue clearance or the clear track green interval ends before the railroad flashing-light signals start to flash and the gates start to descend. Vehicles will continue to cross the tracks until the railroad gates actually begin to descend. Some vehicles will even try to squeeze under the descending gate. Therefore, the downstream traffic signals must display a queue clearance green indication until the gates have descended. The condition is exacerbated if the traffic signal controller that is used does not have the ability to expand the queue clearance interval time based on the green time already allocated to the conflicting movement. To properly define the preemption parameters, the lead Engineer must thoroughly understand the capabilities of the traffic signal controller that is to be used.

The following factors can also create a preempt trap:

- Any warning time variation that is different from the value used in the initial preemption calculation and programming of the traffic signal controller (if it is implemented without adjustments to the other preempt parameters).
- A longer advance preemption time that is different from the value used in the initial preemption calculation and programming of the traffic signal controller (if implemented without adjustments to the traffic signal controller parameters).

These variations in time create a preempt trap.

Under simultaneous preemption, the railroad warning lights start to flash at the same time the preempt notification is received by the traffic signal controller. Therefore, the queue clearance green interval cannot end before the lights start to flash.

The main cause of the preempt trap is the “uncoupling” of the preempt notification from the warning light activation in the preempt calculations. This results in two separate processes, with no fixed time relationship between them.

The evaluation of the maximum highway traffic signal preemption time should evaluate all possible approaches to determine the maximum right-of-way transfer time. Potential solutions for the preempt trap shall be considered and implemented. The following are some of the methods that may be used to avoid preempt traps:

- Increase the queue clearance green interval in the traffic signal controller unit. The queue clearance green interval should be displayed at least until the gates start to descend, and ideally until the gates block the path of approaching vehicles. The use of older traffic signal controllers cannot guarantee that the gates will be down when the queue clearance green interval terminates. Increasing the clear track green interval may not be the best option, because an increased overall delay to the signalized intersection can cause other congestion-related problems, especially if train volumes are high.

© Copyright 2009, SCRRA. All Rights Reserved

- Use a controller that is capable of dynamically calculating the RWTT and adding the difference to the QCT to account for the variations in allocated (versus used) green time for the conflicting movements.
- Use a "gate down" circuit to guarantee that the queue clearance phase terminates only after the gates are down. This is the preferred method. Refer to Section 6.1.2 for more information on "gate down" circuits.
- Use the "not to exceed" timing circuit. A not-to-exceed timer may be able to control the maximum advance preemption time, but it will not be able to prevent shorter advance preemption times.
- Use the preempt delay function in the traffic signal controller unit to adjust the actual implementation of the preempt sequence so it more closely coincides with the railroad gate's descent.
- The highway agency should consider changing its traffic signal controller unit specifications, selecting a unit that has the ability to adjust the queue clearance green interval based on variations in the time allocated versus the green time used for the conflicting movements.
- The traffic signal controller should also have the functional ability to recognize a second preempt call during the initial preempt sequence, and either maintain the preempt hold state or reserve the queue clearance interval before the railroad gates begin to descend for the second train.
- Consider the potential of conditional service solutions to prevent the preempt trap. Conditional service allows a signal phase to be served twice during the same cycle.

3.16.8 Preemption Timing Scenarios

The highway agency shall complete the "LADOT Railroad Preemption Worksheet" for both "worst case" and "best case" scenarios (see Section 3.16.4) for simultaneous and advance preemption scenarios, and submit it for SCRRA review. The evaluation shall consider all feasible approaches to the highway-rail grade crossing.

3.16.9 Other Preemption Considerations

Multiple Tracks

Multiple tracks at highway-rail intersections introduce two problems that must be considered when designing a preemption timing plan:

- Additional clearance distance is required during the queue clearance interval. The additional clearance distance increases the clear track green interval and thus increases the total approach time required for preemption.
- The possibility that a second preemption call could be sent to the controller unit immediately after the first preemption input is removed. This occurs when a train traveling on the second track approaches a crossing right after a train on the first track has left the highway-rail grade crossing area.

Older traffic signal controllers units could not recognize a second preempt call that was received while the first preempt was being serviced; the first preempt sequence had to time out first. Typically, the older traffic signal control units would then continue in the hold state even though the railroad gates had risen. If the railroad gates were to rise

© Copyright 2009, SCRRA. All Rights Reserved

before the control unit recognized the second preempt call, it could lead to skipping the clear track interval and potentially trapping vehicles on the tracks.

Provisions to avoid this problem may include use of an "extended hold" to keep the highway-rail grade crossing gates down until the second train has arrived, as well as use of traffic signal control logic that ensures that a second track clearance can be provided in the event the gates have been raised prior to the arrival of a second train.

When pedestrian clearance time becomes a driving factor for long preemption times and affects levels of service at an intersection, consideration should be given to providing a separate pedestrian input to the traffic signal controller. This is particularly true when there is a station stop in the approach to the highway-rail grade crossing.

The determination whether or not to use the vehicle gate interaction time shall be determined jointly by the railroad and agency. Among the factors to be considered are whether the highway-rail grade crossing has a history of broken gates and the impact on the additional preemption to the level of service.

Multiple Intersections

Where a highway-rail grade highway-rail grade crossing is located between two closely spaced signalized intersections, the two highway traffic signals must be interconnected. Further, their preemptions must be coordinated to permit the tracks to be cleared in both directions.

When the railroad diagonally crosses two interconnected highway intersections, it is normally necessary to clear out traffic on both highways prior to the arrival of the train, requiring approximately twice the preemption time computed for a single approach. It is also normally required to have both railroad warning systems designed to operate concurrently to prevent the traffic signals and railroad warning systems from falling out of coordination with each other. When the railroad warning system is activated, traffic leaving the intersection and approaching either highway-rail grade crossing may queue back into the intersection and block traffic if there is not adequate storage for those vehicles between the highway-rail grade crossing and the intersection. Traffic turning at the intersection toward the other highway-rail grade crossing may also be unable to proceed due to stopped traffic. When this occurs, the following recommended solutions could be used:

- Utilization of advance preemption
- Activating one highway-rail grade crossing before the other
- Extension of gate delay time and minimum warning time
- Use of blank-out turn restriction signs

3.16.10 Preemption Form with Gate Interaction

It is SCRRA's policy for traffic engineers to use the "LADOT Railroad Preemption Worksheet" spreadsheet to determine the amount of advance preemption and green track clearance time needed at preempted traffic signals near highway-rail grade crossings. This form is included in Appendix E, while an electronic version is available to the lead Engineer from SCRRA upon request.

© Copyright 2009, SCRRA. All Rights Reserved

This tool also provides a graphical depiction of the timeline of events occurring prior to train arrival at the highway-rail grade crossing to help the user visualize the effects of changes in preemption timing. It was designed to simplify the process of determining specific preemption timing values, and to enable the user to experiment with different scenarios based upon engineering judgment. The form computes the necessary times based upon input data regarding specific geometric, signal timing, and railroad equipment parameters. As data is entered into the form, a timeline is updated to show the effect of each entry. Once all the entries are completed, the timelines can be reviewed to determine whether the settings are appropriate for the crossing. This gives the user the ability to experiment with different timings and immediately see the result of those changes.

3.17 RAILROAD FEATURES

Gate Operations Near Stations

Most stations function as both nearside and farside stations (relative to the highway-rail grade crossing and the travel direction of the trains). Figure 3-33 shows a station adjacent to a highway-rail grade crossing. A station functions as a nearside station when a passenger train stops at the station before proceeding through the highway-rail grade crossing. In cases where the station is within the highway-rail grade crossing detection circuitry, but not directly adjacent to the crossing, it is desirable to have the highway-rail grade crossing gates remain raised until the train is ready to depart (assuming there is sufficient distance between the highway-rail grade crossing and the station to allow this protocol). *When stations are very near vehicular crossings, it may be preferable to have the gates remain down while the train is waiting in the station to depart.* This is particularly important at a multiple-track station adjacent to a crossing, where the train stopped at the station may block the view of a second oncoming or overtaking train in the far track.

Figure 3-33. Stations near a Highway-Rail Grade Crossing

© Copyright 2009, SCRRA. All Rights Reserved

Stations function as farside stations when passenger trains proceed through the highway-rail grade crossing before stopping at the station. The highway-rail grade crossing gates should recover immediately after the train proceeds through the highway-rail grade crossing unless a second train is approaching on the opposite track (in the case of multiple-track stations only), in which case the gates shall react and remain down as required. The station scenarios described above are ideal; however, each situation is unique and should be carefully examined during the diagnostic analysis and design in order to address the challenges at the highway-rail grade crossing and station interface.

Track Structure

The track structure within the highway-rail grade crossing is defined from the subgrade up through the highway surface. All components of the track structure shall be in accordance with SCRRA Engineering Standards. The track structure shall be designed to: minimize maintenance; minimize opportunities for vehicles to become trapped on the tracks due to an uneven surface or failing pavement; and maximize the lifetime of the track structure.

Within the limits of the highway-rail grade crossing, the track structure works in concert with the highway structure to provide a smooth, safe, and efficient means for vehicles to cross the tracks. It is important for the lead Engineer to note that the track structure—designed for maintenance and sustainability—is a significantly stiffer structure than the highway structure on the approaches. With the addition of concrete crossing panels and asphalt overlays, the track modulus is significantly increased. The effects of this increase are mitigated within the structure to maintain an effective highway-rail grade crossing design.

In the design of the track structure, the lead Engineer shall pay close attention to the conditions existing at the highway-rail grade crossing to detect any indications of failure of the surface or structure. The track structure at highway-rail grade crossings shall follow SCRRA design standards and meet the following criteria:

- No exothermic rail welds, insulated joints, or bonds shall be placed in highway-rail grade crossings or within 10 feet of a crossing.
- No turnouts or crossovers shall be located within a crossing.
- The highway-rail grade crossing structure shall be designed to permit the maximum amount of drainage of the track structure. Therefore, it may be necessary to construct underdrains within the vicinity of the highway-rail grade crossing to maximize the highway-rail grade crossing life. Under no circumstances shall street surface or gutter runoff be permitted to flow into the track structure.

Multiple Tracks

Multiple, parallel tracks within the highway-rail grade crossing create additional concerns for the lead engineer. Specifically, the lead Engineer shall mitigate the following concerns during the design of the crossing:

© Copyright 2009, SCRRA. All Rights Reserved

- The curvature of the railroad tracks and the resulting superelevation of the tracks shall be evaluated and addressed within the design. Refer to Section 3.5 for additional details on geometry.
- The additional time necessary for a pedestrian to traverse the highway-rail grade crossing shall be minimized. This is especially important with skewed crossings.
- Visibility of the second track and the potential for trains approaching on that track shall be considered.
- Visibility of the second track, where a train may be temporarily stopped or spotted on the adjacent track, shall be considered. This is especially important when the second track is a siding or industrial lead where locomotive and railroad cars may be stored for long durations.

Geometry

Horizontal curves on mainline tracks are superelevated to account for vehicle dynamics. This superelevation is accomplished through maintaining the profile of the low rail (the inside rail) and lifting the outside rail to superelevate the track. Traditionally, the railroad profile shown in drawings and track charts refer to the low rail as the profile grade. The horizontal geometry will define the superelevation.

Where highway-rail grade crossings are located within a superelevated curve, the surface of the highway plane should be in the same plane as the top of rails of the superelevated curve.

This minimizes undulations in the highway surface that can cause a vehicle to become stranded on the tracks. Figure 3-34 is an example of superelevated curves within a highway-rail grade crossing that are not on an even plane.

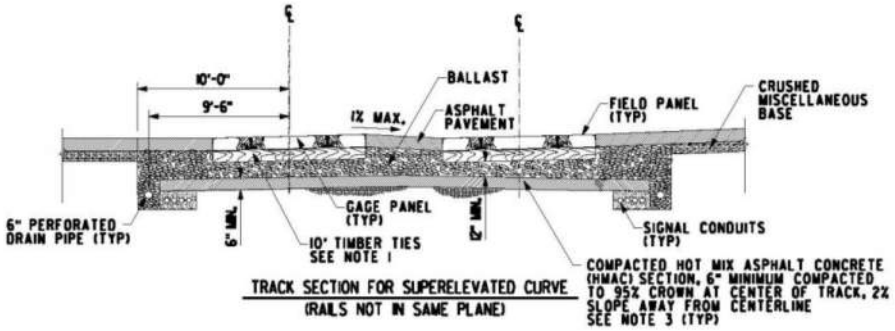

Figure 3-34 Uneven Highway Surface Created by Superelevation

At multiple-track crossings involving concentric superelevated curves, the inside rails for each track may be at equal elevations, while the outside rail are also at equal elevations. The elevations of the four individual rails create an uneven surface through the highway-rail grade crossing.

To avoid this situation, multiple tracks shall be brought to the same plane to provide a smooth and level highway-rail grade crossing plane for the highway (see Figure 3-35 for

© Copyright 2009, SCRRA. All Rights Reserved

an example). This may not be possible due to railroad vertical profile constraints; therefore, highway vertical profiles should be designed on either side of the highway-rail grade crossing to provide as smooth a transition as feasible, and to provide the proper clearance for the lowest vertical clearance design vehicle. Additional warning signs (such as W10-5) are required to alert motorists of a low-clearance situation.

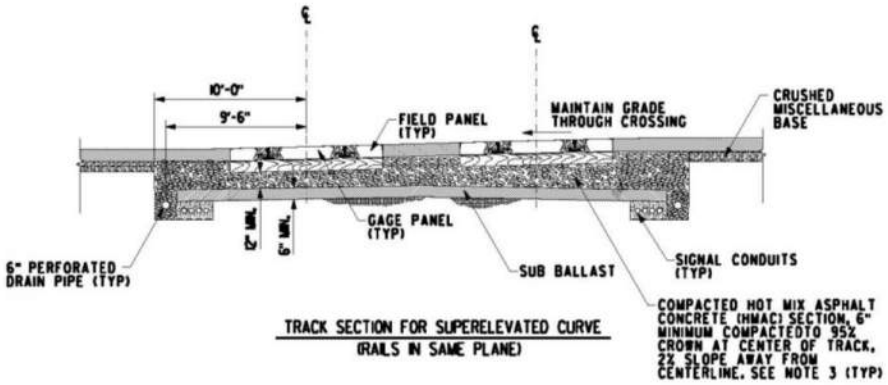

Figure 3-35. Superelevation with Rails in the Same Plane

Special Trackwork

Highway-rail grade crossings located in close proximity to special trackwork are discouraged. The main concerns about the proximity of special trackwork to a highway-rail grade crossing are as follows:

- Additional train movements with switching movements.
- Exothermic welds and insulated joints generally cannot be located within the limits of the grade crossing.
- Signal design concerns related to adjacent railroad signals associated with the special trackwork.
- Additional prolonged railroad activity within the highway-rail grade crossing limits related to industry lead service.

© Copyright 2009, SCRRA. All Rights Reserved

Figure 3-36. Location of Adjacent Turnouts and Crossovers

The point of switch for turnouts and crossovers should be located a minimum of 60 feet outside of the limits of the crossing. Figure 3-36 shows such an application. When turnouts and crossovers are close to the highway-rail grade crossing, the lead Engineer shall consult SCRRA about the railroad's need for special trackwork. The lead Engineer shall refer to SCRRA communications and signal Engineering Standards.

Utilities

The term "utilities" includes electric power, cable TV, and lines for: telephone, water, sewer, gas, communications, street lighting, traffic signals, waste water, fuel, and oil.

Railroad right-of-way typically contains a wide variety of utilities that are related to the operations of the railroad and other public or private uses. The design shall address the location of each affected utility and mitigate the impacts on these utilities. The lead Engineer shall obtain the necessary right-of-way information regarding the license/easement agreements related to the utility, and address any modifications that may be required. This includes potential limitations on access as a result of the construction of the crossing, the preservation of access for the utility for maintenance purposes, and safety impacts of the highway-rail grade crossing related to the utility.

After the acceptance of plans by SCRRA and other stakeholders, the lead Engineer shall submit and obtain written approval of design from all utilities within the construction area. This includes all utilities that have established prior use of the right-of-way under easement or license agreements.

© Copyright 2009, SCRRA. All Rights Reserved

For a new highway-rail grade crossing, existing underground and aboveground utilities shall be identified prior to any construction. The appropriate regional notification center [Underground Service Alert (DIGALERT) at (800) 227-2600], railway companies, and utility companies shall be notified prior to performing any excavation close to any underground pipeline, conduit, duct, wire, or other structure. Refer to SCRRA's website http://www.metrolinktrains.com to ensure proper contract information and phone numbers. SCRRA is not a member of DIGALERT. It is, therefore necessary to call SCRRA's signal department phone number (refer to SCRRA's website) to mark, at the highway agency's or contractor's expense, signal and communication cables and conduits. In case of signal emergencies or highway-rail grade crossing problems, the contractor shall call SCRRA's 24-hour signal emergency number. When the new crossings involve gates, the minimum required clearance from existing overhead wires (as specified in CPUC GO-95) shall be maintained, and gate foundations checked for utilities.

The lead Engineer shall locate and note all utilities in place at the crossing. These utilities shall be confirmed by potholing or other method to determine location and depth. This is especially important where additional highway-rail grade crossing devices are to be installed or existing devices relocated. The lead Engineer shall address the location of any utilities in relation to any device foundations or other structural considerations.

The installation of conduits or encasements under the railroad shall be in accordance with SCRRA Engineering Standards for utility crossings. In addition, the lead Engineer shall comply with the SCRRA standards for details on jacking pipes or conduits under SCRRA tracks.

Signs and Billboards

Advertising billboards are often located along the open spaces of the railroad right-of-way. These are to be treated as individual right-of-way items that shall be addressed early in the design phase. The lease agreements between the two parties often create special and time-consuming circumstances that must be addressed early to avoid delays if the billboards or signs must be relocated. The removal or relocation of a billboard shall be coordinated with the right-of-way departments of SCRRA member agencies.

Billboards and sign structures can create visibility problems and distract the motor vehicle operator's attention from the warning devices locate near or at the highway-rail grade crossing. Figure 3-37 illustrates how billboards and signs can block the view of a crossing.

In many cases these billboards are mounted on substantial columns, impeding the view down the railroad right-of-way. Signage placed within or adjacent to the right-of-way for traffic control or other purposes must also be addressed during design. When developing the overall design of the crossing, the lead Engineer shall consider the current locations of existing signs and billboards, and the ultimate effect that this placement will have on the operation of the crossing. Signs that could impede visibility should be noted during the diagnostic review and, if necessary, recommendations should be made regarding the treatment of these signs.

© Copyright 2009, SCRRA. All Rights Reserved

Figure 3-37. Billboard within the Right-of-Way

Enhancements to highway-rail grade crossings that involve improved pedestrian access, additional warning devices, widened highways, and additional traffic signal equipment may be affected by billboards located adjacent to the crossing. It may be necessary to remove or relocate the billboard prior to construction.

3.18 FUTURE IMPROVEMENTS

Enhancements to the highway-rail grade crossings, such as median islands, traffic signal system, preemption, widening, pedestrian and vehicular facilities, should be designed and constructed, such that future railroad improvements [second or more track(s)] and/or other railroad improvements can be accommodated without the need to completely modify the current elements of the crossing. *The lead Engineer or designer should be cognizant of the potential to improve the highway-rail grade crossing system for future SCRRA tracks and other facilities, and should incorporate into the design the necessary accommodation of future railroad improvements.*

© Copyright 2009, SCRRA. All Rights Reserved

4.0 PEDESTRAIN-RAIL GRADE CROSSINGS

4.1 GENERAL

Pedestrian treatments shall be installed at pedestrian-rail grade crossings in accordance with the Pedestrian-Rail Grade Crossing Design Consideration Flowchart in Figure 4-2. Pedestrians at highway-rail grade crossings present unique challenges to the lead engineer. Many of the same considerations given to motor vehicles-such as channelization, signs, and warning lights-also apply to pedestrians. This section of the Manual will discuss and define the components and treatments that together, all or in part, comprise a pedestrian-rail grade crossing and then will describe the applications at the different types of pedestrian-rail grade crossings. Pedestrian-rail grade crossings can be placed in four different categories:

- Pedestrian-rail grade crossings adjacent to a motor vehicle crossing
- Pedestrian-rail grade crossings at stations adjacent to motor vehicle crossings
- Pedestrian-rail grade crossings at stations
- Pedestrian-rail only crossings

Each of these types of pedestrian-rail grade crossings generates unique challenges that need to be addressed during the design phase. In general, pedestrian-rail grade crossing design should facilitate efficient and safe travel across the railroad right-of-way, and shall be in accordance with SCRRA's Engineering Standards. It is desirable that the pedestrian-rail grade crossing have the following features:

- A smooth, easily traversed surface that does not impede individuals with disabilities, strollers, or carts, incorporated into the adjacent sidewalk topography.
- Clear striping and signage that avoids confusing directions or features, a relatively straight path that is clearly marked and easily accessible throughout the footprint of the crossing and a readily accessible means of exiting the crossing.
- Deterrents such as fending and gates that minimize trespassing into prohibited areas of the railroad right-of-way.

4.2 PEDESTRIAN-RAIL GRADE CROSSINGS AND GRADE SEPARATIONS (AT STATIONS)

Pedestrian-rail grade crossings at stations shall be evaluated for grade separation per the following criterion, along with an analysis of the train volumes and pedestrian volumes. The lead Engineer will work and coordinate with SCRRA for the determination of the need for grade separation:

- One main track plus a platform — Pedestrian–rail grade crossing acceptable
- Two main tracks plus two platforms — Pedestrian-rail crossing acceptable consider Pedestrian grade separation > 50 daily trains
- Three or more main tracks — Grade separation recommended

4.3 TEN-MINUTE WALK RULE

In order to determine if a crossing has, or has the potential for, pedestrian activity, pedestrian-rail grade crossings shall be evaluated using the 10-minute walk rule. This

© Copyright 2009, SCRRA. All Rights Reserved

rule is based upon research conclusions that pedestrians will walk ten minutes to reach their destination. This equates to a one-third to one-half mile walk. Therefore, if the crossing is located within this radius of schools, hospitals, substantial pedestrian generators or other facilities, then the lead Engineer should consider features pedestrian traffic features over the crossing.

4.4 PEDESTRIAN AND TRACK STRUCTURE INTERFACE

The track structure is made up of many components. The component that most affects the pedestrian-rail grade crossing is the flangeway. The flangeway is the inside edge of the rail and the crossing surface and allows the flange of the train wheel to ride along the rail.

The ADA limits the width of the flangeway gap to a maximum of two and a half (2½) inches (ADAAG 10.3.1). The surface of the crossing shall be level and flush with the top of the rail at the outer edge and between the rails. Freight railroads require a three (3) inch flangeway gap at installation. This allows for a wear of about one (1) inch in regular use. SCRRA standards call for a rubber flangeway filler for all new or improved crossings that accommodates the ADA requirement while allowing the free movement of rolling stock over the crossing.

4.4.1 Visibility

Visibility between trains and pedestrians shall be considered during the diagnostic analysis and design of the crossing. The design should provide the pedestrian reasonable visibility of a train upon its approach and departure. This is important when dealing with a multi-track crossing, when the view of an approaching train may be blocked by an additional train. In general, the installation of active warning devices including automatic gates and appropriate fencing will mitigate for the lack of visibility. During the initial site assessment, the lead Engineer shall examine all features in and around the crossing that could impede pedestrian visibility.

Many features present at a highway-rail grade crossing can hinder visibility for the pedestrian. These features may include the following:

- Buildings and/or walls
- Billboards, signs, and utilities
- Trees and other vegetation
- Traffic patterns of motor vehicles at the crossing
- An adjacent bus stop shelter and bus operations associated with that shelter
- Trains stopped at multiple-track crossings
- Adjacent developments such as housing units, buildings, and industrial parks
- Railroad features such as shelters

The lead Engineer shall consider the overall visibility at the crossing from the pedestrian's perspective, and endeavor to mitigate deficiencies that could diminish the intrinsic safety of the crossing. During the diagnostic analysis and inventory, the diagnostic team shall consider the following and take appropriate action:

© Copyright 2009, SCRRA. All Rights Reserved

- Diagram the crossing to show the obstructions to pedestrian visibility, and incorporate solutions into the design of the crossing.
- Examine each of the features at the crossing, and thoroughly explore the risk arising from those features, and may include recommendations to remove a feature that is severely impeding pedestrian visibility.
- Additional devices or signage may be necessary to offset the lack of visibility created by the obstructions; however, placement of each of these devices should be carefully examined for compatibility with existing features.

4.5 AMERICANS WITH DISABILITIES ACT

The Americans with Disabilities Act Guidelines (ADAAG) govern the design and construction of any features associated with pedestrian crossings. **ADA guidelines must be incorporated into the overall design for pedestrian-rail grade crossings.**

Detectable warning strips shall be applied to the sidewalk ahead of the warning device in order to show pedestrians where to stop when a train is approaching.

The placement of the detectable warning strip shall follow the standards outlined in SCRRA's Engineering Standards.

4.6 WARNING DEVICES

Pedestrian-rail grade crossing active warning devices shall be installed 15 feet from the centerline of the track, as measured from the center of the mast at new or existing crossings. A design deviation may be requested for active warning devices installed less than 15 feet, but in no case shall an active warning device be installed less than 12 feet from the centerline of track.

4.7 CHANNELIZATION

The design of pedestrian-rail grade crossings shall provide clear, well-defined travelways throughout the crossing and should discourage improper pedestrian behavior, such as circumventing the gates, walking onto the railroad right-of-way, or walking onto the highway. Fencing or railing should be provided along the sidewalk to direct pedestrians along the proper path, but coordination with the SCRRA Signal Department is recommended to ensure this railing, to the extent possible, does not block or impede maintenance access to railroad signal devices, and does not interfere with the location of the devices used for sealing the corridor. This can be tubular steel railing, ornamental fencing, or welded wire mesh fencing. The type of fencing to be used shall be discussed with the stakeholders.

Additional controls used to identify the pedestrian travelway include striping and raised markers. Bold, white striping, with reflectorized markers, is used to delineate the pedestrian's safest path across the crossing. Refer to SCRRA Engineering Standards for examples of these treatments.

The channelization of pedestrians is particularly effective when attention can be directed along a given line of sight. By controlling the direction taken by pedestrians approaching a crossing, the lead Engineer may be able to induce pedestrians to look in a given direction. For example, the creation of a zigzag pedestrian path forces the pedestrian to

© Copyright 2009, SCRRA. All Rights Reserved

look along both approaches of the crossing, maximizing the likelihood that the pedestrian will see trains approaching from either direction. Figure 4-1 illustrates this type of channelization on the approach to the pedestrian-rail grade crossing.

Pedestrians sometimes trespass into prohibited areas of the railroad right-of-way. This problem requires special consideration. Traditional designs have often used fencing to keep pedestrians out of protected areas. “No Trespassing” signs, complete with warnings about enforcement and prosecution, have also been used. During the diagnostic review, the team should review pedestrian access to the railroad right-of-way and develop safe and effective solutions to preventing unwanted trespassing.

Figure 4-1. Pedestrian Channelization

4.7.1 Center Fence (Inter-Track Fence)

At stations, track centers shall be a minimum of 18 feet but not more than 25 feet to accommodate a center track fence. Such fences must have a 9’-0” minimum (on tangent) clearance from each track center. The fence shall encompass the platform and channel the passengers to crossings at the end of the platforms. Where tracks cannot be widened to accommodate a center fence, proper signage should be installed to deter pedestrians from crossing the tracks except at the proper and designated locations.

4.7.2 Refuge Areas

SCRRA standards for pedestrian applications include an area where pedestrians crossing the track can seek refuge. SCRRA standard pedestrian channelization concepts include a refuge area where the pedestrian can wait as a train approaches. This refuge area is not intended as a location where a pedestrian can wait for the train, but rather as a safe harbor should the pedestrian hesitate between the down gates and the track. Refer to Engineering Standards for examples of these refuge areas. The

© Copyright 2009, SCRRA. All Rights Reserved

refuge area shall incorporate a swing gate (see Section 4.8.3 for additional information) to allow pedestrians to exit the refuge area away from the tracks.

4.8 PASSIVE DEVICES

4.8.1 Signage

Signage is utilized throughout a crossing to guide pedestrians safely through it. Of particular note are the signs warning pedestrians of multiple tracks, and the possibility of multiple trains at the crossing. These signs should be used at the approaches to the crossing. The potential presence of a second train is an important consideration when applying signage to the crossing.

4.8.2 Pavement Markings

Pavement markings should generally consist of white striping with reflectorized indicators. Refer to the Engineering Standards for details on pavement markings.

4.8.3 Swing Gates

Pedestrian swing gates have two distinct functions: they can serve as an entry/exit swing gate, or strictly as an emergency exit gate, as explained in further detail below:

- As an entry/exit swing gate, the swing gate is intended, when not used with a pedestrian-rail grade crossing gate, to slow pedestrians and encourage them to stop, look both ways down the track for approaching trains, and then pull the swing gate open to safely cross the tracks. A “LOOK” sign, as detailed in the Engineering Standards, shall be mounted on the approach side on the swing gate or on a separate post next to the swing gate. Particularly at pedestrian-only crossings without active warning devices and automatic gates, the pedestrian must determine if there is sufficient time to cross the tracks in front of an approaching train. The diagnostic team should provide the pedestrian with adequate visibility. Appropriate “Push Gate To Open” signs on the track side and “Pull Gate To Open” signs on the approach side shall be mounted on the entry/exit swing gates.
- As an emergency exit gate, the swing gate is incorporated with an active warning device, so pedestrians shall have an escape route in the event of occupying the crossing during the time when a crossing gate is activated. The gate shall only swing away from the crossing, with clearly marked “Push Gate To Open” signage on the track side. The approach side of the swing gate shall have signage marked as “Exit Only” to deter pedestrians from using the gates and entering the crossing while the active warning gates are activated.

Refer to SCRRA Engineering Standards for details on the swing gates and signs. The responsibility for the installation and maintenance of swing gates shall be covered in a C&M Agreement.

4.9 ACTIVE DEVICES

Active warning devices applicable for pedestrian-rail grade crossings are usually similar to those for vehicles. Active pedestrian warning devices include pedestrian gates. Refer

© Copyright 2009, SCRRA. All Rights Reserved

to Engineering Standards for pedestrian warning devices.

Active warning devices that are used to aid pedestrians take on a variety of configurations. Refer to Engineering Standards for examples of these configurations.

4.10 PEDESTRIAN-RAIL GRADE CROSSING TYPES

The design of a pedestrian-rail grade crossing should provide an environment that provides ample opportunities for pedestrians to observe and comply with the warning devices and stay clear of any approaching train traffic. The option to select passive and active warning devices depends upon the four types of crossing listed at the beginning of this section. With each type, the following factors need to be considered:

- The number of and type of tracks (i.e. main, siding, industry lead)
- The proximity to rail passenger stations
- The proximity to other rail facilities such as sidings, yards, industry spurs
- The skew and vertical profile across the crossing
- Visibility restrictions
- The volume and pattern of pedestrian activity
- Current and future development in and around the crossing
- Right-of-way constraints

4.10.1 Pedestrian-Rail Grade Crossings at Highway-Rail Grade Crossings

Most pedestrian-rail grade crossings on SCRRA's system are of the type where the pedestrian-rail grade crossing is a part of the highway-rail grade crossing and is located on one or both sides of the highway and the highway-rail grade crossing.

When beginning the design for modifications to a highway-rail grade crossing, the lead Engineer should determine whether or not the local highway agency allows pedestrians along the highway and to what degree pedestrian facilities are already in existence. A flowchart detailing the decision process for determining the type of pedestrian treatments warranted for a highway-rail grade crossing is provided in Section 4.11.

4.10.2 Pedestrian-Rail Grade Crossings at Highway-Rail Grade Crossings and Adjacent to Rail Passenger Stations

Combined pedestrian-rail grade and highway-rail grade crossings near rail stations are considerably more complex than pedestrian crossings not near a rail station and represent a special case of pedestrian-rail grade crossings. Some of the complicating factors are as follows:

- These pedestrian-rail crossings may be used by large groups of commuter rail patrons accessing the platforms and by pedestrians crossing the tracks.
- The level of pedestrian activity at a station crossing is directly associated with the departure and arrival of passenger trains and other transit such as buses and shuttles; it is also associated with the presence of parking lots.
- The stopping patterns and dwell times of trains affect the performance of the active warning devices.

© Copyright 2009, SCRRA. All Rights Reserved

The lead Engineer shall follow the same design process used for a pedestrian-rail grade crossing adjacent to a highway-rail grade, and determine the appropriate pedestrian treatments as provided in Section 4.11.

4.10.3 Pedestrian-Rail Grade Crossings at Stations (not located at Highway-Rail Grade Crossings)

Pedestrian-rail grade crossings at stations are primarily used by pedestrians accessing the platforms; however, in some circumstances they may also be used by pedestrians to cross the rail corridor.

In general, the level of pedestrian activity at a station crossing is directly associated with the departure and arrival of passenger trains. Because of this, **station pedestrian-rail grade crossings shall provide "full pedestrian treatments" (signage, channelization, active pedestrian warning devices with gates, and swing gates) and fencing, and shall not cross more than two tracks.**

There are two types of pedestrian-rail grade crossings at stations: (1) pedestrian-rail crossings grade crossings located past the ends of platforms (the new recommended design practice and standard); and (2) existing pedestrian-rail crossings in the middle of the platform (this design practice will no longer be allowed).

- **Station pedestrian-rail grade crossings shall be installed approximately 60 feet from the platform, and include full pedestrian treatments.** It is desirable to have the gates recover during normal station dwell time. Fencing should properly channelize pedestrians across the tracks at the pedestrian-rail grade crossing and deter the public from taking a "short cut" and trespassing across the tracks in prohibited areas.
- **New pedestrian-rail grade crossings in the middle of platforms shall not be allowed.** At existing stations that have a pedestrian-rail grade crossing in the middle of platform, the crossing shall be relocated at the end of the platform, or an underpass shall be constructed during major modifications to the station.

4.10.4 Pedestrian-Rail Grade Crossings (for Pedestrians Only)

New pedestrian-rail grade crossings shall not be allowed unless one or more existing pedestrian-rail or highway-rail grade crossings are closed.

Pedestrian-rail grade crossings shall follow the same design process as a pedestrian-rail grade crossing adjacent to a highway.

Pedestrian-rail grade crossings are typically associated with walking paths and bike trails adjacent to the railroad right-of-way. Pedestrians may be tempted to take shortcuts and trespass rather than use the designated pedestrian crossings. The lead Engineer shall pay careful attention to this hazard, and place the proper fencing and channelization to address this undesirable behavior. Where the right-of-way permits, the use of zigzag channelization, referred to in Section 4.7, should also be considered by the diagnostic team.

© Copyright 2009, SCRRA. All Rights Reserved

4.11 DESIGN PROCESS AND CONSIDERATION TABLE

Pedestrian-rail grade crossings should, in combination with the horns on locomotives, provide adequate warning devices which allow pedestrians and bicyclists to be warned of approaching trains and take appropriate action. During the design of the pedestrian-rail crossing, the lead Engineer shall consider these factors: 1) existing and future pedestrian and bicycle activity; 2) type of path (pedestrian only or combined pedestrian and bicycle); 3) number of tracks, track speeds, and number of trains; 4) proximity of rail passenger stations; 5) establishment of quiet zones; 6) travel distance across tracks to reach a location well outside of train dynamic envelope; 7) skew and vertical profile across the rail crossing; 8) visibility restrictions; 9) volume of pedestrian activity; 10) type of pedestrian activity (i.e., school, transit, hospital); 11) current and future development (including transit service and transit oriented development) in close proximity to the pedestrian-rail crossing; and 12) right-of-way constraints.

In the discussion of the design considerations, the term **"full pedestrian treatments" shall include signage, markings, channelization, fencing, active warning devices with gates, and swing gates.** *SCRRA's policy and practice is to apply full pedestrian treatments to highway-rail grade crossings consistent with the Pedestrian-Rail Grade Crossing Design Flowchart in Figure 4-2.*

The process in Section 4.11 and Figure 4-2 shall be used to determine the designs of pedestrian-rail grade crossings and appropriate warning treatments. This process shall be similar for any type of pedestrian-rail grade crossing, and defines the SCRRA recommended approach to the application of pedestrian treatments at pedestrian-rail grade crossings.

Decision Point 1

The existence of pedestrian activity shall be determined. This includes sidewalks leading up to the right-of-way, or evidence of pedestrians crossing at that location. The lead Engineer shall determine from the Highway Agency the existing and desired future status of any pedestrian related facilities in the highway and railroad rights-of-way, including easements, licenses, and C&M Agreements. SCRRA-recommended design practices and standards call for the addition of pedestrian treatments if the highway agency and the SCRRA are in agreement, and the highway agency legally allows pedestrians to utilize the highway right–of-way for crossing the track(s). The lead Engineer shall take the following actions when evidence of activity exists without pedestrian facilities:

- Determine the level of pedestrian activity and if the pedestrian activity is legal and supported by the local highway agency.
- Work with the local highway agency to modify sidewalks and bring in compliance with ADA requirements.
- If warranted, the design shall provide sidewalks over the railroad right-of-way and tracks.
- If warranted, take steps to prevent possible trespassing.

Decision Point 2

If the pedestrian-rail grade crossing is to be included in a quiet zone, then full pedestrian treatments for safety enhancements and quiet zone signage shall be applied.

© Copyright 2009, SCRRA. All Rights Reserved

Decision Point 3
The type of pedestrian-rail grade crossing is analyzed at this step. A station pedestrian-rail grade crossing or a pedestrian-rail grade crossing combined with a highway-rail grade crossing adjacent to the station (including any light rail stations located on within a common rail corridor) require full pedestrian treatments.

Decision Point 4
Is the pedestrian-rail grade crossing located within a 10-minute walking distance of a school, hospital, or other facility that can be expected to support disabled people? If the answer is yes to any of the listed facilities, then full pedestrian treatment shall be applied. If the answer is no, then is there significant pedestrian activity?

In order to answer no to whether there is significant pedestrian activity, the lead Engineer shall conduct a study to determine: the volume of pedestrian use, both on-peak and off-peak hours; the types of pedestrians (i.e., school children, elderly, disabled, bike riders, etc.); and pedestrians' behavior patterns (i.e., are pedestrians behaving in a safe manner when using the crossing and cognizant of potential train activity?). The lead Engineer will then discuss the results of this study with SCRRA and CPUC for clear consensus with the Safety Review Team as to the presence or absence of significant pedestrian activity. Full pedestrian treatments shall be applied for a yes answer to any of these questions.

Decision Point 5
Does the crossing have three or more main tracks? If the answer is yes, the pedestrian-rail grade crossing shall be grade separated. The grade separation can be an overhead or an underpass.

Decision Point 6
Does the crossing have two main tracks? This decision point is arranged so that a yes answer for this question accounts for two tracks in rural areas that see few pedestrians. In this case, it may not be appropriate to install full pedestrian treatments, but a request for a deviation not to do so must be submitted to the SCRRA. In an urban/metropolitan environment, full pedestrian treatments shall be applied when multiple tracks are in a location with limited visibility.

Decision Point 7
Does the crossing location have restricted visibility? Full pedestrian treatments shall be applied where there is limited visibility at crossings.

Decision Point 8
Is the right-of-way necessary to comply with the Manual unobtainable? If not, then full pedestrian treatments are required. SCRRA Standard Drawings include variations to the standard configuration, depending on the available right-of-way. In cases where the right-of-way required for the use of one of these standard applications cannot be acquired due to existing property uses, or because of other conditions, the lead Engineer shall request a deviation from standard and design a non-standard application.

5.0 GRADE SEPARATIONS

A “grade separation” is a means of separating the highway or pedestrians from the railroad tracks. Pedestrian grade separations are discussed briefly in Section 4 of the Manual. These may be accomplished with an underpass (the highway or pedestrian pathway passes under the railroad) or an overhead (the highway or pedestrian pathway crosses over the railroad). Outside of full highway-rail grade crossing closure, this is the most effective means of eliminating hazards related to these types of crossings. Refer to SCRRA’s Grade Separation Guidelines, located on the SCRRA website: http://www.metrolinktrains.com, for additional information on grade separations within SCRRA’s system.

6.0 RAILROAD ACTIVE WARNING AND TRAFFIC SIGNAL SYSTEM INTERCONNECTION CIRCUITS

6.1 INTERCONNECTION DESIGN

6.1.1 Background

Knowledge in the field of traffic signal preemption continues to evolve. Before designing a traffic signal preemption circuit, the lead Engineer should review the latest guidelines regarding traffic signal preemption as prepared by the Institute of Transportation Engineers, AREMA, CAMUTCD, CPUC, and other knowledgeable parties. Circuits described below are based on fail-safe closed loop methodology. A vital serial data circuit in accordance with IEEE Standard 1570-2002 may be used in lieu of the referenced circuits. Design and testing of traffic signal preemption interconnection circuits must be coordinated with the railroad and the agency having jurisdiction.

6.1.2 Interconnection Circuits

Older, widely-used traffic signal controller units use interconnection circuits between the railroad active warning system cabinet and the traffic control signal cabinet for preemption. This interconnection circuit consists of two wires/cables buried in the ground between the above two points. The approach of a train to a highway-rail grade crossing activates the electrical circuit, which in turn notifies or issues a call to the traffic signal controller preemptor. This establishes and maintains the preemption condition during the time the highway-rail grade crossing warning system is activated.

If there is a break in either or both wires or cables of the interconnection circuit (as, for example, when an excavation contractor inadvertently breaks the wires or cables), the traffic signal controller unit would respond as if a train were approaching and clear vehicles off the tracks—even though a train may not be approaching. The traffic signals remain in the preemption mode as long as the circuit remains open. If a train approaches during this scenario, the railroad active warning devices shall activate, yet the traffic signal preemption cannot be reinitiated to clear vehicles off the tracks.

One potential problem with the two wire/cables interconnection is a short in the circuits. If the wires/cables between the traffic signal control cabinet and the railroad active warning system cabinet became shorted together, the preemption relay in the traffic control signal cabinet could be falsely energized, even if the relay contact opened. In this case, the active warning devices would operate, but the traffic signal controller unit would not receive the preemption input. To address these potential problems, a supervised double-break, double-wire circuit shall be installed between the railroad and the traffic signal control system.

Supervisory Circuits

In order to detect a shorted or open interconnection circuit, two additional wires are used to provide a supervised circuit. The energy source originates at the traffic signal controller: two wires provide a return path, verifying the railroad preemption control relay is energized and there is no call for preemption. The two additional wires verify circuit integrity when the railroad issues a call for preemption. The circuit logic is “Exclusive OR.” One circuit must be energized and the other de-energized. If both circuits are

© Copyright 2009, SCRRA. All Rights Reserved

shown to be energized and both appear de-energized, it indicates a problem with the interconnect circuit. In that case, the traffic signal controller should assume a state known to be safe and issue a notification that there is a circuit deficiency.

Table 6-1 below identifies the number of wires and functions for the supervised interconnection circuit for simultaneous and advance preemptions:

Table 6-1. Interconnect Wire Assignments

Wires	Simultaneous Preemption	Advance Preemption
1	Source energy positive	Source energy positive
2	Source energy negative	Source energy negative
3	Preempt relay positive	Preempt relay positive
4	Preempt relay negative	Preempt relay negative
5	Supervision relay positive	Supervision relay positive
6	Supervision relay negative	Supervision relay negative
7		Gate down relay positive
8		Gate down relay negative
9		Traffic signal health positive
10		Traffic signal health negative

Gate-Down Circuits

A preempt trap condition occurs when the clear track green interval ends before the flashing-light signals start to flash and gates start to descend. It can occur with advance preemption.

One of the solutions to avoid preempt trap is to use a “gate down” circuit. The purpose of the “gate down” circuit is to prevent the traffic signal from leaving clear track green interval until it is determined that the gates controlling access over the tracks are fully lowered. The “gate down” circuit notifies the traffic signal controller unit when the gates controlling access over the tracks on the approach to the intersection have either fully lowered or the train has occupied the crossing. At the beginning of preemption, the traffic signal controller unit shall change to the clear track green interval as usual, but shall dwell in the clear track green interval until the “gate down” confirmation is received, or until a user-defined maximum time has expired.

Traffic Signal Health Check Circuits

A health check circuit provides an indication to the railroad active warning system cabinet when the traffic signals are in flashing mode or dark, such as when the controller is in failure. This health check circuit requires additional wires/cables between the traffic control signal cabinet and the railroad active warning system cabinet. Consideration should be given to a fail-safe design for the health check circuit so that there shall be no case in which the circuit shall remain energized while the traffic signals are flashing or dark.

© Copyright 2009, SCRRA. All Rights Reserved

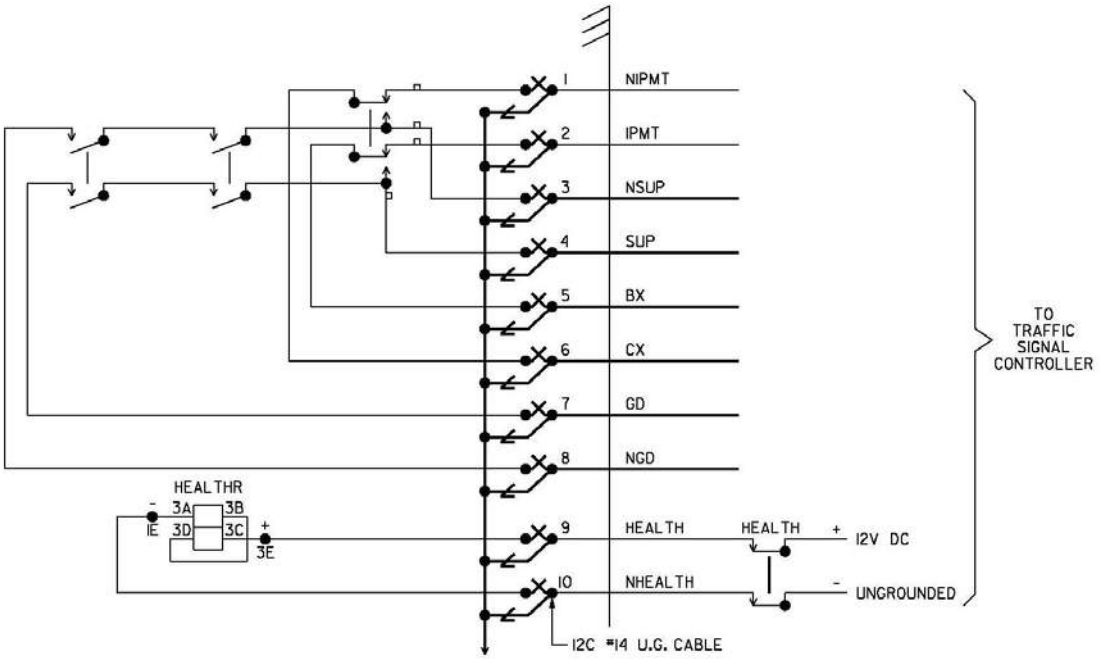

Figure 6-1. Interconnection Circuits with Supervision, Gate-Down Circuitry, and Health Circuit

Interconnection Circuits

In Figure 6-1 above, energy (BX, CX) is supplied to the railroad from the traffic signal controller. The TCPR is the relay that provides the call to preempt. This relay is normally energized and returns energy to the inputs of the traffic signal controller. When a train is detected and the call for preemption is generated, the TCPR is de-energized and the energy is returned to the traffic signal controller on the wires labeled SUP and NSUP. This is the supervisory circuit. The supervisory circuit must be de-energized and the preemption circuit energized, or vice versa. This indicates the integrity of the interconnection circuitry to the traffic signal controller. If both are energized, or both are de-energized, that is indicative of a fault in the interconnection.

The wires labeled GD and NGD are energized when the gates approaching the signalized intersection are down after a call to preempt. Upon receipt of these inputs, the traffic signal controller can terminate track clearance green (TCG) and transition to the phases allowed during preemption. These gate-down contacts may be bypassed by contacts of the island circuit so that TCG can terminate when the island is occupied in the event of a gate that does not fully lower.

The health of the traffic signal controller is communicated to the railroad via the health relay. If the traffic signal controller is not functioning or in all-flash mode, the health relay shall be de-energized; thus the highway-rail grade crossing warning system may cause the gates to be down longer for an approaching train, since the traffic signals shall not be able to clear out traffic as designed.

© Copyright 2009, SCRRA. All Rights Reserved

When a serial connection is used, this information and more can be conveyed between the railroad control devices and the traffic signal control devices. This enhances the operation of both systems.

6.1.3 Not-to-Exceed Timing Circuits

Railroads sometimes use the “not-to-exceed” timing circuits to control the maximum advance preemption time. This helps in eliminating a preempt trap.

6.1.3 Second Train Logic

Where there is more than one track, a second train can approach at any time. If there is an advanced preemption interconnection between the traffic signals and the railroad, the appearance of a second train can hold the traffic signals in preemption and have the gates rise momentarily, allowing vehicles to pull up onto the tracks. Where second train logic is employed, if a second train is detected on the outer approach, the gates shall remain down until after the second train passes. Second train logic may be employed where no traffic signals are present if circumstances warrant.

7.0 HIGHWAY-RAIL GRADE CROSSING PROJECT IMPLEMENTATION

7.1 HIGHWAY-RAIL GRADE CROSSING DESIGN PROCESS

The process for the proper analysis and design of highway-rail grade crossing improvements involves several different engineering disciplines, as well as the highway agency, the SCRRA, and the CPUC in regulatory roles. A typical highway-rail grade crossing design considers motorist behavior, pedestrian behavior, civil design, railroad design, railroad signal design, and traffic engineering plus application of CPUC, FRA and MUTCD regulations and standards. This design process involves all engineers involved in the ultimate configuration of the crossing, from the onset of design. The process is outlined in Figure 3-2.

The design of the highway-rail grade crossing is a dynamic iterative process, with the design evolving as different levels of design are reached. The ultimate configuration of the highway-rail grade crossing may be significantly different from the initial concept.

Modifications of a highway-rail grade crossing must go through the CPUC approval process. Because of this, the lead Engineer should allow time in the design process for diagnostic reviews by the engineering team (see Section 7-3). At these diagnostic reviews, the ultimate scope of the project, and ultimately the design, shall be determined. These diagnostics are an important part of the design process, and provide the necessary input from stakeholders to determine the effectiveness of the proposed changes. The lead Engineer shall take note and record the results of the diagnostic meetings and attempt to incorporate the appropriate recommendations and changes into the design.

The design of the highway-rail grade crossing shall include the input received from the different departments within SCRRA. The overall functionality and effectiveness of a highway-rail grade crossing shall be determined by operational and maintenance needs as well as engineering design needs. The input from these departments early in the engineering process shall provide important information that shall affect the overall design of the crossing. Designs that do not give adequate attention to SCRRA inter-departmental input often fall short of meeting the overall goals of the project, and often require substantial rework in order to accommodate those needs. The lead Engineer shall include SCRRA as an active participant in the design process in order to ensure that the recommendations in this Manual and the input of the SCRRA are adequately addressed.

7.2 DESIGN GOALS

The purpose of, and need for, the modifications should be set forth at the start of design. This will form the basis for the overall design of the project, and set the ultimate goals for the improvements. The evolving diagnostic process will define changes in those ultimate goals, changes that shall ultimately decide the outcome of the final design.

The initial efforts in the design should include meetings and field surveys with SCRRA staff to determine other factors that could affect the construction of the proposed improvements. During the development of the overall scope of the improvements, the lead Engineer should know the extent of work that will be necessary to implement the improvements. For example, the addition of a lane shall require the widening of the

© Copyright 2009, SCRRA. All Rights Reserved

overall crossing. It may be necessary to recommend a complete reconstruction of the highway-rail grade crossing to ensure that the ultimate construction does not create other impacts or maintenance concerns.

The overall schedule of the crossing construction should be compared with SCRRA maintenance plans in the area. During this comparison, a plan of construction can be incorporated into a regular maintenance cycle so as meet the operational needs of the railroad. This is especially important in areas where heavy rail traffic minimizes the opportunities to remove tracks from service in order to perform construction and maintenance.

7.3 DIAGNOSTICS

7.3.1 Introduction

To make improvements to a crossing, construct a new crossing, or close a crossing, a series of diagnostic reviews shall be performed. As shown in Figure 3-1, before commencement of design, a conceptual diagnostic site meeting shall be completed with the purpose of understanding the existing conditions of the crossing. After the 30% Design, but before the Pre-Final 90% designs can be approved, a second diagnostic site meeting shall be completed to predict how the proposed changes would affect and improve the crossing.

The second diagnostic meeting will have the benefit of having all of the site survey and investigation work done and much of the design completed. During the second diagnostic meeting, any significant changes from the assumptions or recommendations in the first diagnostic meeting and any proposed requests for waivers from the Manual should be discussed. After completion of the design and construction, a final diagnostic site meeting shall be completed to verify that the new improvements allow the highway-rail grade crossing to function as intended. Information from SCRRA, FRA, inventories, and accident summaries—as well as information from local highway traffic departments—can help to create a clearer picture of how a highway-rail grade crossing functions and what problems need to be addressed. The diagnostic processes use a simple survey procedure, utilizing individuals in various areas of expertise to analyze the crossing.

The diagnostic team consists of knowledgeable representatives of stakeholders in a highway-rail grade crossing. Using highway-rail grade crossing safety management principles, the team evaluates conditions at a highway-rail grade crossing to make determinations or recommendations concerning safety needs. At a minimum, this diagnostic team needs to include: representatives of the highway agency or authority with jurisdiction over the highway; the SCRRA; and the CPUC (reference: CA MUTCD Part 8). Other participants in the diagnostic team may include the BNSF or UPRR railroads, and representatives of SCRRA member agencies.

The diagnostic team needs to be interdisciplinary to ensure that all factors relating to the operational and physical characteristics of the highway-rail grade crossing are properly identified, analyzed, and mitigated as necessary. The team shall have the expertise to provide a thorough engineering analysis of the physical and operational aspects of the highway-rail grade crossing, and provide input into the overall effectiveness and safety of the proposed design of the crossing.

© Copyright 2009, SCRRA. All Rights Reserved

Consultation with all stakeholders is required to ensure that the design of the highway-rail grade crossing shall, to the extent possible, comply with the recommended design practices and standards in this Manual.

In addition to the engineering expertise that should be included in the diagnostic, any stakeholder with an interest in the highway-rail grade crossing, or with information regarding the highway-rail grade crossing, should be included. The diagnostic team is responsible for bringing all factors affecting the design and ultimate operation of the highway-rail grade crossing into the discussion of the overall design.

7.3.2 Diagnostic Process

The diagnostic process necessary to begin and complete the design of the highway-rail grade crossing is a several-step process that is outlined in Figure 7-1. The diagnostic team should analyze the highway-rail grade crossing at various steps along the way to assess the progress of the overall design. Before starting the diagnostic process, the following should be addressed:

- Purpose of and need for improvements
- Existing conditions
- Existing deficiencies from the recommendations in the Manual
- Funding
- Lead agency
- Roles and responsibilities

Defining the purpose of, and need for, the improvements will set the stage for the overall diagnostic process. The engineering team, working on an established purpose and need, shall analyze the reasons for the proposed improvements and develop the overall strategy on the design of the improvements and the development of engineering solutions.

While funding is not a determining factor in developing the overall safety improvements at a crossing, it does affect the overall approach to the design, construction, and maintenance of the crossing. In many cases, the purpose of the modifications is directly related to funding sources and requirements that define the process. These responsibilities and funding sources for the project should be determined at the onset of the design process.

The roles and responsibilities of each organization represented at the diagnostic review shall be established prior to the commencement of the diagnostic process.

© Copyright 2009, SCRRA. All Rights Reserved

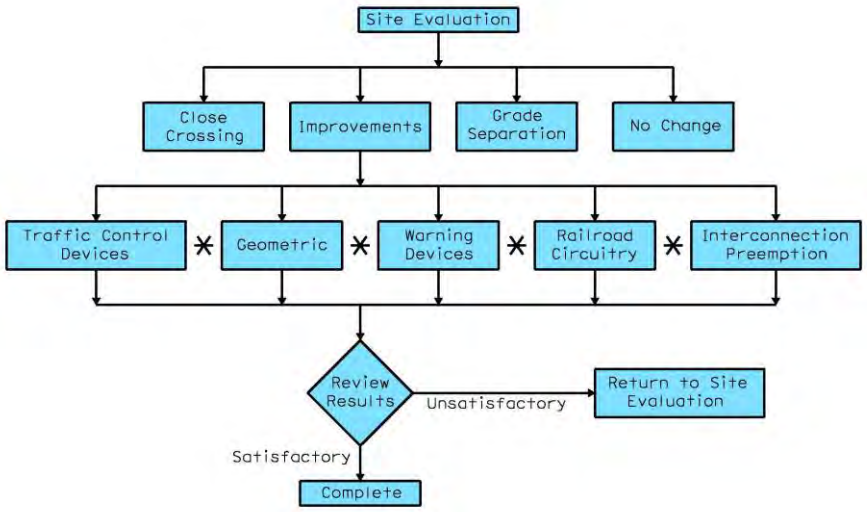

Figure 7-1. Diagnostic Meeting Process

Once the above-mentioned issues have been addressed, the team begins the diagnostic process in accordance with the above Figure. As shown, the first steps are deciding upon the first level: namely, whether the highway-rail grade crossing can be closed, or should be grade separated (usually this has been determined by the lead agency, or the project proponent, prior to commencing the diagnostic process); whether no changes should be made; or whether improvements are to be proposed. In general, the proposed improvements should bring the highway-grade rail crossing in compliance with the recommendations in the Manual. Once the team decides improvements are needed at the crossing, each of the elements (comprising the second level of the figure) is discussed, and improvements, if any, are proposed. Upon completion of the first diagnostic site meeting, the conceptual scope of the improvements is agreed upon between the stakeholders and the design phase of the project can begin.

In order to incorporate current conditions at an existing, or proposed, highway-rail grade crossing into the conceptual design of a highway-rail grade crossing, field observations are needed to record key factors that may affect the capabilities and success of the design. At this stage of the project general observations should be recorded, including but not limited to factors such as types of warning devices, vehicle and pedestrian conditions, vehicle-train and pedestrian-train conflict points, highway-rail grade crossing surface conditions, adjacent intersection and driveway conflicts, train speed, train density, train operating patterns, school bus volumes, location of schools in the vicinity, location of stations, illegal/risky vehicle and pedestrian maneuvers, sight distances, and pavement striping.

The next level of the figure, “review results”, represents the design diagnostic stage, and builds on the information gathered in the concept diagnostic by facilitating a more in-

© Copyright 2009, SCRRA. All Rights Reserved

depth analysis, from which final design recommendations for highway-rail grade crossing betterment are achieved. This diagnostic occurs after design has begun, usually following the completion of the 90% Design but sometimes as early as the 65% Design, but only after unique information regarding the conditions at the highway-rail grade crossing has been determined. This information may include, but is not limited to, factors such as additional traffic behavior, utility information, drainage information, or other civil-related information that will affect the overall design and operation of the crossing.

At this stage in the design, additional detailed data regarding design vehicles, current preemption phasing, current intersection phasing, annual average daily traffic (AADT), train speeds, train types, number of trains per day, train detection type, and the percent of trucks using the highway-rail grade crossing may be necessary.

The design diagnostic gives the design team a foundation to proceed with their highway-rail grade crossing improvement design.

The post-construction diagnostic site meeting also is representative of the "review results" level of the diagnostic process figure, in that the project is not satisfactorily completed until this process is completed and all the stakeholders agree on the results of the improvements.

7.3.3 Diagnostic Form

The diagnostic form is used by the diagnostic team as a representative checklist of existing highway-rail grade crossing conditions, noticeable conflicts, necessary changes required, etc. Appendix D and D-1 show the SCRRA diagnostic form and instructions for its effective use. The diagnostic form is structured to allow users to easily gather pertinent information about the crossing. The form also accommodates extra notes and diagrams that help to clarify the current conditions at the crossing.

7.4 NEW HIGHWAY-RAIL GRADE CROSSINGS

Refer to Appendix H for SCRRA's Board adopted policy on new crossings. *Before considering a new highway-rail grade crossing, the first alternative that should always be considered is a grade-separated crossing. It is SCRRA's policy, as well as State and National policy, to discourage the construction of new at-grade highway-rail grade crossings.* However, there are instances where the additional highway-rail grade crossings are in the public's best interest, and where the construction of a grade separation is not feasible for a variety of reasons. In most cases, the construction of a new highway-rail grade crossing must be offset by the closure of one or more existing crossings.

A proposed new highway-rail grade crossing shall only be permitted if there is a clear public need, funding is sufficient, and the appropriate measures have been taken to mitigate the hazards associated with the new crossing. The CPUC will ultimately determine whether a new grade crossing is warranted; they should be contacted very early in the process to consider any new highway-rail grade crossing. A new highway-rail grade crossing must go through an environmental study (either a negative declaration, or environmental impact report), proper diagnostics, engineering, and a regulatory process for approval. Prior to beginning the planning for a new crossing, a Letter Agreement to reimburse the SCRRA for its review and participation in the

© Copyright 2009, SCRRA. All Rights Reserved

conceptual planning process should be developed; if design is required, a Design Services Agreement with the SCRRA should be developed. The agency initiating the highway-rail grade crossing shall have in place a fully executed C&M Agreement with SCRRA before any construction begins. Refer to Section 2.5 for further information regarding Letter and Services Agreements, C&M Agreements, rights-of-entry, and right-of-way procedures related to the construction of new crossings or the modification of existing highway-rail grade crossings.

All costs related to the construction of the new crossing, including those borne by SCRRA for design or programming, shall be the responsibility of the initiating agency. When no highway-rail grade crossing closures are included in the project, the involved parties must agree on the assignment of responsibility for providing financing for ongoing maintenance of the highway-rail grade crossing surface and traffic control devices. Closing one or more adjacent crossings shall be considered whenever a new highway-rail grade crossing is initiated.

7.5 HIGHWAY-RAIL GRADE CROSSING ENHANCEMENTS

An existing highway-rail grade crossing may be modified through the engineering of improvements that enhance the overall safety and operation of the crossing. Enhancing the safety of a crossing will be best achieved by incorporating the recommended design practices and standards in this Manual.

7.6 HIGHWAY-RAIL GRADE CROSSING CLOSURE

Closure of a highway-rail grade crossing is accomplished by eliminating highway access to the crossing. Because a highway-rail grade crossing closure is a method of eliminating hazards at a highway-rail grade crossing, closures costs may qualify for funding through the Section 130 Program. Refer to Section 7.10.2 for additional information regarding the Section 130 Program. Closure of a highway-rail grade crossing shall always be considered as an alternative to the modification of an existing crossing.

Closure of an existing highway-rail grade crossing will typically require a public process, an environmental process, and “street vacation” to address the property rights.

A highway-rail grade crossing closure may be the result of a corridor highway-rail grade crossing consolidation project. In this case, several crossings may be consolidated into fewer crossings, thereby minimizing the relative hazards within the corridor.

7.7 SEALED CORRIDORS

The SCRRA Sealed Corridor Program is a comprehensive strategy to minimize access to the railroad corridor. Some examples of sealed corridor enhancements are as follows:

7.7.1 Sealed Corridor Safety Enhancements

- Exit gates
- Median separators and raised islands
- New signs and pavement markings
- Advanced highway-rail grade crossing signal analyzers

© Copyright 2009, SCRRA. All Rights Reserved

- Locked right-of-way gates and fencing
- Highway-rail grade crossing geometry improvements
- Grade separation or closing of crossings
- Advanced traffic signal technology
- Advanced pedestrian treatments

Where applied at multiple crossings, a system of prioritization shall be adopted in order to equitably apply sealed corridor technology within the design.

7.8 QUIET ZONES

A "quiet zone" is an area that qualifies under the FRA final rule, "The Use of Locomotive Horns at Highway-rail grade crossings," on the use of locomotive horns at highway-rail grade crossings. This rule is intended to maintain public safety while responding to concerns of communities that have sought relief from unwanted train horn noise. Areas that may qualify for quiet zones are those in which the placement of traffic warning devices has been approved as providing enough safety protection so that sounding of a locomotive horn is unnecessary. A quiet zone is created upon notification of establishment by the requesting agency, usually the local municipality. The process of creating and authorizing a quiet zone is defined in CFR 49 Part 222.43. The FRA shall determine that a quiet zone exists after they have reviewed, qualified, and approved the highway-rail grade crossing improvements. Local public authorities are the only entities that can designate or apply for quiet zone status. *The highway agency who owns the highway shall also bear the initial and recurring costs if SCRRA is required to install and maintain additional equipment.* SCRRA has adopted procedures for the pursuit of a quiet zone within the SCRRA system. Also, additional information regarding the creation of quiet zones can be found on the FRA website at http://www.fra.dot.gov.

Outside quiet zones, locomotives must sound their horns 15-20 seconds prior to entering the highway-rail grade crossing, but not if the train is more than a quarter-mile away from the crossing. Most state laws and railroad rules require that locomotives sound their horn a quarter-mile prior to entering the crossing, and continue until the highway-rail grade crossing is occupied by the locomotive.

7.9 SUBMITTALS

7.9.1 Engineering Drawings and Specifications

The lead Engineer shall submit to SCRRA project plans, specifications, and estimates at each submittal stage, in accordance with SCRRA Engineering Standards. The approved size for documents shall be 11" × 17" scaled for contract drawings, originally submitted plans for shop drawings, high-resolution color electronic files on read-only compact discs, and for photographs; all other documents should be 8½" × 11".

7.9.2 Traffic Preemption Calculations and Drawings

Traffic signal design, drawings, installation procedures, preemption timing calculations, and preemption sequences shall be signed and stamped by a registered professional Engineer (civil or traffic) licensed to practice in the State of California. The design drawings shall show intersection plan and details, phase diagrams, signal standard

© Copyright 2009, SCRRA. All Rights Reserved

schedules, conductor schedules, estimated material, and construction notes, as per Caltrans's standard drawing format. The highway agency shall also complete and submit the following:

- The completed "LADOT Railroad Preemption Worksheet" (see Appendix E) showing calculations for each approach to the crossing.
- A study of the variation in total warning time and advance preemption time as a result of railroad operations and variation in traffic signal operation. Both the "worst case" (maximum right-of-way transfer time) scenario and the "best case" (minimum right-of-way transfer time) scenario shall be considered for the determination of the maximum highway traffic signal preemption time and the design of preemption sequences.

If advance preemption is designed, a design, signed and stamped by a registered professional Engineer (civil or traffic) licensed to practice in the State of California, shall be submitted to SCRRA for review and approval.

7.9.3 Design Phase

The highway agency shall submit Preliminary Design (30% Design), Interim Design (60% Design), 90% Design, and Final Design (100% Design) documents to SCRRA.

Five (5) 11"x17" sets of plans and specifications shall be submitted to SCRRA during the design phase. Four weeks will be allowed for each review. If a consultant is used for the review process, the consultant and the lead Engineer shall be free to communicate and resolve all design issues.

Any deviations or design exception from this Manual shall be considered by the SCRRA through the submittal of a Design Exception Form, attached as Appendix F.

7.9.4 Construction Phase

For any project that infringes on SCRRA or member agency property, the initiating agency shall submit two sets of drawings showing details of construction affecting the tracks and property; specifications; and plans and procedures for excavation, demolition, falsework, sheeting and shoring, drainage, and temporary traffic control.

7.9.5 As-Built Phase

The highway agency shall submit five (5) hardcopy sets, and one (1) electronic set using MicroStation CAD software, of As-Built documents to SCRRA at the completion of the project, and prior to closing of the project.

7.10 FUNDING

7.10.1 Introduction

Any party that is interested in creating or modifying a highway-rail grade crossing may be responsible for financing of the highway-rail grade crossing enhancements. However, financing can be funded by the Federal Aid At-Grade Highway-Rail Grade Crossing Program (Section 130 Program). Some funding for grade separations is available under

© Copyright 2009, SCRRA. All Rights Reserved

Section 190. Additional funding may be available through other state or federal programs.

7.10.2 Section 130

Section 130 of the United State Code, Title 23 (23 U.S.C. 130), provides federal funds for the elimination of hazards at existing highway-rail grade crossings. The purpose of the Section 130 Program is to reduce the number, severity, and potential of hazards to motorists, bicyclists, and pedestrians at highway-rail grade crossings. This program is a cooperative effort between the FHWA, Caltrans, the CPUC, railroad companies, and highway agencies. Additional information can be found on the FRA website at http://www.fra.dot.gov.

In order to authorize the highway-rail grade crossing under the Section 130 Program, the highway-rail grade crossing must go through a series of diagnostic reviews initiated by the railroad (in association with the highway agency, CPUC, and Caltrans), and be eligible to receive funding. Not all highway-rail grade crossings are eligible to be financed by the Section 130 Program. Highway-rail grade crossings that are not eligible for the Section 130 Program are as follows:

- Pedestrian-rail grade crossings solely for the use of pedestrians or bicyclists, including station crossings
- Highway-rail grade crossings used by light rail vehicles, either solely, or in conjunction with freight operation
- Private highway-rail grade crossings
- Existing grade-separated crossings

The submittal of a highway-rail grade crossing for Section 130 funding shall include the documented record of a thorough diagnostic process. This is accomplished at the concept level of engineering for programming into the system. It is important to consider the timeline associated with the programming of Section 130 associated modifications. The normal programming of Section 130 funding occurs several years in advance of construction. Because of this, it is important to allow for this time within the implementation schedule for the proposed enhancements.

In order to be properly considered for Section 130 funding, a complete engineering analysis of the highway-rail grade crossing is required. As part of this analysis, a hazard analysis is necessary to properly determine the level of highway-rail grade crossing improvements to be installed under the plan. Further work involves prioritization of the funding request with requests from other crossings throughout California. During the early stages of the project, it is important for the involved parties to consider the sources of funding and the requirements associated with that funding. In addition, the purpose and need of the proposed improvements should be considered for eligibility under the Section 130 Program.

7.10.3 Section 190

The State of California has instituted the Section 190 Program to provide funding to highway agencies to separate public highway-rail grade crossings, eliminate existing highway-rail grade crossings, or provide funds to highway agencies to grade separate

© Copyright 2009, SCRRA. All Rights Reserved

existing crossings. This funding is based upon a priority list developed by analyzing the hazards related to the crossing. Factors such as traffic demands and accident history play a large role in this prioritization. When the entire cost of the grade separation is considered, this funding may be a small percentage of the construction costs for the project.

This program is administered by the CPUC and Caltrans. Additional information can be found on the CPUC website at http://www.cpuc.ca.gov.

8.0 SPECIAL ISSUES

8.1 ADJACENT FREIGHT OR TRANSIT TRACKS

The location of adjacent track(s) owned and operated by another railroad company or transit agency creates conditions that need to be evaluated during the design of warning devices for vehicles and pedestrians. It is currently beyond the scope of the Manual.

8.2 ADJACENT DEVELOPMENT

Redevelopment and new developments have afforded the opportunity to control the location of driveway approaches that are close to the highway-rail grade crossing (see Section 3.7). The SCRRA Engineer shall review the development plans, coordinate with the highway agency, and ask the agency to impose "conditions for development approval" relative to development street access.

Adjacent residential and commercial development to highway-rail grade crossings may substantially increase the volume of highway traffic over a crossing. This may occur during certain times of day, such as during peak rush hour periods, or during certain times of the year. Schools near highway-rail grade crossings may generate increased volumes of vehicular and pedestrian traffic before and after school hours. Likewise, certain entertainment/sporting venues may increase vehicular and pedestrian traffic before, and after, an event. Observations of a highway-rail grade crossing during different times of the day and year should take place to understand how the dynamics of adjacent development affect a highway-rail grade crossing. The selection of appropriate traffic control/warning devices shall be installed to mitigate these affects.

8.3 LIGHT RAIL TRANSIT

Currently, the SCRRA System does not include any Light Rail Transit (LRT) systems that share the rail corridor with SCRRA trains. This section of the Manual may be updated in the event of introduction of an LRT system(s).Light Rail Transit (LRT) systems are becoming more prevalent in urban areas. The Gold Line Foothill LRT is proposing to share the existing SCRRA's Pasadena subdivision from Azusa to Montclair in a common shared corridor that would potentially include over 25 shared grade crossings. LRT systems operate very differently from other commuter and freight rail systems; therefore, the close proximity of these systems warrants special attention. When considering shared corridors and grade crossings, the designer shall become thoroughly familiar with the July 10, 2000 joint FRA/FTA statement addressing the General System and Rail Transit Common Corridor Safety Program and the FRA 2008 PowerPoint presentation by Ed Pritchard of FRA on the same subject. The link is as follows: http://www.techtransfer.berkeley.edu/railroad08downloads/pritchard.pdf.

LRT crossings adjacent to SCRRA crossings shall be addressed individually from the beginning of the project. **LRT (Light Rail Transit) tracks located adjacent to SCRRA highway-rail and pedestrian-rail grade crossings shall be analyzed as a joint system. If the combined number of SCRRA and LRT tracks exceeds three (3), a grade separation shall be constructed.** Refer to Section 3.13 for additional information on adjacent highway-rail grade crossings.

© Copyright 2009, SCRRA. All Rights Reserved

The nature of LRT operations places stations in closer proximity to each other than commuter rail operations. As such, an LRT vehicle may be stopped at a station while commuter operations continue pass by. The lead Engineer shall analyze crossings where LRT and SCRRA operations are closely related yet mutually exclusive.

8.4 LANDSCAPING

It is important that landscaping not decrease the level of safety at a highway-rail grade crossing by impeding the visibility of any active or passive warning signals or signage by motorists, pedestrians, or railroad engineer.

SCRRA has developed Landscaping Design Guidelines to provide uniform and consistent standards for landscaping during design, construction, and maintenance on commuter and freight railroad rights-of-way. SCRRA staff worked together with the member agencies' staff in preparing and finalizing these guidelines. These proposed guidelines are intended to provide minimum standards and general requirements for the design, construction, and maintenance of landscaping in a manner compatible with safe operation of railroad corridors and with the rail capacity expansions envisioned.

As mentioned previously in the Manual, in general, within 100 feet of the crossing, stamped concrete or other hardscape materials, infill for median islands is the standard landscape treatment for median islands.

8.5 BIKEWAYS AND TRAILS

The addition of bikeways and trails within, or adjacent to, the railroad right-of-way presents a challenge to both the highway agency and railroad operators. (See Figure 8-1 for an example of a bikeway adjacent to active railroad tracks). Of particular concern to SCRRA is the activity of pedestrians and bicyclists within the right-of-way. Also, the incorporation of a bike path that is adjacent to the highway-rail grade crossing intersection introduces another element to be accounted for within the analysis and determination of preemption requirements for the highway-rail grade crossing. Refer to Section 6.0, Railroad Signal Interconnect, for provisions governing the design of the interconnection of the traffic signal system with the railroad signal system. SCRRA has developed "Rail with Trail Design Guidelines" that shall be referred to whenever a bikeway is to be constructed within railroad right-of-way. The highway agency shall follow this procedure in the development of the trail, including improvements to site within and adjacent to the railroad right of way, and may include the installation of additional fencing and channelization, modified traffic signals, pedestrian treatments, and additional highway-rail grade crossing warning devices. The initiating agency shall facilitate a diagnostic review and highway-rail grade crossing design process to mitigate these effects.

© Copyright 2009, SCRRA. All Rights Reserved

Figure 8-2. Bikeway and Trail Separation

8.6 FENCING AND SECURITY GATES

It is SCRRA's desire to keep trespassers out of the operating railroad corridor. The design of the travelway shall incorporate adequate fencing to limit access by trespassers onto SCRRA railroad tracks. This fence shall be tubular steel fencing or welded wire mesh fencing as per SCRRA Engineering Standards. The fence shall be located at the edge of the trail, as defined by the appropriate agreement.

A three rail split-rail fence, in combination with landscaping that can serve as a positive barrier between the track and the trail, may be used in rural or environmentally- sensitive areas, if approved by SCRRA and the member agency. Since newly planted landscaping may take a few years before it becomes an effective barrier, suitable temporary measures may be required until the landscaping has sufficiently matured. Any landscaping must be maintained so it does not impede the visibility of any active or passive warning devices—or signage—by trains, pedestrians or engineers.

It is the policy of SCRRA to maintain access along its right-of-way for maintenance and inspection. The travelway fencing shall not be constructed so as to limit this access. Should access points be necessary, the fencing shall incorporate gates at locations as per SCRRA Engineering Standards. These gates shall be secured with SCRRA locks. The highway agency shall install "No Trespassing" warning signs, as per SCRRA Engineering Standard.

© Copyright 2009, SCRRA. All Rights Reserved

The height of the fence within 150 feet of highway-rail grade crossings shall be four (4) feet. The height of the fence in the balance of the right-of-way shall be at least six (6) feet.

All access points to SCRRA rights-of-way at highway-rail grade crossings shall utilize a right-of-way fence in accordance with SCRRA Engineering Standards. These gates are to be installed in accordance with the instructions shown on these drawings, in particular as follows:

- The gate shall be placed to allow a maintenance vehicle to park prior to opening the gate.
- Gate shall swing away from the tracks.
- The installation of the gate shall be incorporated into the proposed fencing plan to adequately secure the rights-of-way.
- Bollards, K-Rails, or other substantial barriers shall be used with the right-of-way gates to provide a maximum level of security.

8.7 LIGHTING

The highway agency shall provide lighting for the travelway to maintain a safe environment for the users. Local, state, and federal guidelines, as well as industry standards for lighting, shall be incorporated into the design.

© Copyright 2009, SCRRA. All Rights Reserved

9.0 CONSTRUCTION

9.1 GENERAL

As mentioned previously, construction cannot begin until a C&M Agreement and a SCRRA Form No. 6 (Temporary Right-of-Entry Agreement) have been executed by SCRRA, and workers have completed railroad safety training. The construction shall meet requirements stated in SCRRA's Standard Specifications, guidelines, and Engineering Standards. It shall also meet applicable AREMA requirements.

Any damage to rails, ties, structures, embankments, third-party property, signal and communications equipment, or any other facility shall be repaired, at the highway agency's or its contractor's expense, to a condition equal to or better than the condition prior to entry (and to a level accepted by SCRRA). The highway agency or its contractor agrees to reimburse SCRRA, and any affected operating railroads, for any and all costs and expenses incurred as a result of their work, which may result in the following:

- Unscheduled delay to the trains, or interference in any manner with the operation of trains
- Unscheduled disruption to normal train operation
- Unreasonable inconvenience to the public or private users of the system
- Loss of revenue
- Alternative method of transportation for passengers

The **highway agency and its contractors shall comply with the rules and regulations contained in the current editions of the SCRRA documents (listed below) during construction of the project.** These SCRRA forms are available on SCRRA's website:

- Temporary Right-of-Entry Agreement (SCRRA Form 6).
- Rules and Requirements for Construction on Railroad Property (SCRRA Form 37).
- General Safety Regulations for Construction/Maintenance Activity on Railway Property.
- Applicable SCRRA Engineering Standards.

The highway agency shall notify SCRRA 30 working days prior to beginning work on the right-of-way, and secure any protection SCRRA deems necessary. The highway agency shall be responsible for reimbursing SCRRA the actual costs and expenses incurred by SCRRA for all services and work performed in connection with the highway-rail grade crossing project, including a computed surcharge representing SCRRA's costs for administration and management.

The latest version of SCRRA Standard Specifications for work within rights-of-way operated and maintained by SCRRA shall be included within the contract documents. The list of these specifications is shown in Appendix I in these standards, and the latest electronic version of these specifications is available from SCRRA's Engineering Department upon request.

© Copyright 2009, SCRRA. All Rights Reserved

9.2 EXCAVATION AND BACKFILL

The excavation and backfill shall meet all the requirements shown in SCRRA Standard Specification 02300, Earthwork. Excavation for construction of footings, piers, columns, walls, or other facilities that require shoring to support active tracks shall comply with AREMA requirements and standard specifications. The contractor shall perform excavation and grading so that the finished surfaces are in uniform planes, with no abrupt breaks in surface, and have positive drainage on the right-of-way away from the track structure.

9.3 EROSION CONTROL

The general plans for the bridge shall indicate the proposed methods of erosion control, and must specifically address means to prevent silt accumulation in ditches and culverts and prevent fouling the track ballast, sub-ballast, and existing drainage systems. Existing track ditches shall be maintained at all times throughout the construction period. After construction has been completed, all erosion control devices and all deposits of silt shall be removed, and affected ditches restored. Approval of the erosion control plan does not relieve the submitting agency, consultant, or contractor of the ultimate responsibility and liability for a satisfactory erosion control plan.

9.4 TEMPORARY TRAFFIC CONTROL

SCRRA's "Temporary Traffic Control Guidelines for Highway-Rail Grade Crossings" shall be referenced for further information on definitions, referenced standards, traffic control plans, submittals, traffic control elements, and responsibility/authority for temporary traffic control at highway-rail grade crossings. The guidelines provide acceptable alternatives and procedures to prescribe appropriate temporary traffic control measures at highway-rail grade crossings.

The construction of a new highway-rail grade crossing, or the modification of an existing crossing, shall require temporary traffic control. A temporary traffic control plan, including traffic detours, shall be prepared in accordance with Part 6 of the CA MUTCD, the WATCH Manual, and the local highway agency's requirements. **When a highway-rail grade crossing exists either within, or in the vicinity of, a temporary traffic control zone, lane restrictions, flagging, or other operations shall not be performed in a manner that would cause vehicles to stop on the railroad tracks unless a law enforcement officer or qualified flagger is provided at the highway-rail grade crossing to minimize the possibility of vehicles stopping on the tracks.** This applies even if automatic warning devices are in place.

SCRRA shall be contacted when the initial planning begins for any temporary traffic control zone that may, directly or indirectly, influence the flow of traffic over highway-rail grade crossings. Responsible agencies (along with others affected, such as emergency services and businesses) should meet to plan appropriate traffic detours and the necessary signing, marking, and flagging requirements for operations during temporary traffic control activities. Consideration should be given to: the length of time the highway-rail grade crossing will be closed; highway classification; type of vehicle and traffic affected; the time of day; and the materials and techniques of repair. Temporary traffic control operations should minimize the inconvenience, delay, and crash potential related

© Copyright 2009, SCRRA. All Rights Reserved

to affected traffic. Temporary traffic control activities should not be permitted to extensively prolong the closing of a crossing.

Temporary traffic control shall be used when a maintenance or construction activity is located on the railroad right-of-way, or when activity in the vicinity of a highway-rail grade crossing could result in queuing of vehicles across the railroad tracks. The issue of temporary traffic control shall be addressed within the specifications for the crossing.

9.5 UTILITY ADJUSTMENTS

The existing utilities shall be located prior to commencing any excavations. *Approval of the project by SCRRA does not constitute a representation as to the accuracy or completeness of location or the existence or non-existence of any utilities or structures within the limits of this project.* The appropriate regional notification center [Underground Service Alert (DIGALERT) at (800) 227-2600], railway companies, and utility companies shall be notified prior to performing any excavation close to any underground pipeline, conduit, duct, wire, or other structure. Refer to SCRRA's website www.metrolinktrains.com to ensure proper contracts and phone numbers. SCRRA is not a member of DIGALERT; it is, therefore, necessary to call SCRRA's signal department phone number (refer to SCRRA's website) to mark, at highway agency's or contractor's expense, signal and communication cables and conduits. In case of signal emergencies or highway-rail grade crossing problems, the contractor shall call SCRRA's 24-hour signal emergency number. If utilities cannot be located, potholing shall be done to locate the utilities. SCRRA and appropriate utility owners shall be notified immediately when utility lines not known or indicated on the drawings are encountered. No service shall be disrupted until the utility owner and SCRRA have determined the required action on such lines.

© Copyright 2009, SCRRA. All Rights Reserved

10.0 OPERATION AND MAINTENANCE

The design and operation of a highway-rail grade crossing requires the coordination of maintenance between the agency and SCRRA, as defined in the C&M Agreement. The complexity of this interaction increases when traffic signals and preemption are incorporated into the crossing design. In cases when the efficient operation of the traffic signals and other highway agency-controlled devices provide an important element in the overall safety of the crossing, the following procedures should be used.

10.1 HIGHWAY AGENCY INSPECTIONS

The highway agency shall independently inspect the preempted traffic signals intersection a minimum of every three (3) months, and shall report the results of this inspection to SCRRA. A general review of the highway intersection and highway-rail grade crossing for proper signing, pavement marking, sight distances, vegetation, visibility and changes in conditions should be made. Independent inspection and testing should include at least the following:

- Ensure the timing design parameters are recorded
- Simulate the preemption signal input from the highway-rail grade crossing warning system while confirming the railroad interconnect is connected to the highest priority control unit input
- Confirm preemption activation of traffic signals, including any associated pre-signals or active signs, and confirm that the devices are operating as designed
- Confirm that the standby battery power operates as designed
- Ensure all warning labels are clearly visible and legible
- Ensure all advance warning signals and signs are clearly visible, and that any trimming of vegetation or trees is done as necessary

10.2 JOINT INSPECTIONS

Highway-rail grade crossings with preempted traffic signals shall be jointly inspected on a semi-annual basis. SCRRA shall be contacted prior to each inspection to coordinate and schedule the work, and SCRRA's representative shall be present during each inspection. The inspection should be conducted while a train passes through the crossing, if possible. During joint inspections, a general review of the highway intersection and highway-rail grade crossing for proper signing, pavement marking, sight distances, and changes in conditions, should be made. Joint inspection and testing should include at least the following:

- Confirm timing design parameters, including maximum preemption time and gate lowering times
- Confirm interconnection circuit wires are free of grounds or foreign currents, and that the system fails in a safe mode
- Confirm the preemption signal from SCRRA is connected to the highest priority preemption input
- Identify whether special features are included, and functioning as designed
- Activate the highway-rail grade crossing warning system and confirm that preemption activation of traffic signals responds during all phases of the traffic controller unit

© Copyright 2009, SCRRA. All Rights Reserved

- Confirm that the pedestrian clear-out time matches the design timing
- Record the joint inspection and test date, as well as the next due date

10.3 HIGHWAY-RAIL GRADE CROSSING CONDITION CHANGES

Any changes to railroad or highway traffic conditions discovered during routine inspection and tests shall be reported to each party. The relevance of these observed changes may trigger an engineering safety evaluation of the site. The following are examples of reportable changes at the preempted site:

- Changes to railroad operation or speed
- Changes to vehicle traffic or speed
- Changes to the preemption or related signal settings
- Spotting of vehicles queuing onto the highway-rail grade crossing area
- Vehicles having difficulty stopping safely when a train approaches and activates the warning system

Subject: Proposed Shadowbox Studios Project (Master Case 21-109)

Dear Santa Clarita Planning Commission,

I am writing to you today to urge you to reconsider the enormity of the proposed Shadowbox Studios. This project, at its present proposed size does not fit into our mostly residential community. Here are a few of my thoughts:

- The size and quantity of buildings is too much. Buildings fifty-five feet tall in an area that doesn't have any buildings even close in height is out of place. Please do not allow this! Twenty five to thirty feet in height should be the maximum.
- Traffic. Why should all traffic funnel to only the South of this huge project. Seems like there should be another exit to the north along the Metropolitan Water District Right-of-Way. When the Bermite property is developed in the future, Via Princessa and Wiley Canyon Rd. will connect with Highway 14 which would help with freeway access heading northeast towards Palmdale. Also, any traffic heading north or northwest via Railroad Ave. would benefit from that access as well. If the 13th street crossing was blocked by a train, access could be obtained using the same egress.
- Hours of operation. Having large trucks moving around and parking all hours of the night along the backside of Alderbrook is not fair to those people that reside along that street. Workers typically are not quite and it would be a shame if the hours of operations isn't addressed.
- The majority, not all, but the majority of people that spoke in favor of this project were people from out of the area and businesses that will profit from this project. The majority of residence in the canyon that I have spoken to are not totally against the project, they are just against the size of it as well as the traffic.

I really hope the City of Santa Clarita will do the right thing and downscale this project or move it to an industrial location.

Sincerely,
Robert Kennedy, Jr.

Subject: Proposed Shadowbox Studios Project (Master Case 21-109)

Dear Santa Clarita Planning Commission,

I am writing to you today to urge you to reconsider the enormity of the proposed Shadowbox Studios. This project, at its present proposed size does not fit into our mostly rural/residential community. Here are a few of my thoughts:

- **The size and quantity of buildings is too much**. Buildings fifty-five feet tall in a residential area that doesn't have any buildings even close in height is out of place.
- **Traffic**. This also is too much for a rural/residential neighborhood. With The Master's University, three churches, and four hundred residential houses in the rural/residential neighborhood this seems like a traffic problem right from the start. Also Dockweiler was not constructed to accommodate large trucks and trailers and doesn't have a straight shot to the freeway so again another traffic problem on Sierra Highway. Is the city going to build a parking structure for all the cars that park on Dockweiler?
- **Hours of operation**. Again this is mostly a rural/residential neighborhood. Having large trucks moving around and parking all hours of the night along the backside of Alderbrook is not fair to those people that reside along that street. We have already experienced Melody Ranch and their moving trucks and trailers at all hours of the night in a residential neighborhood. Being in the construction industry we have working hours that we have to comply with. Don't see that in the movie industry.
  Please think about the resident in Placerita Cyn & the people on Dockweiler.
- **The majority of residence** in the canyon that I have spoken to are not totally against the project, they are just against **the size of it as well as the traffic**.

I really hope the City of Santa Clarita will do the right thing and downscale this project or move it to an industrial location.

Sincerely,
Barbara Kennedy

Subject: Shadowbox Studios

I had planned on writing to you today anyway. Funny, this is exactly what I was writing to you about. Today while trying to leave my home for an appointment, the rail crossing was malfunctioning and stuck in the down position. Traffic was backed up almost to masters college I'm told. With no other choice, cars began going around the crossing gates. Regardless of the planned road expansion, having one exit from the Placerita canyon with the addition of Shadowbox studios prior to the Dockweiler extension seems ludicrous.

I personally am in favor of the project, I realize the economic benefits, however without an additional exit from the studio property I would ask you to reduce the size of the proposed project. A private rail crossing at 15th St, would provide an easy exit for studio vehicles without causing potential gridlock.

Our neighborhood is obviously significantly impacted by this development. No longer will we be welcomed home by the sight of open land and rolling hills, but rather large structures and parking lots. In exchange I propose that the 4-5 billboards along railroad Ave between Lyons and 13th are purchased and taken down. I never understood how the city could spend so much on the beautiful library building, only to have a view of a Big Mac billboard right across from it.

I am interested to hear your reply as quite honestly I'm not sure the planning commission really cares about how we feel. I'm hoping we can reach an agreement especially on the ingress and egress issue and work together with Shadowbox to develop something we can all live with
Sincerely,
Tracey Bruckner

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

Planning Commissioners,

Please ask the developer to change the plan to save the heritage oak and other oaks on this property. I know that we are all trying to preserve the character of Old Towne Newhall. The heritage oak can never be replaced. We are a proud tree city and the oaks are the longest growing tree in our community. Please preserve them in this development and other developments proposed in the future.

King regards,

Karen Towles

Subject:	Master case 21-109 City of Santa Clarita Planning Commission for the Hearing on Shadowbox studio project.
Date:	Thursday, April 6, 2023 11:56:10 PM

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

Dear Ms.Iverson:

My name is Joe Morelli. I'm a resident here in Placerita Canyon.
I have a questions and concerns for the city about this project.

Jeff Weber purchased this property but did not do his due diligence. On December 10th, 2020 there was a One-Stop 20-016 requesting proposal for a movie studio facility. Which the city found many key issues wrong with the project. That require a General Plan Amendment along with General Plan and Zoning Ordinance Amendments and Minor Use Permits and other things.

The project doesn't fit the Placerita Canyon Special Standards District to protect, maintain and preserve and enhance and secluded, historical rural equestrian character of a community. Additionally, it is the purpose of these special standards to ensure that new and expanding structures are compatible with a characteristics of surrounding single-family residential neighborhood....
per section 17.39.020(A)

These are just some of the cities key issues with the project and why it's wrong with this sight that the City pointed out.

Also with Mixed Use guide per the City to preserve the character of existing neighborhood and protected from adverse impacts to the residents. So how does this project improve Placerita Canyon historic rural equestrian community.... It does not..

There's no 55 foot tall building's in the whole Newhall area and definitely not 20 of them on 65 usable acres. Parking for almost 3000 and 257 trailers.
There's not a dozen 55 ft tall buildings in the whole of Santa Clarita. So why does Placerita Canyon need 20 of them all in one small area.
This project is larger than a Santa Clarita Mall in both size and height. At least the mall has four major streets and multiple exits all around it.

Again, Jeff Weber did not do his due diligence when he purchased the property and is now trying to make it fit into this area after the City has already told him it doesn't belong here.

So I'm asking the City of Santa Clarita Planning Commission not to make General Plan Amendments, Zoning Changes and Minor Use Permits to make this project fit our area.

This project doesn't belong here and that's it. So why make it fit.... For the better of who the residents or just money.

I'm all for jobs and there's a better place for this project and size. The Whitaker-Bermite property Golden Valley and Centerpointe all concrete tilt-ups and no residential around.

Golden Valley 4 Lane major road straight shot to the 14 highway.
Not a D rated crossing at 13th street and Railroad.The traffic study is a D rating before and is a D rating after the project. So where's their any improvements a D is a D but with new shiny lights. Infact 4 traffic lights in a 1/4 mile. How does traffic lights fit into Placerita Canyon community or standards... not at all.

Please don't make this project fit Placerita Canyon by rezoning and planning changes.

Thanks, Joe Morelli born and raised here in the SCV and a resident of Placerita Canyon that is going to be affected by this project.

I remember as a child going to Tumble In getting a root beer slushy then going to the summer carnival that would be in the open space and seeing the cows in the dairy down the road... many many years ago...

RE: Planning Commission Hearing on Shadowbox Studios Project
MASTER CASE NO.: 21-109

Dear Ms. Iverson:

As you know, this office represents the Placerita Canyon Property Owners Association ("PCPOA"). Enclosed with this letter are two previous letters that we have sent to the City concerning the Shadowbox (formerly, Blackhall) project.

Those letters outlined many of the concerns PCPOA has regarding Shadowbox. Placerita Canyon is a quiet, residential community governed by a Special Standards District. The purpose of this Special Standards District is outlined in the Municipal Code.

Adopted in June 2013, Santa Clarita Municipal Code section 17.39.020 states, "The purpose of the Placerita Canyon special standards district (PCSSD) is to protect, maintain, preserve and enhance the secluded, rural equestrian character of the community, to enhance the community's unique appeal and to help mitigate the cumulative impacts of residential development. Additionally, it is the purpose of these special standards to ensure that new and expanded structures are compatible with the characteristics of surrounding single-family residential neighborhoods, and protect the light, air, and privacy of existing single-family residences from negative impacts. These standards are also intended to ensure reasonable access to public riding and hiking trails, and to minimize the need for installation of infrastructure such as sewers, street lights, concrete sidewalks and concrete flood control systems that would alter the community's character, while providing for adequate drainage and other community safety features."

Since Shadowbox has opted to place its development in a neighborhood with these unique characteristics, it should have anticipated its proposal must satisfy these guidelines. PCPOA's prior correspondence with the City details how it appears that Shadowbox fails to accomplish this.

The letters also discuss areas of concern outside of the PCSSD, with traffic being a major issue.

PCPOA is concerned about this Project because 1) it fails to meet PCSSD standards; 2) it requires many changes to both the Placerita neighborhood as well as the City itself in needing a General Plan Amendment and a Zone Change (If the Shadowbox project was acceptable for this area, then why does it need the numerous changes to make it fit?); 3) it changes physical aspects of Placerita as it needs permissions to both alter the ridgeline as well as develop surrounding hillsides; and 4) it appears to run counter to other already existing, funded, and approved projects, such as the extension of Dockweiler.

The Dockweiler extension is moving forward. Representatives from the City are meeting with residents and business owners who will be impacted by the extension to, among other things, work out an agreement with those people about compensation for the losses they will suffer under that project. Part of those discussions has been the planned Traffic Circle or Roundabout at the junction of 12th Street and the extended Dockweiler. However, the Shadowbox plan calls for traffic signals (and not a roundabout) at this location. This is one example of how Shadowbox runs counter to Dockweiler. We request the City to do a side-by-side comparison of Shadowbox and Dockweiler. Whatever differences are found should be explained and analyzed. Dockweiler is going forward based on certain assumptions and goals to be achieved. How do the changes Shadowbox requests impact those assumptions and goals? Are some of the goals frustrated by Shadowbox's own traffic design? If they are, then the plan for Dockweiler needs to be re-examined.

Standing alone, the City approved the Dockweiler extension to improve traffic and address safety issues. Is Shadowbox in compliance with those goals? These are issues that should be addressed.

Once the draft EIR has been reviewed, PCPOA will have additional comments and concerns. In concept, PCPOA is not opposed to a movie studio in Placerita Canyon so long as its impact to the existing community is minimal, and the project adheres to the Standards adopted ten years ago. As it stands now, based on the project presented last year, Shadowbox does not meet these requirements.

Sincerely,

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

Ms Iverson, I want to voice my concerns over this project. I've been here since 1955 and we've seen a lot of changes.But this has to be one of the worst and to think the city would like us to believe this wouldn't have any or very little affect on not just the residents of Placertia Cyn but all that drive thur Newhall Ave.I take it the city not aware of how bad traffic is and let alone when we have accidents or more Big trucks added to the mixed. How is it the city spent millions to fight cemex because it was harmful and bad for the community but to allow this large individual complex with 19, 55ft high buildings that doesn't fit into the Placerita canyon residential area there's no 55ft tall buildings in Newhall so why start now. This project doesn't fit into the special standards of Placerita cyn.
Don't rezone and change planning to make this fit here. It doesn't belong in the our community.

Thanks Frances Zamora

Subject:	Development of Shadowbox Studios Project will HARM the character and quality of our Placerita Canyon Neighborhood
Date:	Friday, April 7, 2023 9:31:44 PM

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

To Whom it May Concern:

Placerita Canyon is an historic neighborhood, a hold out of open space, majestic oak trees, and the friendly blend of diverse human elements; uncrowded ranch style homes, mix of high and low income families, the respectful Melody Ranch studios, and a private college campus that beautifully reflects the rustic country style of our canyon. Despite the diversity, there is a shared taste for remote habitat away from the busy-noisy city scene and a mutual respect for personal privacy. There's a price paid to live in Placerita Canyon, although paying the same property tax as other neighborhoods, Placerita Canyon does not receive the same city services. Its worth it, though, to live amongst natural beauty, enjoy space between oneself and your neighbors, breathe fresh air, and to rest in the quiet nights.

The project to build a film and TV studio campus on 93 acres adjacent to the Placerita neighborhood threatens the character of the community and the value of its property and homes. The traffic will pollute the air, pierce the quiet with the drone cars, and impose busy streets impeding entry and exit from the canyon. The studios will bring employees and clientele into the canyon who do not share the community character nor inclined to respect it. The natural terrain of the open space buffering the neighborhood from railroad with its beautiful oak trees, will be replaced by ugly, industrial box type buildings.

Our home is a stones throw from the property where these studios will be built. In addition to the lasting demise of the canyon beauty and quiet, we will have to endure months of building invasions on our daily lives; noise, dirt, extra traffic.

It doesn't seem fair. We bought this home, and paid a higher price for location, in order to enjoy the special ambiance of 'Placerita Canyon' living. I hope city representatives act to protect the unique character of the Placerita Canyon neighborhood, as well as preserve the property values of home owners.

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

Hello Ms. Iverson, I want to voice my concern over this project. The location is a very poor one I truly don't understand how one can say it won't have an effect. How can the city not be aware that Newhall Ave is two lanes that goes to 3 and back to 2 lanes than let's not forget when the buses are stopped its a problem now on top of the traffic from when the train is stopped at Market St .Now we want to add more lanes coming into 13st mixed with bid rigs and more vehicles and let us not forget the extra stop lights .It will be worst than Serria hwy and Via Princessa that is a poor design and can never be fixed. I don't understand how one buys a property that knows he is very limited to what he can do with it.Than wants the city to bend to what he would like to have. He was told up front it won't fit or work but here we are the city wanting to make it fit for one person at the expense of so many. The size of all the tall industry buildings doesn't fit into Placerita canyon residential community or within the special standards district.

Thank you Cathy Zamora

Newhall, CA 91321
(661) 414-6995
savino.ledesma101@gmail.com

27th April 2023

To whom it may concern,

My name is Savino Ledesma and I have been a homeowner on Alderbrook Drive for over 12 years. I have lived in Santa Clarita for over 25 years. My wife and I have been able to grow our family and live comfortably in this area. I am writing this letter in concern of the Blackhall Studio Project possible construction.

This project is too big for this area. This is a neighborhood with small exits including the Placerita Canyon exit and 13th Street intersection. These exits will not accommodate residents' needs if the studio is created. It will cause more traffic. In case of emergency, residents, the students and faculty at Master's University will have a hard time evacuating which can put many people in danger. Finally, at times the railroad crossing goes through maintenance and malfunctions. When this happens traffic gets backed up and causes delays. The studio will cause even more traffic.

Construction will also ruin the wildlife that we have in this area. This area will destroy the habitats and displace the animals that live nearby. The proposal to use the Metropolitan Water District property along the south of Placerita Creek to provide vehicle and trailer parking spaces will also destroy the wildlife. This space should not be used for parking trailers or vehicles.

Sincerely,

Savino Ledesma

TO: Erika Iverson

Associate Planner at City of Santa Clarita

RE: Master Case 21-109 City of Santa Clarita Planning Commission for the

Hearing on Shadowbox studio project

Ms. Iverson,

I am writing to express my and my husband Russ's concern about this Shadowbox studio project. The location for this project is not zoned for the size and type of project.

There is no regard for the residents who are living in this rural neighborhood, the oak trees which will be removed, that are supposed to be protected, or the impact it will have on the flow of traffic in and out of the canyon which right now, at times, backs up on Newhall Avenue from the Highway 14 exit to the railroad crossing into the canyon. Traffic in the canyon will become so congested with the number of vehicles proposed for this site.

Why doesn't the city see the Negative impact this project will have on our rural way of living in Placerita Canyon?

How can someone who is not living in our area think they know what is best for our city and especially our neighborhood. The Shadowbox project has an apparent lack of concern for the welfare of our neighborhood, or the negative impact the Shadowbox project will have on our way of life.

Thank you for your time.

Russ and Sharon Melton

Re: Proposed Shadowbox Studio Project (Master Case 21-109)

Dear Santa Clarita City Council and Planning Commission,

My wife and I attended the City Council Meeting April 18, 2023 to learn more and to hear developer, public, and city comments concerning the proposed Newhall Shadowbox project. We listened objectively and observed what was proposed by the developer and after much consideration, we feel this project is out of place at its present proposed size for this location. Besides changing the fabric of the Placerita Canyon area we have multiple concerns that are outlined as follows:

- The number of workers and vehicle traffic for a studio at this location will overwhelm the ingress and egress to this location. We have over 400 homes, three churches, Masters University all located in Placerita Canyon. We understand the railroad crossing, 13th Street and Arch Streets will be widened and Dockweiler Dr. will extend from its present terminus and connect to Arch Street but it's not enough. The Dockweiler Road connection leads to Sierra Hwy but does not give any better access to the freeway. All of this around a residential area. Doesn't make sense.
- Studios run 24/7 which is a problem for residential areas. We presently experience that with Melody Ranch Studio that is located in Placerita Canyon right in the middle of

residences. Vehicles come and go at all hours of the day and night with their noisy trucks and trailers banging and making excessive noise along with the larger trucks using their Jake Brakes. The reality is the workers could care less about the residents and the owners of the studio do little, if anything to combat the problem. This is not fair or right for a residential neighborhood. Furthermore, filming is occasionally conducted in the middle of the night with gunshots and large lights that illuminate the surrounding homes and yards.

- The sheer size of the complex. Nineteen Sound Stages, fifty-five feet tall? Almost three thousand parking spaces, over two hundred and fifty trailer parking spaces? Office Building, Parking Structure, Catering Department. Wow, massive, especially in a residential area.
- We heard a few people referring to Santa Clarita being "Hollywood North". Have these people seen Hollywood lately? Is this something to strive to be? We think no. The crime, prostitution, drug use, etc., etc., is not anything we would like to see in our great "Awesome Town" city! The city council needs to take into consideration the long-term implications and legacy of the city and not revolve today's decision around the money aspect. Revenue is very important but shouldn't be the driver.

I have been a resident in Placerita Canyon since 1965 and my wife since 1974. We urge you to reconsider this project and do the right thing, either have it massively downsized or moved to a more appropriate location.

Thank you for your consideration.

Sincerely,

Robert L. Kennedy

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

Erika,

I am opposed to the development of the open field in Placerita Canyon. Shadow Box studios is trying to make an oversized project fit. I hope that the city does not allow Shadow Box to build 19 fifty five foot sound stages. I live near Melody Ranch and when they are filming the residents have to deal with the added traffic. The traffic and the equipment they use run all hours of the day.

An alarming concern is that we only have two entrances and exits in the canyon. In case of an emergency I do not see how the residents and students at Maters University could safely evacuate the canyon.

I hope that the city reviews this development closely and realizes that the Shadow Box development does not fit in the canyon nor within our special standards.

Thank you,

Isaac Zamora

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

Dear Planning Commission, Mayor and City Council:
I am opposed to cutting down oak trees in the Old Town Newhall area for development.
Trees are important to the environment, wildlife and to the community. They should be protected from development.
The proposed development should have to leave the trees alone.
It is not OK to keep cutting down many trees for never ending developments. There is a limit to removing trees for development, and we are at that limit now.
Please protect the 12 old growth oak trees at the planned development, including the heritage oak tree.

This project will change the character of Old Town Newhall in a negative way.
Please allow more time for review by extending the comment period to 120 days.
Please copy to all planning commissioners.

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

Erika, This is Kevin Ward a resident of Placerita Canyon for 30 years, I have worked and run a Motion Picture company for 40 years and I have submitted a prior comment. As I have stated before I am not against studios or progress but with my experience I felt this project was too big and now after attending the meeting on 4/18/23 I know it is and I am not for it.

I do not know where the city is expecting this non-stop flow of vehicles to go? This includes tractor trailers, crew cabs, craft trucks, lighting trucks, grip trucks, lumber trucks, paint trucks, personal vehicles and many more. Studios the size of which you are planning have many entrances for a reason.. this project has two and they are in a neighborhood. This area will be destroyed. You can't make a turn from 13th to Railroad now without being in a traffic backup.

Another issue with this project is the height of the buildings and size of the project. How can the city say this is not going to negatively impact our lives? you are building a city in a neighborhood.

The developer seems to make promises of employment as well as visiting local businesses for support. This is a four-wall rental Studio they have no control where production companies get their crews from and the developer has never visited anyone I know in this neighborhood to ask any opinion.

I appreciate the opportunity to express my concerns and I hope the city considers a much smaller project, one that works for all Santa Clarita residents

Thank you

Kevin Ward

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

Hello City planning commission,

I have concerns and comments that need to be addressed by the city planning department.

One of the very first things is they're no impact or physical divide to an established community and will not affect Placerita Canyon or the Special Standard District...

Then why are we rezoning.

My question is did the city zone this property incorrectly to begin with....I don't think so, it went through 2 city planning reviews over 36 years now without any zoning changes.

Why is the city even entertaining someone to come in and push their agenda on the residents and the city.

Also why does this area need to become a Job Overlay Zone and have 20-55feet tall industrial buildings. Over 3/4 of the project are individual buildings that are taller than 55 ft.

There are only five buildings in all of Santa Clarita that are above 49 ft tall as of right now and not one in Newhall.

So why does Placerita Canyon need 20 of them...we don't...

Why not leave it 35 feet tall... Like Needham ranch studios that are only a few years old now and in a large industrial park. That are not in or around an established rural residential community protected by the Special Standards District.

Once again Jeff Webber purchase the property but did not do his due diligence the One Stop MC20-016 and City already said the project doesn't fit and again, I don't understand how the city is going to allow someone to bully them around.

Jeff Webber makes statements that he is the new kid on the block and he wants to be helpful and listen to suggestions. Well I can tell you otherwise. I have many emails saying different. Every time you bring up something new or possible change it never works for him " not cost effective."

I understand that the city needs Jeff Webber's property to expand Dockweiler.

Is it my project or no Dockweiler easement for expansion....I don't know..

I would also like the city to review the scripted One Click Politics it is nothing more than a political campaign to manufacture support and be misleading.

Using a work address to establish residency is not only dishonest, but it's fraud. I would like the commissioners to consider that some of the one click politics, support forms falsely identifies signers "as residents of Placerita Canyon " when they are not residents at all. This is a blatant attempt to misleading.

All I'm asking the City not to rezone.

Thank you, An actual resident of Placerita Canyon. Joe Morelli

To whom it may concern,

Hi my name is Noemy and I live on Alderbrook Drive. The reason I am sending this email is because I do not want the approval of Shadowbox Studios. It will be right in my back alley and the structure will block all my view. Not to mention all the noise it will generate, I do not know if the Alderbrook residents know how big this project is because most of them do not attend the meetings. Or they do not want to oppose this project because Jeff said that he will look into the possibility to fix the Alderbrook road. I know that this is such a big project that will bring a lot of traffic. I would not mind if this project was created in a commercial area not near my residential area. I also hope that the Water Metropolitan does not approve the request to use the space for trailer parking because that will be 50 to 60 feet from my backyard.

Thank you, Noemy Ledesma

Subject: Opposition to Shadowbox Movie Studios Project in Placerita Canyon, Master Case 21-109

May 20, 2023

Ms. Erika Iverson, Senior Planner for Shadowbox Studios Project Draft EIR

City of Santa Clarita Planning Div.

23920 Valencia Blvd, Suite 302

Santa Clarita, CA 91355

VIA E-MAIL: eiverson@santa-clarita.com

Re: Opposition to Shadowbox Movie Studios Project in Placerita Canyon, Master Case 21-109

Dear Ms. Iverson:

My name is David Hong, and I live in Canyon Country.

This letter regards the zoning change proposal for Shadowbox Movie Studios Project in Placerita Canyon, Master Case 21-109. I oppose any zoning change at this site.

1. The Special Standards District for Placerita Canyon must be maintained.

From the City's ONE VISION ONE VALLEY EIR:
"Policy LU 1.2.6: In Placerita Canyon, ensure compatibility of development with existing rural, equestrian lots and the adjacent National Forest land; maintain community character in accordance with the City's Placerita Canyon Special Standards District (PCSSD); provide an orderly transition between existing rural and low-density residential uses and proposed new development; and require the provision of needed infrastructure. The City and the Placerita Canyon Property Owners Association shall work together to amend the PCSSD in the Unified Development Code to provide additional certainty and expectations for the developed areas within the District and to create flexibility and continuity, subject to the provisions outlined above, for undeveloped properties in the District. These changes will include transitional density provisions, specific Unified Development Code (UDC) rules and regulations that will clearly outline development codes within Placerita Canyon.

Policy C 2.6.1: Require that new development construct transportation improvements or provide its fair share of the cost of transportation such improvements and ensure that required improvements or in-lieu contributions are in place to support the development prior to occupancy.

Sand Canyon The Sand Canyon area is generally located within the City of Santa Clarita, southeast of Canyon Country and is comprised predominantly of low-density single-family residential uses. The area is rural with extensive stands of oak trees and is characterized by large estate homes and lots, many of which are equestrian and enjoy direct access to an equestrian trail system linking the community. The community is accessible via Sand Canyon Road and Placerita Canyon Road and is bordered on the south and east by the Angeles National Forest. Sand Canyon is largely developed. A challenge for the Sand Canyon area will be ensuring land use compatibility between homes and adjacent natural areas in Angeles National Forest and along the Santa Clara River. Major planning issues include protecting the rural and equestrian character from development pressures to create more traditional subdivisions in this low-density area; increasing multiple purpose trail linkages; and providing an effective interface between residents and National Forest lands. In addition, development in the area must comply with the City's Special Standards District to maintain the rural community character desired by residents."

2. The equestrian nature of the community and beautiful scenery must not be changed with this type of development.

3. There are serious wildfire threats and the evacuation challenges that Placerita and Sand Canyon face every year.

If this proposed zoning change allows over 3000 people working at the proposed studios, this will lead to a disaster that we cannot allow.

There are many other locations in our city that can better house production studios for 3000+ people.

Very truly yours,

/s/ - David Hong, Esq.

Re: Opposition to Shadowbox Movie Studios Project in Placerita Canyon, Master Case 21-109

Dear Ms. Iverson:

As a long-time resident of Canyon Country, I oppose the Shadowbox Movie Studios Project in Placerita Canyon, Master Case 21-109, as proposed by the developers, including the proposed zoning change and removal of large oak trees, among other issues.

I also request a time extension for public comments on the EIR as this is a very large and complex project, and the EIR was released during the Spring holiday season, with limited public awareness, which will unreasonably restrict the public input on the EIR for such an impactful project.

My objections to this project include the following:

The Project directly and significantly conflicts with the Placerita Canyon Special Standards District purpose as stated in the City code: "The purpose of the Placerita Canyon special standards district (PCSSD) is to protect, maintain, preserve and enhance the secluded, rural equestrian character of the community, to enhance the community's unique appeal and to help mitigate the cumulative impacts of residential development."

This project is a large, dense commercial development which is not compatible with the rural equestrian character of Placerita Canyon.

The proposed size of the project also will endanger the lives of Placerita Canyon residents, and those working at the studios, in the event of any wildfire that threatens this area because there is only one way for vehicles to get out of Placerita Canyon, which exit is already too limited to quickly evacuate the existing residents in an emergency. Adding 3000 studio workers would be catastrophic in a wildfire which are unfortunately too common in Santa Clarita.

The project must be substantially downsized to be less conflicting with the character of the surrounding community. The developer should be required redesign the project to preserve the ridgeline in compliance with the City's ridgeline ordinance, lower the heights of the buildings to no more than 2-3 stories to maintain the character of the community, and preserve and protect the mature oak trees on the site.

Sun,21 May 2023 23:43:28

The developer should also be required to develop an alternative emergency exit route from the project site for evacuation of studio workers in the event of wildfire or other emergencies, so that they do not add to the number of residents trying to evacuate using the current exit route during an evacuation.

The above changes are a reasonable concession for the developer in exchange for entitlements for the downsized project in such a desirable area. If the developer cannot manage to revise the project to meet these requirements, they should find another area in which to build this large, dense commercial project.

Sincerely,

Susan M. Carey

Shadowbox Studio Master Case 21-109 Public Comment

Dear City Council members and Planning Commission,

As 39 year residents of Santa Clarita Valley and 27 year residents of Placerita Canyon,

I've been happy to see our city grow and protect our neighborhoods and environment.

But we are writing you today about the Shadowbox Studio project.

The property along Railroad and 13th Street has been vacant and undeveloped for a long time.

The proposal for the Shadowbox Studio strikes us as too large and with too much impact.

The intersection of 13th and Railroad is now often overcrowded with residential and Master's College traffic. Adding another 1,000 cars and trucks for the studio will overwhelm that vital intersection of our canyon.

The plans as they are now presented by Shadowbox force all of those activities close to the intersection of Railroad and 13th. No planning on infrastructure for any additional access points on the back of the property or along Railroad are planned. The city never finished the extension of Dockweiler, but that does not fully address any emergency evacuation plan.

The proposal for Shadowbox takes care of the simple needs of the studio without considering what would happen in an emergency in our canyon.

We are not against people trying to operate a business in the Santa Clarita Valley but this feels too large without infrastructure investment. Why this property was zoned commercial so close to residential remains a mystery but an active studio with the scale and size proposed seems overwhelming.

So we ask you to reject and amend the Shadowbox proposal until a better road and infrastructure is in place.

Dinah Sargeant and Nick Lombardo 22019 Brei Ct, Newhall, CA

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

Erika,

My name is Kevin Ward I have been a resident of Placerita Canyon for 30 years,I have worked and run a motion picture business for 40 years and I have commented previously on this issue.

After the meeting on 4/16/23 I am 100% against this project.

A few of my main concerns and how it will negatively impact life here have been over traffic and trucks, the 55 ft tall buildings and how this will affect life for the one or two years they are building this?

The developer and his so-called paid for traffic advisor showed a 13th Street and Railroad traffic simulation, when was this done? I am very familiar with the traffic at this intersection from 6 to 10 every morning and from 3 to 7 every afternoon and there are cars everywhere, not to mention if someone is doing a U-turn or a train is coming, cars are backed up, why did he not show that? Or where are the 15 to 20 tractor trailers backed up with the 20 to 30 5 ton trucks and all the other craft trucks trying to get into the studio at 6 in the morning? why did he not show that? This simulation was completely untrue from reality here.

Regarding the Dockweiler connection and all the traffic that it is going to redirect off Railroad. Why did the paid for professional not mention that Dockweiler goes through apartment complexes and condominiums? and there's no parking or room on the road already? or that Dockweiler ends at Sierra Highway where car will go right back to Railroad?, once again completely untrue from reality here.

And regarding the 55 tall buildings. The developer compares himself to Master's College or Melody Ranch, completely untrue, both of those facilities fit into the Placerita Canyon landscape very nicely, this developer claims that his 20 or 30 55 tall buildings are not going to impact anybody, how can the city allow this eyesore? Why would the city negatively affect so many people by doing this?

I understand the developer has been going around to businesses promising money and promising jobs to get support, when the fact is this developer cannot promise anything. He cannot promise that any production companies are going to buy anything from here or hire people here and thier is a good reason why he's not talking to residents here, he knows it's going to be a complete disaster.

Why is the developer not giving money to the residents that have to live next to this? Or have to put up with this while it's being built?

This project is no fit for a very congested Newhall area already

Thank you

Kevin Ward

Subject: Re: Master Case 21-109

I'm not In favor of this project as it will interfere with business. As I understand we will be losing our parking and traffic in front will be worse .Placerita is a special standard district so why would the city planning even consider this or even be ask to think about rezoning the area?? hurting the small bussiness that are right here.This would workout just not in the center of town affecting so many with the traffic this will bring. Adria Adams

On Fri, Apr 7, 2023, 6:07 PM cathy zamora <czamora433@gmail.com> wrote:

> Hello Ms. Iverson, I want to voice my concern over this project. The location is a very poor one I truly don't understand how one can say it won't have an effect. How can the city not be aware that Newhall Ave is two lanes that goes to 3 and back to 2 lanes than let's not forget when the buses are stopped its a problem now on top of the traffic from when the train is stopped at Market St .Now we want to add more lanes coming into 13st mixed with bid rigs and more vehicles and let us not forget the extra stop lights .It will be worst than Serria hwy and Via Princessa that is a poor design and can never be fixed. I don't understand how one buys a property that knows he is very limited to what he can do with it.Than wants the city to bend to what he would like to have. He was told up front it won't fit or work but here we are the city wanting to make it fit for one person at the expense of so many. The size of all the tall industry buildings doesn't fit into Placerita canyon residential community or within the special standards district.

Subject: Shadowbox Studios - EIR Comment

Dear Santa Clarita Planning Commission,

I am writing to inquire about draft EIR for Shadowbox Studios development. I am concerned about the increase in traffic at the 13th Street crossing, as well as increased traffic through the Placerita Canyon and through the Sierra Highway Gate.

You see, my property is located at 21005 Placerita Canyon Road, on which the entirety of the Sierra Highway Gate is located. As opposed to other homeowners within the "Canyon," my property extends across the street to the property across the street, such that ALL traffic heading out to Sierra Highway not only passes by my property, but through it.

Take today, as an example, where the 13th Street crossing was impassable. The sheriffs directed people to exit through the Sierra Highway Gate, leading to a long line of cars blocking my safe ingress and egress to my property. This is unacceptable! This is not the first time this has happened. Both the approval for the Shadowbox studios (which I do not oppose, subject to my herein concerns being addressed and adopted) and the Dockweiler extension have the same unresolved issue… the 13th Street at grade crossing.

There is a workable solution that is good and fair to all concerned. Along with other studies, there MUST be a study to incorporate into both plans a crossing for traffic that is below the 13th Street railroad tracks crossing. This can be done by keeping the tracks at their current grade and having traffic move below the tracks. Alternatively, there is a hybrid situation, where the tracks are partially elevated (limited by their proximity to the station) and the traffic flows under the tracks. Of course, the distance between the tracks and the road must accommodate the tallest bus or tractor trailer.

In conducting the necessary studies and implementing this plan, the concerns of all stakeholders (PCPOA residents, Metro, Shadowbox, City Council, LACSD, and LACFD) can be taken care of, because a safe and unimpeded second egress and ingress from and through the Canyon will be realized through the modified 13th Street crossing. It may cost more, but the investment in a long-term safety solution during fires and an inevitable earthquake, combined with traffic from Shadowbox and Dockweiler, will be met.

Thank you in advance and best regards,

Louis J. Esbin

Re: Support the Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

As a member of the film industry in the Santa Clarita Valley, I am pleased to support the proposed Shadowbox Studios project. It's no secret that Hollywood is the entertainment capital of the world. And Santa Clarita, located just 25 miles to its north, has played a starring role in the entertainment industry as Hollywood's backlot. The town's natural landscapes and varied cityscapes have long provided a versatile backdrop for filmmakers. The past several decades has also seen the addition of dozens of certified soundstages, and the migration of countless film industry professionals to the SCV. Therefore, once simply a home to historic movie ranches, these modern soundstages and thousands of film industry residents have established Santa Clarita as a leading venue for film and television production. In 2022, the City of Santa Clarita generated an estimated $38.5 million in economic impact to the local community from filming. Many factors have contributed to the continued success and appeal of filming in Santa Clarita, including the City's Film Incentive Program, Movie Ranch Overlay Zone, low-cost permit fees and expedited permit processing, along with the California Film and Television Tax Credit Program. Shadowbox Studios will only compliment the already existing filming features Santa Clarita hosts. The film community here works as a family. As one studio is at capacity, they are quick to recommend a neighboring studio, based on what the production is looking for. The existing filming community welcomes Shadowbox Studios with open arms. Their studio project will bring in what our current infrastructures have less of. I urge the Planning Commission to recommend approval for this project and allow us to work locally in an industry that is proud to call Santa Clarita home.

Sincerely,
Jason Altman

Re: I Support the Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

As a resident of Placerita Canyon, and a direct neighbor to the proposed Shadowbox Studios project, I am writing to express my support for this project. Throughout the process, the developer has worked side-by-side with our community to ensure our thoughts, comments and questions are heard. Further, it has been great to see some of our ideas implemented in the project throughout the past couple of years. As you have seen from the renderings, our Placerita Canyon Community Characteristics have been incorporated in the project. The stages feature an equestrian aesthetic that honors our lifestyle. I want to see this lifestyle protected and to continue, and that is what Shadowbox Studios has promised to do. I recognize that development on this property will occur at some point. I don't think we want to see thousands of houses or apartments here. That would be a real traffic nightmare. This project is the next best option for our community. Moreover, I applaud the efforts from the developer on working with the City towards a trail extension and access from Placerita to downtown Newhall and Metrolink. The enhancement would be of great significance for our community. Santa Clarita is Hollywood North, and we have an abundance of talented people who work in the film industry living right here in our city. How great it would be for these people to be able to regularly work close to their homes and maybe even walk or ride their bikes to the studio. The Planning Commission must see this is the best possible project for our community and the City. You must recommend approval for the project and allow it to move on to the next step.

Sincerely,
Mr. Chris Crase

Re: SUPPORT - Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

I am writing to show my utmost support for the Shadowbox Studios project. As a resident of Santa Clarita, this much-need project will elevate our City and build upon its reputation for a live, work, and play city for its residents. It's no secret that Santa Clarita has built the reputation of Hollywood north. Just last year, our City saw an increase in location filming, which generated an estimated $38.5 million in economic impact to the local community. Filming here benefits our local economy. Productions spend several millions of dollars on rentals and goods from businesses, homeowners, and nonprofits. Our local hotels, restaurants, attractions, and shopping centers receive direct compensation and generate tax revenue that helps fund roads, programs, recreation, and public safety for Santa Clarita. Queue in Shadowbox Studios. This studio will meet the growing need for studio space, not just in our City, but in Los Angeles County. Further, as demand for studio space in the SCV continues to grow, Shadowbox Studios is committed to partnering with the local film industry to buttress the film footprint in Santa Clarita. I am pleased to say the studio promises to build on the community's stout filmmaking heritage. For our local economy, the proposed project is estimated to generate over 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. Also, it is slated to have over $1 billion in annual economic impact. Indeed, as Shadowbox Studios Santa Clarita builds on the century-long legacy of SCV film production, the objective would be to help make Santa Clarita a first option for the film content creators. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction.

Sincerely,

Re: SUPPORT - Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

I am writing to show my utmost support for the Shadowbox Studios project. As a resident of Santa Clarita, this much-need project will elevate our City and build upon its reputation for a live, work, and play city for its residents. It's no secret that Santa Clarita has built the reputation of Hollywood north. Just last year, our City saw an increase in location filming, which generated an estimated $38.5 million in economic impact to the local community. Filming here benefits our local economy. Productions spend several millions of dollars on rentals and goods from businesses, homeowners, and nonprofits. Our local hotels, restaurants, attractions, and shopping centers receive direct compensation and generate tax revenue that helps fund roads, programs, recreation, and public safety for Santa Clarita. Queue in Shadowbox Studios. This studio will meet the growing need for studio space, not just in our City, but in Los Angeles County. Further, as demand for studio space in the SCV continues to grow, Shadowbox Studios is committed to partnering with the local film industry to buttress the film footprint in Santa Clarita. I am pleased to say the studio promises to build on the community's stout filmmaking heritage. For our local economy, the proposed project is estimated to generate over 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. Also, it is slated to have over $1 billion in annual economic impact. Indeed, as Shadowbox Studios Santa Clarita builds on the century-long legacy of SCV film production, the objective would be to help make Santa Clarita a first option for the film content creators. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction.

Sincerely,
Mr. Troy Hooper

Re: I Support the Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

As a resident of Placerita Canyon, and a direct neighbor to the proposed Shadowbox Studios project, I am writing to express my support for this project. Throughout the process, the developer has worked side-by-side with our community to ensure our thoughts, comments and questions are heard. Further, it has been great to see some of our ideas implemented in the project throughout the past couple of years. As you have seen from the renderings, our Placerita Canyon Community Characteristics have been incorporated in the project. The stages feature an equestrian aesthetic that honors our lifestyle. I want to see this lifestyle protected and to continue, and that is what Shadowbox Studios has promised to do. I recognize that development on this property will occur at some point. I don't think we want to see thousands of houses or apartments here. That would be a real traffic nightmare. This project is the next best option for our community. Moreover, I applaud the efforts from the developer on working with the City towards a trail extension and access from Placerita to downtown Newhall and Metrolink. The enhancement would be of great significance for our community. Santa Clarita is Hollywood North, and we have an abundance of talented people who work in the film industry living right here in our city. How great it would be for these people to be able to regularly work close to their homes and maybe even walk or ride their bikes to the studio. The Planning Commission must see this is the best possible project for our community and the City. You must recommend approval for the project and allow it to move on to the next step.

Sincerely,
Mrs. Martha garcia

For our local economy, the proposed project is estimated to generate over 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. Also, it is slated to have over $1 billion in annual economic impact. Indeed, as Shadowbox Studios Santa Clarita builds on the century-long legacy of SCV film production, the objective would be to help make Santa Clarita a first option for the film content creators. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction. Sincerely, David Bossert

Re: SUPPORT - Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

I am writing to show my utmost support for the Shadowbox Studios project. As a resident of Santa Clarita, this much-need project will elevate our City and build upon its reputation for a live, work, and play city for its residents. It's no secret that Santa Clarita has built the reputation of Hollywood north. Just last year, our City saw an increase in location filming, which generated an estimated $38.5 million in economic impact to the local community. Filming here benefits our local economy. Productions spend several millions of dollars on rentals and goods from businesses, homeowners, and nonprofits. Our local hotels, restaurants, attractions, and shopping centers receive direct compensation and generate tax revenue that helps fund roads, programs, recreation, and public safety for Santa Clarita. Queue in Shadowbox Studios. This studio will meet the growing need for studio space, not just in our City, but in Los Angeles County. Further, as demand for studio space in the SCV continues to grow, Shadowbox Studios is committed to partnering with the local film industry to buttress the film footprint in Santa Clarita. I am pleased to say the studio promises to build on the community's stout filmmaking heritage. For our local economy, the proposed project is estimated to generate over 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. Also, it is slated to have over $1 billion in annual economic impact. Indeed, as Shadowbox Studios Santa Clarita builds on the century-long legacy of SCV film production, the objective would be to help make Santa Clarita a first option for the film content creators. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction.

Re: Support Shadowbox Studios

Ms. Erika Iverson - City Planner,

As a resident of Newhall/Valencia, and a neighbor to the proposed Shadowbox Studios project, I am writing to express my support for this project. Shadowbox Studios will join the filmmaking legacy in Santa Clarita and improve the City's jobs and housing balance by creating high-quality jobs. The project will benefit our Newhall community with: • A secure studio campus with 24-hour security and monitoring. • One point of contact for our neighbors for easy communications. • Studio entrance designed to efficiently move traffic in and out of the campus. • Trail extension/access from Placerita to downtown Newhall and Metrolink. Further, the buildings are designed with an architectural sensibility that respects the community characteristics of both the local residential neighborhood and downtown Newhall. The Railroad Avenue frontage pays homage to the urban, mixed-use aesthetic of Main Street Newhall. As local residents, we walk to downtown Newhall regularly and support those local businesses and the Newhall Farmers Market. Having had the chance to look at the Shadowbox Studios plan, I think it will be a very welcomed addition to our neighborhood and the City. Santa Clarita is Hollywood North, and we have an abundance of talented people who work in the film industry living right here in our city. How great it would be for these people to be able to regularly work close to their homes and maybe even walk or ride their bikes to the studio. The Planning Commission must recommend approval of this project and allow for the City Council to vote on its approval, so we are able to break ground. This project is the best and most viable option to go into that location. We must not let a great opportunity pass us by. Please recommend approval of this project.

Sincerely,
Brian Schlick

Re: SUPPORT - Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

I support the Shadowbox Studios project. I am a 45-year resident and have watched the industry grow in Santa Clarita. Production is a great fit for our community. I know that the existing studios see newcomers not as competition, but as a way to burnish the City's already great reputation as place to film. I live in Happy Valley and experience filming frequently. I find the crews friendly and concerned about disrupting neighborhoods as little as possible. I have spoken with Shadowbox's Jeff Webber and was impressed for their plans for the space they have chosen to develop. I believe, like the other local studios, they will active participants in many facets of Santa Clarita life and welcome their project. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction.

Sincerely,

Re: Approve Shadowbox Studios Project Now

Ms. Erika Iverson - City Planner,

Dear Planning Commissioners: What has taken so long to get the Shadowbox project moving? 4000 high paying jobs and massive economic impact is escaping our city month after month. All the restaurants on Main Street could have doubled their sales each month this project sits. Why wait one more day? As a resident of Circle J Ranch Estates and a direct neighbor to the proposed Shadowbox Studios project, I am writing to express my complete support for this project. Throughout the process, the developer has worked side-by-side with our community to ensure our thoughts, comments and questions are heard. Further, it has been great to see some of our ideas implemented in the project throughout the past couple of years. As you have seen from the renderings, Community Characteristics have been incorporated in the project. The stages feature an equestrian aesthetic that honors our lifestyle. I want to see this lifestyle protected and to continue, and that is what Shadowbox Studios has promised to do. I recognize that development on this property will occur at some point. I don't think we want to see thousands of houses or apartments here. That would be a real traffic nightmare. This project is the next best option for our community. The Planning Commission must see this is the best possible project for our community and the City. You must recommend approval for the project and allow it to move on to the next step. Please do.not sit on this more day. Denise Lite 21649 Parvin Drive Santa Clarita 91350 818-522-6482

Re: Support the Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

As a member of the film industry in the Santa Clarita Valley, I am pleased to support the proposed Shadowbox Studios project. It's no secret that Hollywood is the entertainment capital of the world. And Santa Clarita, located just 25 miles to its north, has played a starring role in the entertainment industry as Hollywood's backlot. The town's natural landscapes and varied cityscapes have long provided a versatile backdrop for filmmakers. The past several decades has also seen the addition of dozens of certified soundstages, and the migration of countless film industry professionals to the SCV. Therefore, once simply a home to historic movie ranches, these modern soundstages and thousands of film industry residents have established Santa Clarita as a leading venue for film and television production. In 2022, the City of Santa Clarita generated an estimated $38.5 million in economic impact to the local community from filming. Many factors have contributed to the continued success and appeal of filming in Santa Clarita, including the City's Film Incentive Program, Movie Ranch Overlay Zone, low-cost permit fees and expedited permit processing, along with the California Film and Television Tax Credit Program. Shadowbox Studios will only compliment the already existing filming features Santa Clarita hosts. The film community here works as a family. As one studio is at capacity, they are quick to recommend a neighboring studio, based on what the production is looking for. The existing filming community welcomes Shadowbox Studios with open arms. Their studio project will bring in what our current infrastructures have less of. I urge the Planning Commission to recommend approval for this project and allow us to work locally in an industry that is proud to call Santa Clarita home.

Sincerely,

Ms. Erika Iverson - City Planner,

As a member of the film industry in the Santa Clarita Valley, I am pleased to support the proposed Shadowbox Studios project. It's no secret that Hollywood is the entertainment capital of the world. And Santa Clarita, located just 25 miles to its north, has played a starring role in the entertainment industry as Hollywood's backlot. The town's natural landscapes and varied cityscapes have long provided a versatile backdrop for filmmakers. The past several decades has also seen the addition of dozens of certified soundstages, and the migration of countless film industry professionals to the SCV. Therefore, once simply a home to historic movie ranches, these modern soundstages and thousands of film industry residents have established Santa Clarita as a leading venue for film and television production. In 2022, the City of Santa Clarita generated an estimated $38.5 million in economic impact to the local community from filming. Many factors have contributed to the continued success and appeal of filming in Santa Clarita, including the City's Film Incentive Program, Movie Ranch Overlay Zone, low-cost permit fees and expedited permit processing, along with the California Film and Television Tax Credit Program. Shadowbox Studios will only compliment the already existing filming features Santa Clarita hosts. The film community here works as a family. As one studio is at capacity, they are quick to recommend a neighboring studio, based on what the production is looking for. The existing filming community welcomes Shadowbox Studios with open arms. Their studio project will bring in what our current infrastructures have less of. I urge the Planning Commission to recommend approval for this project and allow us to work locally in an industry that is proud to call Santa Clarita home.

Sincerely,
Mr. Andre Veluzat

Re: SUPPORT - Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

I am writing to show my utmost support for the Shadowbox Studios project. As a resident of Santa Clarita, this much-need project will elevate our City and build upon its reputation for a live, work, and play city for its residents. It's no secret that Santa Clarita has built the reputation of Hollywood north. Just last year, our City saw an increase in location filming, which generated an estimated $38.5 million in economic impact to the local community. Filming here benefits our local economy. Productions spend several millions of dollars on rentals and goods from businesses, homeowners, and nonprofits. Our local hotels, restaurants, attractions, and shopping centers receive direct compensation and generate tax revenue that helps fund roads, programs, recreation, and public safety for Santa Clarita. Queue in Shadowbox Studios. This studio will meet the growing need for studio space, not just in our City, but in Los Angeles County. Further, as demand for studio space in the SCV continues to grow, Shadowbox Studios is committed to partnering with the local film industry to buttress the film footprint in Santa Clarita. I am pleased to say the studio promises to build on the community's stout filmmaking heritage. For our local economy, the proposed project is estimated to generate over 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. Also, it is slated to have over $1 billion in annual economic impact. Indeed, as Shadowbox Studios Santa Clarita builds on the century-long legacy of SCV film production, the objective would be to help make Santa Clarita a first option for the film content creators. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction.

Sincerely,
Mr. Daniel Faina

Re: I Support the Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

As a resident of Oak Ridge, and a direct neighbor to the proposed Shadowbox Studios project, I am writing to express my support for this project. Throughout the process, the developer has worked side-by-side with my community to ensure our thoughts, comments and questions are heard. Further, it has been great to see some of our ideas implemented in the project throughout the past couple of years. As you have seen from the renderings, the Placerita Canyon Community Characteristics have been incorporated in the project. The stages feature an equestrian aesthetic that honors the lifestyle of our town. I want to see this lifestyle protected and to continue, and that is what Shadowbox Studios has promised to do. I recognize that development on this property will occur at some point. I don't think we want to see thousands of houses or apartments here. That would be a real traffic nightmare. This project is the next best option for our community. It will also allow for stability in this area. Moreover, I applaud the efforts from the developer on working with the City towards a trail extension and access from Placerita to downtown Newhall and Metrolink. The enhancement would be of great significance for our community. Santa Clarita is Hollywood North, and we have an abundance of talented people who work in the film industry living right here in our city. How great it would be for these people to be able to regularly work close to their homes and maybe even walk or ride their bikes to the studio. The Planning Commission should see this as the best possible project for our community and the City. We believe it would be the best use for this area and we urge you to approve the development by Shadowbox Studios. Thank you. Sincerely. Lisa Sendewicz

Sincerely,
Mrs. Lisa Sendewicz

City of Santa Clarita
Attn: Planning Commissioners
23920 Valencia Blvd., Suite 300
Santa Clarita, CA 91355

RE: SHADOWBOX STUDIOS PLANNING COMMISSION HEARING – SUPPORT

Shadowbox Studios is a developer, owner, and operator of film and television studio campuses in the Atlanta, London, and Los Angeles metro areas. A typical production requires a studio with soundstages and ample support space that can accommodate a full cast, crew, and other staff. Shadowbox Studios Santa Clarita will consist of 19 purpose-built, modern soundstages ranging from 15,000 to 40,000 square feet, as well as workshops and production offices that will meet the needs of even the most discriminating of filmmakers.

As Shadowbox Studios Santa Clarita meets the growing need for studio space in Los Angeles County, it will also be facilitating approximately 2,400 full time industry jobs and generating approximately $1.5 billion of annual economic impact. This represents one of the largest economic generators in the City's history.

Shadowbox Studios has worked closely with the City, Placerita Canyon residents, adjacent property owners, the business community, and our local non-profits to define and refine the plans under consideration. It's a thoughtful plan and one that should be seen as great value to the City of Santa Clarita to further solidify our position as a major player in the film industry.

I know there are many things to consider as part of the Environmental Impact Report and the City will ensure any impacts are mitigated. The biggest impact to the City is the economic value of Shadowbox Studios which we've been able to quantify. The trick now is to ensure we can get this project through the process quickly and take full advantage of this moment in time when the massive amounts of digital content creation are driving the need for more studio space.

I urge your quick support for the Shadowbox Studios project.

RE: SHADOWBOX STUDIOS PLANNING COMMISSION HEARING – SUPPORT

As the City of Santa Clarita is poised to strengthen its prominent role in the entertainment industry, I am proud to support the proposed Shadowbox Studios project, which will feature modern soundstages, supporting warehouse buildings, office buildings, and a commissary building. The architecture of the studio buildings and parking structure will pay homage to Santa Clarita's storied role in Western films and respect the character of local community standards.

The Shadowbox development team has put an ample amount of thought into their plans the scope and scale of the economic impact and their willingness to change and adjust plans based on community input. In speaking with them, I learned that the architecture of the buildings had been changed which was a direct result of local resident input and suggestions. Further, they have been working with residents of Placerita Canyon to review planned traffic mitigations and enhancements. This is a unique opportunity for our City and one that I hope the City recognizes will be a positive impact for everyone in the City.

The project will continue to work with the local community and ensure traffic flow, trail connectivity, aesthetics and all the environmental items included in the EIR are thoroughly reviewed. However, we must recognize Shadowbox Studios has a far-reaching, positive impact for all of the residents and businesses of Santa Clarita.

I urge you to keep this process moving quickly so we can take advantage of the benefits being brought to our City.

RE: SHADOWBOX STUDIOS PLANNING COMMISSION HEARING – SUPPORT

It's no secret that Hollywood is the entertainment capital of the world. And Santa Clarita, located just 25 miles to its north, has played a starring role in the entertainment industry as Hollywood's backlot. The town's natural landscapes and varied cityscapes have long provided a versatile backdrop for filmmakers. Shadowbox has chosen Santa Clarita to serve as the Los Angeles anchor of its international network of studio facilities. Its proposed studio near downtown Newhall promises to build on the community's stout filmmaking heritage.

Our City has a world-class Arts institute, CalArts, a Community College and The Master's University which all have arts programs. Adding more studio production space to our City's portfolio of existing movie ranches and studios will really help boost the creative arts economy. It seems that Shadowbox Studios has been actively working with local residents and the community to enhance and improve their project over the last year.

In addition to the creation of jobs and the positive economic impact to the City, there are real opportunities for synergy between Shadowbox Studios and our art institutes and colleges. The approval of this project will bring openings to create internships, training, and workforce development opportunities for our students.

The development of Shadowbox Studios in Santa Clarita presents our community with a once in a generation opportunity to truly make Santa Clarita a hub for the film and entertainment industry. Between the new and existing studios in Santa Clarita, the postproduction facilities, movie ranches, pro-filming activities with the City's film office and the presence of our education system, this is truly creating they type of environment other City's and the industry are clamoring for.

Please help make this the best project possible for our city by completely reviewing it but doing it expeditiously.

Shadowbox Studios is a developer, owner, and operator of film and television studio campuses in the Atlanta, London, and Los Angeles metro areas. A typical production requires a studio with soundstages and ample support space that can accommodate a full cast, crew, and other staff. Shadowbox Studios Santa Clarita will consist of 19 purpose-built, modern soundstages ranging from 15,000 to 40,000 square feet, as well as workshops and production offices that will meet the needs of even the most discriminating of filmmakers.

As Shadowbox Studios Santa Clarita meets the growing need for studio space in Los Angeles County, it will also be facilitating approximately 2,400 full time industry jobs and generating approximately $1.5 billion of annual economic impact. This represents one of the largest economic generators in the City's history.

Shadowbox Studios has worked closely with the City, Placerita Canyon residents, adjacent property owners, the business community, and our local non-profits to define and refine the plans under consideration. It's a thoughtful plan and one that should be seen as great value to the City of Santa Clarita to further solidify our position as a major player in the film industry.

I know there are many things to consider as part of the Environmental Impact Report and the City will ensure any impacts are mitigated. The biggest impact to the City is the economic value of Shadowbox Studios which we've been able to quantify. The trick now is to ensure we can get this project through the process quickly and take full advantage of this moment in time when the massive amounts of digital content creation are driving the need for more studio space.

I urge your quick support for the Shadowbox Studios project.

RE: SHADOWBOX STUDIOS PLANNING COMMISSION HEARING – SUPPORT

It's no secret that Hollywood is the entertainment capital of the world. And Santa Clarita, located just 25 miles to its north, has played a starring role in the entertainment industry as Hollywood's backlot. The town's natural landscapes and varied cityscapes have long provided a versatile backdrop for filmmakers. Shadowbox has chosen Santa Clarita to serve as the Los Angeles anchor of its international network of studio facilities. Its proposed studio near downtown Newhall promises to build on the community's stout filmmaking heritage.

Our City has a world-class Arts institute, CalArts, a Community College and The Master's University which all have arts programs. Adding more studio production space to our City's portfolio of existing movie ranches and studios will really help boost the creative arts economy. It seems that Shadowbox Studios has been actively working with local residents and the community to enhance and improve their project over the last year.

In addition to the creation of jobs and the positive economic impact to the City, there are real opportunities for synergy between Shadowbox Studios and our art institutes and colleges. The approval of this project will bring openings to create internships, training, and workforce development opportunities for our students.

The development of Shadowbox Studios in Santa Clarita presents our community with a once in a generation opportunity to truly make Santa Clarita a hub for the film and entertainment industry. Between the new and existing studios in Santa Clarita, the postproduction facilities, movie ranches, pro-filming activities with the City's film office and the presence of our education system, this is truly creating they type of environment other City's and the industry are clamoring for.

Please help make this the best project possible for our city by completely reviewing it but doing it expeditiously.

RE: SHADOWBOX STUDIOS PLANNING COMMISSION HEARING – SUPPORT

As the City of Santa Clarita is poised to strengthen its prominent role in the entertainment industry, I am proud to support the proposed Shadowbox Studios project, which will feature modern soundstages, supporting warehouse buildings, office buildings, and a commissary building. The architecture of the studio buildings and parking structure will pay homage to Santa Clarita's storied role in Western films and respect the character of local community standards.

The Shadowbox development team has put an ample amount of thought into their plans the scope and scale of the economic impact and their willingness to change and adjust plans based on community input. In speaking with them, I learned that the architecture of the buildings had been changed which was a direct result of local resident input and suggestions. Further, they have been working with residents of Placerita Canyon to review planned traffic mitigations and enhancements. This is a unique opportunity for our City and one that I hope the City recognizes will be a positive impact for everyone in the City.

The project will continue to work with the local community and ensure traffic flow, trail connectivity, aesthetics and all the environmental items included in the EIR are thoroughly reviewed. However, we must recognize Shadowbox Studios has a far-reaching, positive impact for all of the residents and businesses of Santa Clarita.

I urge you to keep this process moving quickly so we can take advantage of the benefits being brought to our City.

RE: SHADOWBOX STUDIOS PLANNING COMMISSION HEARING – SUPPORT

It's no secret that Hollywood is the entertainment capital of the world. And Santa Clarita, located just 25 miles to its north, has played a starring role in the entertainment industry as Hollywood's backlot. The town's natural landscapes and varied cityscapes have long provided a versatile backdrop for filmmakers. Shadowbox has chosen Santa Clarita to serve as the Los Angeles anchor of its international network of studio facilities. Its proposed studio near downtown Newhall promises to build on the community's stout filmmaking heritage.

Our City has a world-class Arts institute, CalArts, a Community College and The Master's University which all have arts programs. Adding more studio production space to our City's portfolio of existing movie ranches and studios will really help boost the creative arts economy. It seems that Shadowbox Studios has been actively working with local residents and the community to enhance and improve their project over the last year.

In addition to the creation of jobs and the positive economic impact to the City, there are real opportunities for synergy between Shadowbox Studios and our art institutes and colleges. The approval of this project will bring openings to create internships, training, and workforce development opportunities for our students.

The development of Shadowbox Studios in Santa Clarita presents our community with a once in a generation opportunity to truly make Santa Clarita a hub for the film and entertainment industry. Between the new and existing studios in Santa Clarita, the postproduction facilities, movie ranches, pro-filming activities with the City's film office and the presence of our education system, this is truly creating they type of environment other City's and the industry are clamoring for.

Please help make this the best project possible for our city by completely reviewing it but doing it expeditiously.

RE: SHADOWBOX STUDIOS PLANNING COMMISSION HEARING – SUPPORT

Shadowbox Studios is a developer, owner, and operator of film and television studio campuses in the Atlanta, London, and Los Angeles metro areas. A typical production requires a studio with soundstages and ample support space that can accommodate a full cast, crew, and other staff. Shadowbox Studios Santa Clarita will consist of 19 purpose-built, modern soundstages ranging from 15,000 to 40,000 square feet, as well as workshops and production offices that will meet the needs of even the most discriminating of filmmakers.

As Shadowbox Studios Santa Clarita meets the growing need for studio space in Los Angeles County, it will also be facilitating approximately 2,400 full time industry jobs and generating approximately $1.5 billion of annual economic impact. This represents one of the largest economic generators in the City's history.

Shadowbox Studios has worked closely with the City, Placerita Canyon residents, adjacent property owners, the business community, and our local non-profits to define and refine the plans under consideration. It's a thoughtful plan and one that should be seen as great value to the City of Santa Clarita to further solidify our position as a major player in the film industry.

I know there are many things to consider as part of the Environmental Impact Report and the City will ensure any impacts are mitigated. The biggest impact to the City is the economic value of Shadowbox Studios which we've been able to quantify. The trick now is to ensure we can get this project through the process quickly and take full advantage of this moment in time when the massive amounts of digital content creation are driving the need for more studio space.

I urge your quick support for the Shadowbox Studios project.

RE: SHADOWBOX STUDIOS PLANNING COMMISSION HEARING – SUPPORT

As the City of Santa Clarita is poised to strengthen its prominent role in the entertainment industry, I am proud to support the proposed Shadowbox Studios project, which will feature modern soundstages, supporting warehouse buildings, office buildings, and a commissary building. The architecture of the studio buildings and parking structure will pay homage to Santa Clarita's storied role in Western films and respect the character of local community standards.

The Shadowbox development team has put an ample amount of thought into their plans the scope and scale of the economic impact and their willingness to change and adjust plans based on community input. In speaking with them, I learned that the architecture of the buildings had been changed which was a direct result of local resident input and suggestions. Further, they have been working with residents of Placerita Canyon to review planned traffic mitigations and enhancements. This is a unique opportunity for our City and one that I hope the City recognizes will be a positive impact for everyone in the City.

The project will continue to work with the local community and ensure traffic flow, trail connectivity, aesthetics and all the environmental items included in the EIR are thoroughly reviewed. However, we must recognize Shadowbox Studios has a far-reaching, positive impact for all of the residents and businesses of Santa Clarita.

I urge you to keep this process moving quickly so we can take advantage of the benefits being brought to our City.

Further, they have been working with residents of Placerita Canyon to review planned traffic mitigations and enhancements. This is a unique opportunity for our City and one that I hope the City recognizes will be a positive impact for everyone in the City.

The project will continue to work with the local community and ensure traffic flow, trail connectivity, aesthetics and all the environmental items included in the EIR are thoroughly reviewed. However, we must recognize Shadowbox Studios has a far-reaching, positive impact for all of the residents and businesses of Santa Clarita.

I urge you to keep this process moving quickly so we can take advantage of the benefits being brought to our City.

Dear Chair Berlin,

I am writing to you to call to your attention to Shadowbox Studios' proposed soundstage project to be located in Newhall and Placerita. As you know, Santa Clarita benefits greatly from the film industry and the jobs and revenue it brings into the city. The historical connection with this industry is a source of pride in the area and a partnership that should be continued. I am positive that Shadowbox Studios' project will be an important addition to the public good in Santa Clarita and will improve the livelihoods of our constituents.

I urge you to give this proposal your full and fair consideration. Thank you for your attention to this request, and I look forward to continuing to work with you on this important matter.

City of Santa Clarita Planning Commission
Attn: Chair Renee Berlin
23920 Valencia Blvd.
Santa Clarita, CA 91355

Dear Chair Berlin,

I am writing to express my support for the proposed Shadowbox Studios project.

Santa Clarita has played a starring role in the entertainment industry as Hollywood's backlot. Santa Clarita's natural landscapes and varied cityscapes have long provided a versatile backdrop for filmmakers. The past several decades have seen the addition of dozens of certified soundstages, and the migration of countless film industry professionals to the Santa Clarita Valley. Once simply a home to historic movie ranches, these modern soundstages and thousands of film industry residents have established Santa Clarita as a leading venue for film and television production.

In 2022, the City of Santa Clarita experienced an increase in location filming - providing approximately $38.5 million in economic impact to the local economy. The Shadowbox Studios project expects to generate at least 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. In addition, it will provide over $1 billion in annual economic impact.

Demand for soundstage and studio space in the Santa Clarita Valley continues to grow for both major motion pictures and scripted television series. Shadowbox Studios is committed to partnerships with the local film industry to strengthen the film footprint in Santa Clarita and thereby retain productions that would otherwise escape to other Los Angeles filming submarkets.

The Santa Clarita Valley Chamber of Commerce and the Santa Clarita Valley Economic Development Corporation have endorsed the Shadowbox Studios project.

I urge the City's Planning Commission to recommend approval of the Shadowbox Studios project.

April 17, 2023

City of Santa Clarita Planning Commission
Attn: Chair Renee Berlin
23920 Valencia Blvd.
Santa Clarita, CA 91355

Dear Chair Berlin,

As a member of the film industry for over 40 years in the Santa Clarita Valley, I am pleased to support the proposed Shadowbox Studios project. My grandfather Paul T. Veluzat was born in 1898. He was the oldest living Texas Ranger, who moved our family to Santa Clarita in the 1940s to run cattle and develop our movie ranch. He passed away in Santa Clarita at 101 years old.

Now, having owned or operated family-owned movie ranches for well over 50 years in the Santa Clarita Valley, I have first-hand experience hearing from top actors, film directors, and producers how much they not only enjoy filming in our City, but spending time throughout our community. I have witnessed the positive impact that it has on our community and residents across Santa Clarita, and Shadowbox Studios will only help compliment already existing filming features our City hosts. Therefore, once simply a home to historic movie ranches, these modern soundstages and thousands of film industry residents have established Santa Clarita as a leading venue for film and television production.

The past several decades has also seen the addition of dozens of certified soundstages, and the migration of countless film industry professionals to the SCV. As a studio owner, I welcome the addition of film studios throughout Santa Clarita. This will allow us to work together and ensure we are never at capacity and turn revenue away from our City, residents, and neighboring business owners.

I am currently working with Shadowbox on our movie ranch – formally known as Veluzat Movie Ranch. During my time working with the Shadowbox team, I have been able to learn the company's values and mission. I've witnessed that their main concern is to ensure our residents and businesses throughout the community are properly served. They are continuously looking to accommodate the needs of our neighbors.

In 2022, the City of Santa Clarita generated an estimated $38.5 million in economic impact to the local community from filming. Many factors have contributed to the continued success and appeal of filming in Santa Clarita, including the City's Film Incentive Program, Movie Ranch Overlay Zone, low-cost permit fees and expedited permit processing, along with the California Film and Television Tax Credit Program.

As one studio is at capacity, we are quick to recommend a neighboring studio, based on what the production is looking for. Our existing filming community welcomes Shadowbox Studios with open arms. Their studio project will bring in what our current infrastructures have less of.

Each one of us in the film community must work together to keep the City of Santa Clarita and its residents at the top of mind for production companies, when scouting for film locations for their next project.

I urge the Planning Commission to recommend approval for this project and allow us to continue to work locally in an industry that is proud to call Santa Clarita home.

Sincerely,

Daniel Andre Veluzat

Daniel Andre Veluzat

BLACK BUSINESS COUNCIL
SANTA CLARITA VALLEY CHAMBER OF COMMERCE®

April 17, 2023

City of Santa Clarita Planning Commission
Attn: Chair Renee Berlin
23920 Valencia Blvd.
Santa Clarita, CA 91355

Dear Chair Berlin:

The Black Business Council of the Santa Clarita Valley Chamber of Commerce works to inspire, empower, and promote the economic growth and sustainability of black businesses, entrepreneurs, and professionals within the Santa Clarita Valley. The Black Business Council has reviewed this vital economic development project and is in full support of the Shadowbox Studios project.

Shadowbox Studios will help increase the filming footprint for our city and economic opportunities for black-owned businesses within the SCV. As we had read a couple months ago, the City reported 591 film permits were issued and 1,549 location film days in 2022, which generated an estimated $38.5 million in economic impact to the local community.

Santa Clarita is home to several studios and movie ranches that attract a large number of productions to the area. Shadowbox Studios will complement the current infrastructure that our city has and ensure that production continues to return to Santa Clarita.

Filming benefits our local economy, including local black-owned businesses, and this project will bring a much-needed revenue stream to Santa Clarita.

We are asking for your immediate approval of this project.

Sincerely,

Diiehma Thompsn

Di Thompson

Re: SUPPORT - Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

As President of the Board of Directors for Bridge to Home, I am writing to show our support for the Shadowbox Studios project. As a resident of Santa Clarita, this much-need project will provide economic development and valuable job creation for our City. It's no secret that Santa Clarita has built the reputation of Hollywood north. Just last year, our City saw an increase in location filming, which generated an estimated $38.5 million in economic impact to the local community. Filming here benefits our local economy. Productions spend several millions of dollars on rentals and goods from businesses, homeowners, and nonprofits. Our local hotels, restaurants, attractions, and shopping centers receive direct compensation and generate tax revenue that helps fund roads, programs, recreation, and public safety for Santa Clarita. For our local economy, the proposed project is estimated to generate over 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. Also, it is slated to have over $1 billion in annual economic impact. Indeed, as Shadowbox Studios Santa Clarita builds on the century-long legacy of SCV film production, the objective would be to help make Santa Clarita a first option for the film content creators. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction.

Sincerely,
Mrs. Tracey Carpentier

Ms. Erika Iverson - City Planner,

I am writing to show my utmost support for the Shadowbox Studios project. As a resident of Santa Clarita, this much-need project will elevate our City and build upon its reputation for a live, work, and play city for its residents. It's no secret that Santa Clarita has built the reputation of Hollywood north. Just last year, our City saw an increase in location filming, which generated an estimated $38.5 million in economic impact to the local community. Filming here benefits our local economy. Productions spend several millions of dollars on rentals and goods from businesses, homeowners, and nonprofits. Our local hotels, restaurants, attractions, and shopping centers receive direct compensation and generate tax revenue that helps fund roads, programs, recreation, and public safety for Santa Clarita. Queue in Shadowbox Studios. This studio will meet the growing need for studio space, not just in our City, but in Los Angeles County. Further, as demand for studio space in the SCV continues to grow, Shadowbox Studios is committed to partnering with the local film industry to buttress the film footprint in Santa Clarita. I am pleased to say the studio promises to build on the community's stout filmmaking heritage. For our local economy, the proposed project is estimated to generate over 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. Also, it is slated to have over $1 billion in annual economic impact. Indeed, as Shadowbox Studios Santa Clarita builds on the century-long legacy of SCV film production, the objective would be to help make Santa Clarita a first option for the film content creators. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction.

Sincerely,
Ms. Chris Najarro

SANTA CLARITA VALLEY
ECONOMIC DEVELOPMENT CORPORATION

April 17, 2023

City of Santa Clarita Planning Commission
Attn: Chair Renee Berlin
23920 Valencia Blvd.
Santa Clarita, CA 91355

Dear Chair Berlin,

On behalf of the Santa Clarita Valley Economic Development Corporation (SCVEDC) Board of Directors, I am writing to express our full support of the Shadowbox Studios project. The SCVEDC's mission is to adopt an integrated approach to attracting, retaining, and expanding a diversity of businesses, especially those in key industry clusters. We are a unique private/public partnership representing the united effort of regional industry and government leaders.

The entertainment sector and film making are one of the core business sectors the SCVEDC works with the City to attract to the City to increase the number of good jobs and secure our place as a film-friendly location. A typical production requires a studio with soundstages and ample support space that can accommodate a full cast, crew, and other staff. Shadowbox Studios Santa Clarita will consist of 19 purpose-built, modern soundstages ranging from 15,000 to 40,000 square feet, as well as offer workshops and production offices.

Shadowbox Studios is estimated to generate over 2,000 onsite jobs, approximately 4,000 construction jobs, and over $1 billion in annual economic impact.

Santa Clarita, nicknamed "Hollywood North," offers not only a consummate industry workforce but a significantly minimized burden of production red tape. The Santa Clarita Film Office is known to the film industry for its prompt, friendly and cost-effective service.

As demand for studio space in the SCV continues to grow – for both major motion pictures and scripted television series – Shadowbox Studios is committed to partnering with the local film industry to buttress the film footprint in Santa Clarita and thereby retain productions that would otherwise escape to other Los Angeles filming submarkets.

The SCVEDC Board of Directors urges you to recommend approval for this project and allow Shadowbox Studios to move forward.

Sincerely,

Holly Schroeder, President/CEO
Santa Clarita Valley Economic Development Corporation

Hello - I spoke briefly this evening in favor of the project. I want to be clear that I live in Placerita Canyon on Oak Orchard and have for over 10 years. I support the project. I do not have business interests in Placerita.
The opponents said no one living in Placerita supported the project and that the supporters were outside the Canyon. Not true.

CITY WARNING: This email was sent from an external server. Use caution clicking links or opening attachments.

As this long anticipated proposal comes to the Planning Commission for review, I am writing to express my strong support. In the 21 years I have called Placerita Canyon my home, numerous projects, primarily residential, had been proposed, none of which advanced. I would like to mention that the first project brought to my attention was a proposal for over 1500 apartments which the developer at the time pulled out indicating that a project of that nature was not suitable for our area. I believe that rings true to this day.

Therefore, given the uptick in content creation, television and motion picture filming, when Shadowbox was initially proposed for the project site, I became intrigued by its potential.

No doubt, the project as configured is large with community impacts such as increased traffic which need to be addressed. Then again so would have the 2000 plus multiple unit dwellings that are lurking in the distance. Having met with Shadowbox representatives, I feel comfortable with their ongoing commitment to work with our community to maintain our rural character in their plans, including themed architecture as well as local enhancements such as signage and both bicycle and equestrian trail connectivity.

As Shadowbox proceeds through the planning process, it is my hope that the Planning Commission view this project as an opportunity for entire Santa Clarita while taking into consideration local concerns. At some point, something is going to be built on that long vacant land. Why not it be this studio?

Thank you for your due diligence review and hopefully future recommendation to the City Council for approval.

Sincerely,

Linda Tarnoff
Chair, Placerita Advisory Committee on Trails

April 24, 2023

Honorable Members of the Santa Clarita Planning Commission:

Re: Shadowbox Studios

In 1975, I bought my first home in Placerita Canyon at the corner of Aden and Placerita Canyon, and my present home on Placerita Canyon, across from Melody Ranch, in 1986. I was a member of the PCOPA board in the late ’80s, and I feel I was instrumental in stopping a metro link station at the 13th and Railroad and the previous alignment of Dockweiler. I mention this to add some authenticity to my history of Placerita Canyon.

I am strongly in favor of the Showbox Studio development.

The present board members of the PCPOA are a smart, hardworking, and dedicated group of caring individuals. However, as a past board member, I know the board only reflects the opinion of a portion of the residents in the canyon. Whether it be apathy, inconvenience, or simply not feeling overly affected by the current events of the canyon.

The purpose of this letter, after talking with several homeowners who agree with me and who have asked me to convey our feelings to you about the Shadowbox project, is to make you aware of our observations and concerns (which are few).

It is true that any development on this land impacts the residents of Placerita Canyon more than anyone else in the City of Santa Clarita. It is also true that any development impacts everyone living in the city. Some projects would increase housing, while others would create jobs and income for the city. What we all know, as homeowners in Placerita, is this land will not remain vacant. Something will be built. Most undoubtedly something that is much more intrusive to the community by adding more traffic than the Shadowbox project and not being in congruence with the neighborhood or as beneficial to the city.

Unfortunately, Placerita Canyon is not a bucolic neighborhood. It could best be described as rustic. Our entrance goes over railroad tracks, by a 50-year-old strip mall, whose backside is small manufacturing shops and mini storage before

entering a neighborhood composed of a burgeoning college and dormitories, a sports field, trailer park, a mix of eclectic million-dollar homes in the middle and ending through oil fields and refinery, all within two miles.

However, as residents of Placerita Canyon, we love it.

In the face of change, years ago, we even created a Special Standards District (SSD) to help preserve some of the characteristics of our rural community.

Interestingly, of the five major components of the SSD, the Shadowbox Studios project meets those standards, with the exception of preserving and enhancing "the secluded, rural equestrian character of the community." Unfortunately, time itself has eroded this standard. As someone who has lived on Placerita Canyon, across from Melody Ranch, and owns a horse and rides throughout the canyon two to three days a week for the last five years, there are less than 10 homeowners that I know of who now board and ride a horse in the canyon. Even this is a rairity. The concept that this is an "equestrian" community" originated in 1922. In 1952 Gene Autry set aside 10 acres for his movie town Melody Ranch. 70 years later the rural community exists **without** an equestrian lifestyle. Walking and bicycling account for 99% of the daily outdoor activity in the canyon. What does remain is the most important restriction for building homes in Placerita Canyon. It is the minimum ½ acre residential lot size. It sets the tone for the entire canyon. This restriction will remain with the Shadowbox Studios project.

That being said, **as with any project on this site**, there are concerns that must be addressed.

> #1 The bottleneck at 13th Street and Railroad Avenue This is the most important issue. However, note that the project has three emergency exits. There also is a fourth, Placerita Canyon to the east. These gates are open during an emergency or inclement weather.
>
> #2Providing emergency egress to the north. This would be beneficial if it could happen. But if not, it is not necessary for the safety of the residents of Placerita Canyon.
>
> #3 The impact on property values, as compared to shopping or housing projects or a business park, we believe having the Shadowbox Studios would be a much-preferred entrance to the canyon.

We appreciate your efforts to help our neighborhood in its evolution and to remain fluid in allowing Placerita Canyon to continue to represent the Golden Age of life in Newhall and the City of Santa Clarita. And, rest assured, your approval of Shadowbox Studios will continue to preserve the movie-making history of Placerita Canyon.

Sincerely,

Anthony Matthess

Re: Approve Shadowbox Studios

Ms. Erika Iverson - City Planner,

As a resident of Placerita Canyon, and a direct neighbor to the proposed Shadowbox Studios project, I am writing to express my support for this project. Throughout the process, the developer has worked side-by-side with our community to ensure our thoughts, comments and questions are heard. Further, it has been great to see some of our ideas implemented in the project throughout the past couple of years. As you have seen from the renderings, our Placerita Canyon Community Characteristics have been incorporated in the project. The stages feature an equestrian aesthetic that honors our lifestyle. I want to see this lifestyle protected and to continue, and that is what Shadowbox Studios has promised to do. I recognize that development on this property will occur at some point. I don't think we want to see thousands of houses or apartments here. That would be a real traffic nightmare. This project is the next best option for our community. Moreover, I applaud the efforts from the developer on working with the City towards a trail extension and access from Placerita to downtown Newhall and Metrolink. The enhancement would be of great significance for our community. Placerita Canyon has a long history of movie ranches and filming from Disney Ranch on the South to Melody Ranch in the middle of Placerita Canyon. This city, and Placerita Canyon, have an abundance of talented people who work in the film industry. How great it would be for these people to be able to regularly work close to their homes and maybe even walk or ride their bikes to the studio. On behalf of my neighbors in Placerita Canyon, I hope the Planning Commission sees this as the best possible project for our community and the City. Please the project and allow it to move on to the next step.

Sincerely,
Matt Green

Re: Approve Shadowbox Studios

Ms. Erika Iverson - City Planner,

As a resident of Placerita Canyon, and a direct neighbor to the proposed Shadowbox Studios project, I am writing to express my support for this project. Throughout the process, the developer has worked side-by-side with our community to ensure our thoughts, comments and questions are heard. Further, it has been great to see some of our ideas implemented in the project throughout the past couple of years. As you have seen from the renderings, our Placerita Canyon Community Characteristics have been incorporated in the project. The stages feature an equestrian aesthetic that honors our lifestyle. I want to see this lifestyle protected and to continue, and that is what Shadowbox Studios has promised to do. I recognize that development on this property will occur at some point. I don't think we want to see thousands of houses or apartments here. That would be a real traffic nightmare. This project is the next best option for our community. Moreover, I applaud the efforts from the developer on working with the City towards a trail extension and access from Placerita to downtown Newhall and Metrolink. The enhancement would be of great significance for our community. Placerita Canyon has a long history of movie ranches and filming from Disney Ranch on the South to Melody Ranch in the middle of Placerita Canyon. This city, and Placerita Canyon, have an abundance of talented people who work in the film industry. How great it would be for these people to be able to regularly work close to their homes and maybe even walk or ride their bikes to the studio. On behalf of my neighbors in Placerita Canyon, I hope the Planning Commission sees this as the best possible project for our community and the City. Please the project and allow it to move on to the next step.

Sincerely,
Peter Shickle

Re: SUPPORT the Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

I am writing to show my utmost support for the Shadowbox Studios project. As a resident of Santa Clarita, this much-need project will elevate our City and build upon its reputation for a live, work, and play city for its residents. It's no secret that Santa Clarita has built the reputation of Hollywood north. Just last year, our City saw an increase in location filming, which generated an estimated $38.5 million in economic impact to the local community. Filming here benefits our local economy. Productions spend several millions of dollars on rentals and goods from businesses, homeowners, and nonprofits. Our local hotels, restaurants, attractions, and shopping centers receive direct compensation and generate tax revenue that helps fund roads, programs, recreation, and public safety for Santa Clarita. Queue in Shadowbox Studios. This studio will meet the growing need for studio space, not just in our City, but in Los Angeles County. Further, as demand for studio space in the SCV continues to grow, Shadowbox Studios is committed to partnering with the local film industry to buttress the film footprint in Santa Clarita. I am pleased to say the studio promises to build on the community's stout filmmaking heritage. For our local economy, the proposed project is estimated to generate over 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. Also, it is slated to have over $1 billion in annual economic impact. Indeed, as Shadowbox Studios Santa Clarita builds on the century-long legacy of SCV film production, the objective would be to help make Santa Clarita a first option for the film content creators. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction.

Sincerely,
Mr. Brett Thomas

As a resident of Placerita Canyon, and a direct neighbor to the proposed Shadowbox Studios project, I am writing to express my support for this project. Throughout the process, the developer has worked side-by-side with our community to ensure our thoughts, comments and questions are heard. Further, it has been great to see some of our ideas implemented in the project throughout the past couple of years. As you have seen from the renderings, our Placerita Canyon Community Characteristics have been incorporated in the project. The stages feature an equestrian aesthetic that honors our lifestyle. I want to see this lifestyle protected and to continue, and that is what Shadowbox Studios has promised to do. I recognize that development on this property will occur at some point. I don't think we want to see thousands of houses or apartments here. That would be a real traffic nightmare. This project is the next best option for our community. Moreover, I applaud the efforts from the developer on working with the City towards a trail extension and access from Placerita to downtown Newhall and Metrolink. The enhancement would be of great significance for our community. Placerita Canyon has a long history of movie ranches and filming from Disney Ranch on the South to Melody Ranch in the middle of Placerita Canyon. This city, and Placerita Canyon, have an abundance of talented people who work in the film industry. How great it would be for these people to be able to regularly work close to their homes and maybe even walk or ride their bikes to the studio. On behalf of my neighbors in Placerita Canyon, I hope the Planning Commission sees this as the best possible project for our community and the City. Please the project and allow it to move on to the next step.

Sincerely,
Casey Cole

Re: SUPPORT the Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

I am writing to show my utmost support for the Shadowbox Studios project. As a resident of Santa Clarita, this much-need project will elevate our City and build upon its reputation for a live, work, and play city for its residents. It's no secret that Santa Clarita has built the reputation of Hollywood north. Just last year, our City saw an increase in location filming, which generated an estimated $38.5 million in economic impact to the local community. Filming here benefits our local economy. Productions spend several millions of dollars on rentals and goods from businesses, homeowners, and nonprofits. Our local hotels, restaurants, attractions, and shopping centers receive direct compensation and generate tax revenue that helps fund roads, programs, recreation, and public safety for Santa Clarita. Queue in Shadowbox Studios. This studio will meet the growing need for studio space, not just in our City, but in Los Angeles County. Further, as demand for studio space in the SCV continues to grow, Shadowbox Studios is committed to partnering with the local film industry to buttress the film footprint in Santa Clarita. I am pleased to say the studio promises to build on the community's stout filmmaking heritage. For our local economy, the proposed project is estimated to generate over 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. Also, it is slated to have over $1 billion in annual economic impact. Indeed, as Shadowbox Studios Santa Clarita builds on the century-long legacy of SCV film production, the objective would be to help make Santa Clarita a first option for the film content creators. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction.

Re: SUPPORT the Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

I am writing to show my utmost support for the Shadowbox Studios project. As a resident of Santa Clarita, this much-need project will elevate our City and build upon its reputation for a live, work, and play city for its residents. It's no secret that Santa Clarita has built the reputation of Hollywood north. Just last year, our City saw an increase in location filming, which generated an estimated $38.5 million in economic impact to the local community. Filming here benefits our local economy. Productions spend several millions of dollars on rentals and goods from businesses, homeowners, and nonprofits. Our local hotels, restaurants, attractions, and shopping centers receive direct compensation and generate tax revenue that helps fund roads, programs, recreation, and public safety for Santa Clarita. Queue in Shadowbox Studios. This studio will meet the growing need for studio space, not just in our City, but in Los Angeles County. Further, as demand for studio space in the SCV continues to grow, Shadowbox Studios is committed to partnering with the local film industry to buttress the film footprint in Santa Clarita. I am pleased to say the studio promises to build on the community's stout filmmaking heritage. For our local economy, the proposed project is estimated to generate over 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. Also, it is slated to have over $1 billion in annual economic impact. Indeed, as Shadowbox Studios Santa Clarita builds on the century-long legacy of SCV film production, the objective would be to help make Santa Clarita a first option for the film content creators. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction.

Sincerely,
Mr. Fred Arnold

May, 15, 2023

Honorable Members of the Santa Clarita Planning Commission:

Re: Shadowbox Studios.

Why is the Shadowbox Studios project in Newhall good for everyone?

1. It will provide hundreds of jobs in the City of Santa Clarita, which reduces the carbon footprint, and traffic.
2. The positive fiscal benefit for the city is sorely needed to continue to provide the community with top-notch services, infrastructure, parks, and be able to hire smart people to do smart things.
3. Job creation benefits all surrounding businesses, thereby increasing jobs and revenue to the city and the subsequent building of additional businesses and service businesses in downtown Newhall (the ripple effect).
4. Shadowbox Studios' obsolescence factor is almost nonexistent, compared to other brick-and-mortar developments (JC Penny, Sears, Macy's, Blockbuster, etc.), thereby not eliminating the revenue flow to the city, and disrupting employment for the community.
5. Compared to high-density multi-family housing (due to it being adjacent to the railroad tracks), this project will impact traffic significantly less (re. cars per day and the staggered ingress and egress times).
6. If a housing project is built the bottleneck at the Placerita gate will be a nightmare because the added residents within the Special Standards District will have access through the gate. Mornings and evenings will be unmanageable, with each car needing to stop to raise the gate).
7. Due to the realization that the "equestrian lifestyle" in the Placerita Canyon is relatively non-existent, Shadowbox Studios adheres to all aspects of the Special Standards District. With this fact, the developers are still planning on providing trails for the community. Interestingly, 30 years ago, Councilperson Weste advocated for riding trails throughout the canyon. As of today, not one trail has been built.

8. Of the fractionally small number (relative to all the homeowners of Placerita Canyon and the 200,000 residents of Santa Clarita), of people representing the residents of the Canyon (the PCOPA), over 50% of them are opposed to any project being built at this location. So what does that leave, three people?
9. The approval of this project, as it stands, should not be withheld or altered for the self-interest of a few people.

Respectfully,

Anthony Matthess

21244 Placerita Canyon Rd

Newhall, Ca 91321

Re: Approve Shadowbox Studios

Ms. Erika Iverson - City Planner,

As a resident of Placerita Canyon, and a direct neighbor to the proposed Shadowbox Studios project, I am writing to express my support for this project. Throughout the process, the developer has worked side-by-side with our community to ensure our thoughts, comments and questions are heard. Further, it has been great to see some of our ideas implemented in the project throughout the past couple of years. As you have seen from the renderings, our Placerita Canyon Community Characteristics have been incorporated in the project. The stages feature an equestrian aesthetic that honors our lifestyle. I want to see this lifestyle protected and to continue, and that is what Shadowbox Studios has promised to do. I recognize that development on this property will occur at some point. I don't think we want to see thousands of houses or apartments here. That would be a real traffic nightmare. This project is the next best option for our community. Moreover, I applaud the efforts from the developer on working with the City towards a trail extension and access from Placerita to downtown Newhall and Metrolink. The enhancement would be of great significance for our community. Placerita Canyon has a long history of movie ranches and filming from Disney Ranch on the South to Melody Ranch in the middle of Placerita Canyon. This city, and Placerita Canyon, have an abundance of talented people who work in the film industry. How great it would be for these people to be able to regularly work close to their homes and maybe even walk or ride their bikes to the studio. On behalf of my neighbors in Placerita Canyon, I hope the Planning Commission sees this as the best possible project for our community and the City. Please the project and allow it to move on to the next step.

Sincerely,
Scott Wenrich

Dear Mrs. Iverson:

We have made our home in Newhall for the past 25 years and support the Shadowbox Studios project that is currently being considered by the Planning Commission. This project would add momentum to Newhall's renaissance and would support the City's investment in the Old Town Newhall area. We fully support the project and hope the Planning Commission will approve it.

Sincerely,

Ben Jarvis

Written comment - in favor of proposed Shadowbox project

We have lived in Placerita Canyon since 1987. There has been subtle changes in those years including an extension of Masters University, a private gate installation at one end of Placerita Canyon road, several housing projects such as Town and Country Homes, Palomino estates, bridges that have gone down from running creeks, church traffic, horse facilities and more. Change can be challenging but there are ways to embrace change while keeping a community in-tact.

There has always been a question about the field on 13th street. Besides filling in for Cowboy Poetry parking, there have been proposals for housing tracks that range from townhomes and apartments to communities of single family homes.

I am sure I speak for many in the canyon who would love to see the field stay exactly as it is but knowing deep down that is impossible and not reasonable and not our decision. So what would be good for us - the Placerita Canyon folks?

We believe it would be much better to communicate with one neighbor instead of hundreds and with the history of filming in our town, a sound stage seems to make sense. The Shadowbox project appears to be a good fit for the field if some concessions can be made - specifically to the traffic flow and the entry gates.

We stand with our neighbors and the PCPOA who have done an amazing job keeping residents informed of each stage of this process. We also appreciate the community outreach by Shadowbox and their willingness to improve our community and be good neighbors.

We ask the Planning Commission to help us by keeping the traffic impacts to a minimum and ensure our residents, horses, goats, walkers and children on bikes, remain safe and secure in our special community for years to come.

Re: SUPPORT the Shadowbox Studios Project

Ms. Erika Iverson - City Planner,

I am writing to show my utmost support for the Shadowbox Studios project. As a resident of Santa Clarita, this much-need project will elevate our City and build upon its reputation for a live, work, and play city for its residents. It's no secret that Santa Clarita has built the reputation of Hollywood north. Just last year, our City saw an increase in location filming, which generated an estimated $38.5 million in economic impact to the local community. Filming here benefits our local economy. Productions spend several millions of dollars on rentals and goods from businesses, homeowners, and nonprofits. Our local hotels, restaurants, attractions, and shopping centers receive direct compensation and generate tax revenue that helps fund roads, programs, recreation, and public safety for Santa Clarita. Queue in Shadowbox Studios. This studio will meet the growing need for studio space, not just in our City, but in Los Angeles County. Further, as demand for studio space in the SCV continues to grow, Shadowbox Studios is committed to partnering with the local film industry to buttress the film footprint in Santa Clarita. I am pleased to say the studio promises to build on the community's stout filmmaking heritage. For our local economy, the proposed project is estimated to generate over 2,000 onsite jobs, over 5,000 operations jobs, and approximately 4,000 construction jobs. Also, it is slated to have over $1 billion in annual economic impact. Indeed, as Shadowbox Studios Santa Clarita builds on the century-long legacy of SCV film production, the objective would be to help make Santa Clarita a first option for the film content creators. I urge the Planning Commission to recommend approval of this project, so it can receive its final approval from the City Council and begin construction.

Sincerely,
Michael Grisanti

Re: Approve Shadowbox Studios

Ms. Erika Iverson - City Planner,

As a resident of Placerita Canyon, and a direct neighbor to the proposed Shadowbox Studios project, I am writing to express my support for this project. Throughout the process, the developer has worked side-by-side with our community to ensure our thoughts, comments and questions are heard. Further, it has been great to see some of our ideas implemented in the project throughout the past couple of years. As you have seen from the renderings, our Placerita Canyon Community Characteristics have been incorporated in the project. The stages feature an equestrian aesthetic that honors our lifestyle. I want to see this lifestyle protected and to continue, and that is what Shadowbox Studios has promised to do. I recognize that development on this property will occur at some point. I don't think we want to see thousands of houses or apartments here. That would be a real traffic nightmare. This project is the next best option for our community. Moreover, I applaud the efforts from the developer on working with the City towards a trail extension and access from Placerita to downtown Newhall and Metrolink. The enhancement would be of great significance for our community. Placerita Canyon has a long history of movie ranches and filming from Disney Ranch on the South to Melody Ranch in the middle of Placerita Canyon. This city, and Placerita Canyon, have an abundance of talented people who work in the film industry. How great it would be for these people to be able to regularly work close to their homes and maybe even walk or ride their bikes to the studio. On behalf of my neighbors in Placerita Canyon, I hope the Planning Commission sees this as the best possible project for our community and the City. Please the project and allow it to move on to the next step.

Sincerely,
Gloria Rodriguez

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am reaching out to seek information and clarification regarding the proposed Shadowbox Studios project and the potential requirement for an additional ingress and egress to the studio campus as a condition of approval. I have several questions that I would greatly appreciate your assistance in addressing:

1. Could you please provide further details on the reasons behind the absence of discussions to date regarding the need for an additional ingress and egress to the Shadowbox Studios campus? What factors were taken into consideration when determining that no such access point was necessary?
2. Has a comprehensive traffic impact analysis been conducted to evaluate the potential effects of the proposed ingress and egress on the surrounding roadways? If so, what were the findings of this analysis, and how were they taken into account during the planning process? Specifically, I would like to inquire about the simulation presented during the May 16th Planning Commission meeting, which demonstrated congestion on Railroad Avenue. How will this issue be addressed? Additionally, what does the simulation depict when a freight train passes (averaging 8 times per day in 2017)?
3. How would the addition of an extra ingress and egress align with the overall transportation infrastructure plan for the Santa Clarita area? Does it seamlessly integrate with existing traffic patterns and roadways, or would it necessitate significant modifications to the surrounding transportation network?
4. What measures are being considered to ensure that any newly established ingress and egress points are designed in a manner that minimizes potential traffic congestion and prioritizes safety for both studio personnel and the general public?
5. Are there any provisions or plans in place to enhance public transportation options to and from the Shadowbox Studios campus, taking into account the potential increase in traffic associated with the project?
6. Has the local community been consulted or involved in the decision-making process regarding the necessity of an additional ingress and egress? If so, what feedback has been received from residents and local businesses, and how has it influenced the considerations of the planning commission?
7. Have alternative solutions or approaches been explored to address the traffic concerns without requiring a new ingress and egress? If so, I would appreciate learning more about these alternatives and the reasons why they were not deemed suitable for the project.
8. Will there be any specific conditions or restrictions imposed on the use of the new ingress and egress points to mitigate potential negative impacts, such as limiting their usage during peak traffic hours or implementing traffic control measures?
9. How will the effectiveness of the new ingress and egress points be monitored and evaluated once they are operational? Are there plans in place to address any unforeseen issues or make necessary adjustments as needed?

Thank you for taking the time to consider and respond to these questions. I am eagerly anticipating your insights and clarification on the proposed Shadowbox Studios project and the potential need for additional ingress and egress requirements.

Sincerely, Frances Zamora

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the possibility of a requirement for an additional ingress and egress to the studio campus as a condition of approval. I have several questions regarding this matter and would appreciate answers to be provided:

Could you please elaborate on why there has been no discussion to date requiring an additional ingress and egress to the Shadowbox Studios campus? What factors were considered in determining there was no need for an additional access point?

Has a thorough traffic impact analysis been conducted to assess the potential effects of the proposed ingress and egress on the surrounding roadways? If so, what were the findings of this analysis, and how were they taken into account during the planning process? Specifically, in the simulation shown at the May 16th Planning Commission meeting, backup on Railroad Avenue was evident. How will this be addressed? What does the simulation and backup look like when a freight train (average 8/day in 2017) goes by?

How would an additional ingress and egress align with the overall transportation infrastructure plan for the Santa Clarita area? Does it complement existing traffic patterns and roadways, or does it necessitate significant modifications to the surrounding transportation network?

What measures will be taken to ensure that any new ingress and egress points are designed in a way that minimizes potential traffic congestion and maximizes safety for both studio personnel and the general public?

Will there be any provisions or plans to enhance public transportation options to and from the Shadowbox Studios campus, considering the potential increase in traffic associated with the project?

Has the community been consulted or involved in the decision-making process regarding the need for an additional ingress and egress? If so, what feedback has been received from residents and local businesses, and how has it influenced the planning commission's considerations?

Are there any alternative solutions or approaches that have been explored to address the traffic concerns without a new ingress and egress? If so, what were these alternatives, and why were they not deemed suitable for the project?

Will there be any specific conditions or restrictions imposed on the use of a new ingress and egress points to mitigate potential negative impacts, such as limiting their use during peak traffic hours or implementing traffic control measures?

How will the effectiveness of the new ingress and egress points be monitored and evaluated once they are operational? Will there be any mechanisms in place to address any unforeseen issues or make adjustments if needed?

Thank you for taking the time to consider and respond to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the need for additional ingress and egress requirements.

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the potential requirement for at least one additional ingress and egress to the studio campus. I have several questions regarding this matter, particularly regarding the impact on emergency response vehicles, and would appreciate your response:

Has there been any consideration given to the potential impact of traffic delays and increased travel times on emergency response vehicles in the surrounding area? How will the proposed project affect the response times of emergency services?

Will there be any measures in place to ensure that emergency services are not significantly affected by the lack of additional ingress and egress points? Are there plans to provide emergency vehicles with priority access or alternative routes to mitigate potential delays?

Has the planning commission consulted with local fire departments, police departments, and emergency medical services to assess the impact of the proposed ingress and egress on their operations? What feedback or recommendations have been provided by these emergency services regarding the project?

Will the proposed project include any infrastructure improvements or modifications, such as dedicated emergency vehicle lanes or traffic signal preemption systems, to facilitate the smooth flow of emergency vehicles in and out of the studio campus?

Have there been any simulations or studies conducted to evaluate the impact of the proposed ingress and egress on emergency response times? If so, what were the findings of these studies, and how have they been taken into account during the planning process?

Will there be ongoing coordination and communication between the studio campus management and the local emergency services to address any potential issues or concerns that may arise during the operation of the new ingress and egress points?

Are there any plans for emergency preparedness and response training programs to ensure that studio staff and personnel are adequately trained to facilitate emergency vehicle access and support emergency responders in case of an incident?

How will the effectiveness of the measures taken to mitigate the impact on emergency response vehicles be monitored and evaluated? Will there be regular assessments or reviews to address any issues that may arise and make necessary adjustments?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the potential impact on emergency services.

Sincerely,

Name: Wendy R Zamora

Address: 388 Smoke Ridge Trail, Calimesa CA 92320

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the potential requirement for an additional ingress and egress to the studio campus. In relation to this matter, I have several questions, including concerns about labor union strikes and general picketing by unions. I would appreciate your response:

Has there been any consideration given to the potential impact of labor union strikes on the ingress and egress points of the Shadowbox Studios campus? Are there contingency plans in place to address potential disruptions caused by strikes and to ensure the safety and security of all involved parties?

Will there be a designated gate or entrance specifically designated for labor union activities during strikes or other labor-related events? If so, how will this gate be identified and communicated to the labor unions and relevant parties?

Have discussions been held with labor unions or representatives to understand their needs and requirements during strikes? What measures will be in place to facilitate peaceful demonstrations and ensure that ingress and egress for non-striking personnel are not hindered and safe passage for residents?

Will there be security personnel or law enforcement presence to manage and monitor labor union strikes, ensuring that access to the studio campus is maintained for non-striking personnel?

How will communication and coordination be handled between studio management, labor unions, and law enforcement agencies to ensure the safety and smooth operation of the ingress and egress points during labor union activities?

Are there any limitations or conditions that will be imposed on the use of the ingress and egress points during labor union strikes, such as specific hours of operation or alternative access routes for non-striking personnel?

Has there been any analysis or assessment of the potential impact of labor union strikes on traffic flow in the surrounding area? Are there plans in place to minimize disruptions to traffic and mitigate any adverse effects on the local community?

Will there be any monitoring or evaluation mechanisms in place to assess the effectiveness of the designated gate and overall management during labor union strikes? How will feedback and lessons learned from such events be incorporated into future planning and decision-making processes?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project, including any considerations related to labor union strikes and the designated ingress and egress points.

Sincerely,

Name: _____

Address: _____

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the potential requirement for an additional ingress and egress to the studio campus. In light of recent labor union strikes in various industries, I have some questions regarding the project's preparedness and planning in such scenarios. I would appreciate your response:

Has there been any consideration given to the potential impact of labor union strikes on the ingress and egress points of the Shadowbox Studios campus? Are there contingency plans in place to address potential disruptions to traffic flow during strikes?

Where will be the designated gate or access point specifically designated for use during labor union strikes or picketing of non union shows? How will this gate be determined, and what measures will be implemented to ensure the safety and security of both striking workers and other individuals accessing the studio campus?

How will the choice of the designated gate during labor union strikes and non union show picketing align with the overall traffic management plan for the Shadowbox Studios project? Will this gate choice aim to minimize disruptions to traffic flow in the surrounding area?

Has the project engaged in discussions or negotiations with labor unions or other relevant stakeholders regarding strike-related access and traffic management? If so, what feedback or agreements have been reached to address these concerns?

Will there be any communication protocols established between the studio management, local authorities, and labor union representatives to facilitate smooth traffic operations and ensure the safety of all individuals in the canyon during labor union strikes?

How will the public be informed about the designated gate and any alternative traffic routes during labor union strikes? Will there be clear signage and communication channels in place to guide drivers and minimize confusion?

Will there be any temporary traffic control measures implemented, such as additional signage, traffic officers, or road closures, during labor union strikes or non union show picketing to ensure the safety and efficiency of traffic flow in the vicinity of the Shadowbox Studios campus?

How will the effectiveness of the traffic management measures during labor union strikes be monitored and evaluated? Will there be mechanisms in place to address any issues that may arise and make necessary adjustments to minimize disruptions?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the potential need for specific ingress and egress considerations during labor union strikes.

Sincerely,

Name: Jan Chang

Address: 29015 Newhall Ave 91321

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the potential requirement for an additional ingress and egress to the studio campus. I have several questions regarding this matter, particularly concerning the impact on emergency response vehicles, and would appreciate your response:

1. Has there been any consideration given to the potential impact of traffic delays and increased travel times on emergency response vehicles in the surrounding area?
2. Are there any studies or assessments conducted to evaluate the potential effects on emergency services? If so, what are the findings?
3. Will there be any measures or provisions in place to ensure that emergency services are not significantly affected by a single point of entry? How will emergency vehicles navigate the area efficiently during times of increased traffic congestion?
4. Have emergency service providers, such as fire departments, paramedics, and law enforcement agencies, been consulted or involved in the planning process to address their concerns and needs related to the proposed ingress and egress requirements? If so, please summarize their input and recommendations.
5. Are there any plans to enhance the infrastructure or implement specialized traffic control measures to facilitate the smooth movement of emergency response vehicles in the vicinity of the Shadowbox Studios campus both in and outside Placerita Canyon?
6. Will emergency service providers have direct communication or coordination with the studio management to address any potential conflicts or issues arising from the increased traffic associated with the project?
7. Has the potential impact on emergency response times been assessed considering the project's additional ingress and egress, if the planning commission requires it as a condition of approval? Are there any benchmarks or standards in place to ensure that emergency services can reach their destinations within a reasonable timeframe?
8. Will there be any training or education programs for studio employees and workers to promote awareness and cooperation in facilitating the passage of emergency vehicles during times of high traffic volume?
9. How will the effectiveness of the measures implemented to mitigate the impact on emergency response vehicles be monitored and evaluated? Will there be regular assessments and feedback from emergency service providers to address any shortcomings or make necessary adjustments?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the potential need for additional ingress and egress requirements, specifically concerning emergency services.

Sincerely,

Name: Paul Brown

Address: 21515 Placerita Canyon #3 Newhall, CA 91321

MASTER CASE NO: 21-109

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the established speed limits on Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street, as well as the considerations given to equestrian, pedestrian, and golf cart vehicles that share these roadways. I would appreciate your response to the following questions:

What are the established speed limits on Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street? Have there been any recent changes or updates to these speed limits, or are they consistent with the current regulations?

What factors were considered in determining the speed limits on these roadways? Were considerations given to the surrounding land use, nearby residential areas, safety concerns, and the presence of equestrian, pedestrian, and golf cart vehicles?

How will the established speed limits be enforced on Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street? Are there any plans or initiatives in place to enhance enforcement measures to ensure compliance and maintain safety for all road users?

What specific considerations were given to horses and riders that utilize these roadways? Are there designated equestrian lanes or dedicated areas to accommodate equestrian activities, such as riding trails or designated crossing points?

How will pedestrian safety be ensured on these roadways? Are there designated sidewalks, crosswalks, or pedestrian-friendly features in place to facilitate safe pedestrian movement?

Are there any specific regulations or guidelines pertaining to golf cart vehicles that share these roadways? Are there designated lanes or areas for golf carts, and will there be any restrictions on their usage?

Has there been community input or consultation with local equestrian groups, pedestrian advocacy organizations, and golf cart owners regarding the design and usage of these roadways? What feedback has been received, and how has it influenced the planning commission's considerations?

Will there be ongoing monitoring and evaluation of the roadways' safety and effectiveness, considering the shared use by various types of vehicles? Are there plans for periodic reviews or updates to ensure the continued safety and efficiency of these roadways for all users?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the established speed limits and considerations for equestrian, pedestrian, and golf cart vehicles on Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street.

Sincerely,

Name: Nina Zamora

Address: 21233 Placerita Cyn

MASTER CASE NO: 21-109

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the potential requirement for an additional ingress and egress to the studio campus. I have a few additional questions regarding labor union strikes and would appreciate your response:

In the event of a labor union strike involving the Shadowbox Studios project, has there been any consideration given to the designation of a specific gate or entrance that would be accessible during the strike period? Will there be a contingency plan in place to ensure that essential services and activities can continue without disruption?

How will the designation of a specific gate or entrance during a labor union strike be determined? Will it be a collaborative decision between the studio management and the labor union involved, or will the planning commission have a role in making this determination?

Will there be any provisions or protocols established to facilitate safe and orderly access to the studio campus during a labor union strike? How will security and crowd management be handled to ensure the well-being of all parties involved?

Has the potential impact of labor union strikes on traffic congestion and public safety in the surrounding area been assessed? Are there any plans or strategies in place to mitigate these potential effects?

Will there be any communication channels established between the studio management, labor unions, and local authorities to ensure the timely and effective dissemination of information during a labor union strike? How will the public be informed of any changes or developments that may affect their travel plans or safety?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the potential considerations related to labor union strikes.

Sincerely,

Name: Leslie Tasevski (Leslie Tasevski)

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

Has there been any consideration given to the potential impact of traffic delays and increased travel times on emergency response vehicles in the surrounding areas of Newhall and Placerita Canyon specifically? Will there be any measures in place to ensure that emergency services are not significantly affected by the lack of additional ingress and egress points if not required as a condition of approval?

How will emergency response vehicles, such as ambulances and fire trucks, navigate through the area considering the potential increase in traffic congestion caused by the additional ingress and egress points? Will there be dedicated lanes or alternative routes designated to prioritize their passage and minimize response times?

Has there been coordination with local emergency service providers to assess the potential impact of the proposed project on emergency response times? What are their recommendations or requirements to ensure that emergency services can operate efficiently despite any traffic delays resulting from the new ingress and egress points?

Will there be any preemption or signal prioritization systems implemented at nearby traffic signals to expedite the passage of emergency vehicles? How will the coordination between emergency services and traffic management systems be facilitated to minimize response time delays?

Are there any plans to provide training or awareness programs to emergency service personnel regarding the changes in traffic patterns resulting from the new ingress and egress points? Will there be ongoing communication channels established between the studio and emergency services to address any operational challenges or adapt to evolving traffic conditions?

How will the potential impact on emergency response times be continuously monitored and evaluated once the additional ingress and egress points are operational? Will there be mechanisms in place to address any unforeseen delays or issues that may arise? If so, what are they?

Ensuring the efficient and timely response of emergency services is crucial for public safety, and I appreciate your attention to this matter. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the measures in place to address the potential impact on emergency response vehicles.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the potential impact on traffic patterns if the Dockweiler Drive extension is never completed. I have concerns regarding the long-term implications and would appreciate your response to the following questions:

If the Dockweiler Drive extension is not completed, what alternative plans or measures are in place to address the traffic flow and transportation needs in the area, especially considering the anticipated increase in traffic associated with the studio campus and any future developments?

Has there been an assessment of the potential traffic impact on nearby roadways and intersections if the Dockweiler Drive extension remains incomplete? What are the projected implications for traffic congestion and travel times?

Are there any plans to divert traffic to alternative routes or implement traffic control measures to alleviate potential congestion if the Dockweiler Drive extension is not available?

How will the absence of the Dockweiler Drive extension affect the surrounding communities, including residents, businesses, and other stakeholders, in terms of traffic flow, accessibility, and quality of life?

Has there been any consideration given to the potential environmental and social impacts of increased traffic and congestion in the absence of the Dockweiler Drive extension?

Are there any plans or discussions in progress to revisit or reevaluate the feasibility and importance of completing the Dockweiler Drive extension if it is currently stalled or facing delays?

Will there be ongoing monitoring and assessment of the traffic patterns and impacts if the Dockweiler Drive extension is not completed? How will any issues or concerns be addressed in the long term?

Are there any initiatives or strategies in place to promote alternative transportation options, such as public transit or carpooling, to mitigate the potential traffic challenges if the Dockweiler Drive extension is not realized?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the potential implications for traffic patterns if the Dockweiler Drive extension is never completed.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the potential impact on traffic patterns if the Dockweiler Drive extension is never completed as part of the proposed Shadowbox Studios project. I would appreciate your response to the following questions:

If the Dockweiler Drive extension is not completed, what alternative plans or measures are in place to address the anticipated increase in traffic associated with the studio campus and its operations?

Has there been an assessment conducted to evaluate the potential consequences of not completing the Dockweiler Drive extension on the surrounding roadways and intersections? What are the projected impacts on traffic flow and congestion in the absence of this extension?

How will the existing road network accommodate the additional traffic generated by the studio campus if the Dockweiler Drive extension is not available? Are there any plans to upgrade or modify existing roads to handle the increased traffic volume?

Will there be any measures implemented to mitigate the potential traffic congestion and address any safety concerns that may arise due to the absence of the Dockweiler Drive extension?

Has the impact on nearby residential areas and local businesses been assessed if the Dockweiler Drive extension is not completed? What steps will be taken to minimize disruptions and inconveniences to the community?

Are there any plans to enhance public transportation options to and from the studio campus to reduce the reliance on personal vehicles and alleviate potential traffic congestion resulting from the incomplete Dockweiler Drive extension?

Will there be ongoing monitoring and evaluation of traffic patterns and congestion levels to identify any areas of concern and implement appropriate mitigation strategies if the extension is not completed?

Has the community been consulted or involved in the decision-making process regarding the completion of the Dockweiler Drive extension? What feedback has been received from residents and local businesses regarding the potential impacts on traffic patterns and how has it influenced the planning commission's considerations?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the potential impact on traffic patterns if the Dockweiler Drive extension is not completed as part of the proposed Shadowbox Studios project.

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the plan in place for addressing railroad emergencies, such as derailments, accidents, malfunctions, suicides, or other incidents, particularly in the absence of the Dockweiler Drive extension. I would appreciate your response to the following questions:

If a railroad emergency were to occur in the vicinity of the studio campus or the surrounding area, what alternative routes or measures are in place to ensure the safe and efficient movement of emergency response vehicles, personnel, and the general public, especially considering the lack of the Dockweiler Drive extension?

Has there been a comprehensive emergency response plan developed that accounts for potential railroad incidents and their impact on traffic flow and accessibility without the availability of the Dockweiler Drive extension?

Will there be designated alternative access points or routes identified for emergency response vehicles to reach the affected areas in a timely manner during a railroad emergency?

Are there any contingency plans or traffic control measures established to redirect traffic and mitigate potential congestion on nearby roadways if the normal routes are affected by a railroad emergency?

How will the coordination and communication between emergency response agencies, law enforcement, and the studio management be ensured during a railroad emergency, considering the potential challenges in accessing and managing traffic flow without the Dockweiler Drive extension?

Has the potential impact on nearby residential areas and local businesses during a railroad emergency been assessed? What steps will be taken to minimize disruptions and ensure the safety of the affected community members?

Are there any plans to enhance public awareness and preparedness regarding railroad emergencies, including the dissemination of information on alternate routes, safety precautions, and evacuation procedures, in the absence of the Dockweiler Drive extension?

Will there be regular drills, exercises, or training sessions conducted involving emergency response agencies to test and evaluate the effectiveness of the emergency response plan without relying on the Dockweiler Drive extension?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the plan in place for addressing railroad emergencies without the Dockweiler Drive extension.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the potential impact of commencing the construction of the Shadowbox Studios project without first completing the Dockweiler Drive extension. I have some concerns regarding the transportation infrastructure and the overall feasibility of the project, and I would appreciate your response to the following questions:

If the Dockweiler Drive extension is not completed prior to the commencement of the studio construction, what alternative routes or access points will be available for construction traffic and future studio operations? Will there be any temporary measures or contingency plans in place to ensure efficient traffic flow during this period?

How will the absence of the Dockweiler Drive extension impact the overall transportation plan for the project? Has there been an assessment of the potential challenges and constraints that may arise due to the delayed completion of this extension?

Will the studio construction and subsequent operations have any adverse effects on the surrounding roadways, considering the absence of the Dockweiler Drive extension? Are there any provisions or mitigations in place to minimize any potential traffic congestion or disruptions?

Has there been any coordination or communication with local authorities and transportation agencies to address the potential traffic impact and find alternative solutions if the Dockweiler Drive extension is not completed as planned?

What are the projected timelines for the completion of the Dockweiler Drive extension? Are there any indications or assurances that this extension will be finished within a reasonable timeframe to align with the construction and operation of the Shadowbox Studios project?

Will there be any measures or requirements imposed on the studio construction to minimize the impact on the existing transportation network and ensure the safety of residents and commuters in the area, considering a delayed completion of the Dockweiler Drive extension?

How will the potential delays in completing the Dockweiler Drive extension be communicated to the public and stakeholders? Will there be regular updates and transparency regarding the progress of this extension and its impact on the studio project?

Has there been any evaluation or contingency plans considered in case the completion of the Dockweiler Drive extension faces significant delays or unforeseen challenges? How will any potential setbacks be addressed to minimize disruptions to the studio construction and operation?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the potential impact of not completing the Dockweiler Drive extension prior to the commencement of the Shadowbox Studios project.

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the potential requirement for an additional ingress and egress to the studio campus. I have some concerns regarding the safety and well-being of the residents of Placerita Canyon, as well as their horses, livestock, and pets, specifically in the context of evacuation during emergency situations. I would appreciate your response to the following questions:

1. Has there been adequate consideration given to the evacuation needs of the residents of Placerita Canyon in the event of an emergency, such as wildfires or natural disasters? Are there established evacuation plans that address the safe and efficient movement of people and their animals out of the area?
2. How could additional ingress and egress points facilitate the evacuation process for the residents of Placerita Canyon? Will there be designated evacuation routes or plans in place to ensure their safe and timely exit from the area?
3. Will there be any specific measures or infrastructure enhancements to accommodate the evacuation of horses, livestock, and pets belonging to the residents of Placerita Canyon during emergency situations?
4. Has the capacity of the proposed evacuation routes been assessed to determine if they can handle the potential increase in traffic volume during an evacuation? Will there be any traffic control measures or coordination with law enforcement agencies to prioritize the safe and swift evacuation of residents?
5. Are there any plans for public awareness campaigns or educational programs to inform residents of Placerita Canyon about evacuation procedures, particularly in relation to the studio's only ingress and egress point? How will the community be kept informed and prepared for emergency situations?
6. Will there be any temporary sheltering or assistance provided for horses, livestock, and pets during the evacuation process? Are there designated facilities or resources in place to accommodate their needs and ensure their safety during an emergency?
7. Has there been any coordination with local animal welfare organizations or emergency response agencies to develop comprehensive plans for the evacuation and care of animals in Placerita Canyon during emergency situations?
8. How will the effectiveness of the evacuation plans and provisions for residents, horses, livestock, and pets be monitored and evaluated? Will there be opportunities for community feedback and input to address any concerns or areas for improvement?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the considerations for the residents of Placerita Canyon, as well as the safety of their horses, livestock, and pets during evacuation emergencies.

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the Dockweiler Drive extension. I have a concern regarding the potential scenario where the construction for both the extension and the studio campus takes place concurrently. I would appreciate your response to the following questions regarding the traffic plan in such a situation:

If the construction for the Dockweiler Drive extension and the studio campus occurs simultaneously, what is the traffic plan to manage the increased construction-related traffic in the area?

Has there been an assessment of the potential impact of concurrent construction on the surrounding roadways and traffic flow? Are there any measures or adjustments planned to minimize congestion and ensure smooth traffic movement?

Will there be designated construction vehicle routes and access points to the studio campus to separate construction traffic from regular commuter traffic?

Are there any plans to implement temporary traffic control measures, such as signage, flaggers, or traffic signals, to regulate the flow of construction-related vehicles and ensure safety for both workers and the general public?

Has there been coordination with local authorities, including law enforcement agencies and transportation departments, to develop and implement the traffic plan for concurrent construction activities?

Will there be regular communication and updates provided to the community and stakeholders regarding the traffic plan during concurrent construction? How will residents and businesses in the surrounding area be informed about any potential disruptions or changes to traffic patterns?

Are there any provisions in place to address any unforeseen issues or challenges that may arise during the concurrent construction, such as adjustments to the traffic plan or additional resources allocated to manage traffic flow?

How will the effectiveness of the traffic plan during concurrent construction be monitored and evaluated? Will there be mechanisms in place to address any concerns or feedback from the community or construction stakeholders?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the traffic plan in the event of concurrent construction for the Dockweiler Drive extension and the studio campus.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the status of the Dockweiler Drive extension. I have a concern regarding the potential scenario where the extension is not completed prior to the commencement of studio construction. I would appreciate your response to the following questions:

What is the current status of the Dockweiler Drive extension project? Has construction started, or are there any delays or challenges that could potentially impede its completion before the studio construction begins?

If the Dockweiler Drive extension is not completed prior to the start of studio construction, what alternative plans or measures are in place to address the potential increase in traffic and transportation needs during the construction phase?

How will the absence of the Dockweiler Drive extension impact the overall traffic flow in the area, considering the anticipated influx of construction-related vehicles and personnel to the studio site?

Are there any contingency plans or alternative routes that can be utilized if the Dockweiler Drive extension is not available during the studio construction? Specifically, what are the alternative access points or roads that will be designated for construction-related traffic?

Will there be any temporary traffic control measures or adjustments to existing roadways to accommodate the construction traffic if the Dockweiler Drive extension is not yet accessible?

Has the potential impact on nearby residential areas and local businesses been assessed if the Dockweiler Drive extension is not completed prior to the studio construction? What steps will be taken to minimize disruptions and inconveniences to the community?

Will there be ongoing coordination and communication between the construction management team and local authorities to address any traffic-related concerns or issues that may arise during the construction phase?

How will the completion of the Dockweiler Drive extension be prioritized to ensure its availability prior to the start of studio grading and construction? Are there any plans or actions in place to expedite its construction if delays occur?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the potential impact of an incomplete Dockweiler Drive extension prior to the commencement of studio construction.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the status of the Dockweiler Drive extension. Specifically, I would like to understand the implications if the extension is not completed prior to the commencement of the studio construction. Please provide information regarding the following:

What is the current status of the Dockweiler Drive extension project? Has construction begun, or are there any delays or challenges that may prevent its completion before the start of the studio construction?

If the Dockweiler Drive extension is not completed prior to the commencement of the studio construction, what alternative plans or measures are in place to mitigate the potential impact on traffic flow, congestion, and accessibility to the proposed studio site and to Placerita Canyon?

How could the potential absence of the Dockweiler Drive extension affect the ingress and egress of construction vehicles, equipment, and personnel to the Shadowbox Studios site? Are there contingency plans to ensure their safe and efficient movement during the construction phase?

Has a traffic management plan been developed in the event that the Dockweiler Drive extension is not available during the studio construction? How will traffic congestion and disruption be minimized in the surrounding area?

What communication strategies will be employed to keep the community informed about any changes or adjustments related to the Dockweiler Drive extension and its impact on traffic patterns and access during the studio construction?

Will there be any temporary measures, such as the provision of alternative access routes or the use of temporary traffic control devices, if the Dockweiler Drive extension is not completed? How will these measures be implemented and monitored to ensure their effectiveness?

Has the potential delay in completing the Dockweiler Drive extension been considered in the overall project timeline for the Shadowbox Studios? Will there be any adjustments made to the construction schedule to account for this potential delay?

What steps are being taken to expedite the completion of the Dockweiler Drive extension to ensure it is available before the studio construction begins? Are there any coordination efforts with relevant agencies or stakeholders to overcome any challenges and ensure timely completion?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the potential implications of the Dockweiler Drive extension not being completed prior to the commencement of the studio construction.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the traffic plan in the event that the construction of the Dockweiler Drive extension and the studio campus are done concurrently. I would appreciate your response to the following questions:

If the construction of the Dockweiler Drive extension and the studio campus were to occur concurrently, what specific measures or plans are in place to manage the resulting increase in construction-related traffic and potential traffic congestion in the surrounding area?

Has there been a comprehensive traffic management plan developed to address the simultaneous construction activities? What strategies will be implemented to ensure the smooth flow of traffic and minimize disruptions to the surrounding roadways?

Will there be designated construction entrances and exits separate from the regular access points for the studio campus to ensure the efficient movement of construction vehicles and personnel?

How will the safety of both construction workers and the general public be ensured during this concurrent construction period? Are there any traffic control measures or signage planned to alert drivers to the construction activities and ensure their safety?

Have traffic impact assessments been conducted to evaluate the potential effects of concurrent construction on nearby intersections, roadways, and surrounding communities? How will the findings of these assessments inform the development and implementation of the traffic management plan?

Will there be regular communication and coordination between the construction management team, the studio operators, and local authorities to address any traffic-related issues or concerns that may arise during the concurrent construction period?

Are there any specific provisions or plans to enhance public transportation options during this period to reduce the number of vehicles on the road and alleviate potential congestion associated with the construction activities?

How will the effectiveness of the traffic management plan be monitored and evaluated during the concurrent construction period? Will there be mechanisms in place to address any unforeseen issues or make necessary adjustments to ensure the smooth flow of traffic?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the traffic plan in the event that the construction of the Dockweiler Drive extension and the studio campus is done concurrently.

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the potential impact of increased commuter train frequency once the double tracking is installed in the area. I am interested in understanding the implications of this change and would appreciate your response to the following questions:

With the implementation of double tracking, what is the projected increase in commuter train frequency compared to the current schedule? Will there be a significant rise in the number of trains passing through the area on a daily basis?

Has there been a comprehensive assessment conducted to evaluate the potential impact of increased commuter train frequency on the surrounding roadways, intersections, and traffic flow? What are the projected implications for traffic congestion, travel times, and overall transportation efficiency?

Will the increased commuter train frequency require any modifications or enhancements to the existing transportation infrastructure, such as additional railway crossings, signal systems, or other safety measures, to accommodate the higher volume of train traffic?

Have there been any studies conducted to assess the potential noise and vibration effects resulting from the increased commuter train frequency on nearby residential areas? How will any identified impacts be mitigated or addressed to minimize disturbances to the community?

Will the increased frequency of commuter trains have any implications for the accessibility and safety of pedestrians, cyclists, and other non-motorized transportation users in the vicinity of railway crossings? Are there plans to enhance safety measures or implement any changes to accommodate these modes of transportation?

How will the increased commuter train frequency be communicated to the public to ensure awareness and preparedness, especially for those who utilize nearby roadways and intersections? Will there be initiatives to educate the community on train schedules, potential delays, and any changes in transportation patterns?

Has there been coordination and consultation with local transportation authorities, law enforcement agencies, and other relevant stakeholders to address any concerns or challenges related to the increased commuter train frequency?

Will there be ongoing monitoring and evaluation of the impacts of the increased commuter train frequency once the double tracking is implemented? How will any identified issues be addressed or mitigated as needed?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the potential impact of increased commuter train frequency once the double tracking is installed.

Dear Santa Clarita Planning Commission,

I am writing to inquire about the impact of the increased frequency of commuter trains once the double tracking is installed in the area. I would appreciate your response to the following questions:

With the implementation of double tracking, what is the anticipated increase in the frequency of commuter trains passing through the area?

Has a comprehensive analysis been conducted to assess the potential impact of the increased frequency of commuter trains on local road traffic, specifically at railway crossings and intersections?

What measures or plans are in place to address any potential disruptions or delays to road traffic caused by the increased frequency of trains?

Will there be any modifications or enhancements made to railway crossings or intersections to accommodate the increased train frequency and ensure the safe and efficient movement of both vehicular and pedestrian traffic?

Has the impact on nearby residential areas, businesses, and community facilities been evaluated in terms of noise, vibrations, and any other potential disturbances resulting from the increased frequency of commuter trains?

Will there be ongoing monitoring of the train operations and their impact on traffic patterns to identify and address any unforeseen issues that may arise after the double tracking is completed?

Are there any plans to improve public awareness and education regarding the increased train frequency, including information on safety precautions, railway crossing procedures, and potential changes to travel times?

How will the double tracking and increased frequency of commuter trains align with the overall transportation infrastructure plan for the Santa Clarita area? Does it complement existing transit systems and contribute to the improvement of regional connectivity?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the impact of the increased frequency of commuter trains once the double tracking is installed.

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the feasibility of establishing a secondary entrance from Circle J for the north parking lot of the proposed Shadowbox Studios. Such an entrance could potentially alleviate congestion at the Arch and 13th intersection by redirecting approximately 1,100 vehicles on a daily basis. I would like to know if this option is currently being considered, and if not, I kindly request the Planning Commission's attention to this matter. Please provide clarification on the following:

Has there been any evaluation or consideration given to the feasibility of creating a secondary entrance from Circle J for the north parking lot of the Shadowbox Studios? This alternative entrance could help alleviate traffic congestion at the Arch and 13th intersection by redirecting a significant number of vehicles.

What factors have been taken into account when determining whether to implement a secondary entrance from Circle J? Are there any specific challenges or limitations associated with this option that have been identified during the planning process?

If the secondary entrance from Circle J has not been considered thus far, would the Planning Commission be willing to evaluate this option now? Given the potential benefits in terms of traffic mitigation, would the Commission be open to exploring the feasibility and impact of a secondary entrance as an alternative solution?

How would the implementation of a secondary entrance from Circle J affect the overall transportation infrastructure plan for the Santa Clarita area? Are there any anticipated benefits or drawbacks in terms of traffic flow, road capacity, or impact on adjacent neighborhoods that need to be considered?

If the secondary entrance from Circle J is deemed feasible and desirable, what steps would be taken to ensure its safe and efficient implementation? Are there any provisions or conditions that would need to be put in place to address any potential challenges or concerns related to the new entrance?

I appreciate your attention to these questions. Clarifying the feasibility and potential consideration of a secondary entrance from Circle J for the north parking lot of the Shadowbox Studios project will provide valuable insights into the efforts being made to address traffic congestion and improve transportation infrastructure in the Santa Clarita area.

Thank you for your time and consideration.

Sincerely,

Name: E. Caballero

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to ask about the feasibility of establishing a secondary entrance from Circle J for the north parking lot of the proposed Shadowbox Studios project. This potential alternative access point could alleviate congestion and reduce the number of vehicles using the Arch and 13th intersection by diverting approximately 1,100 vehicles. I kindly request your insights and clarification regarding the consideration of this option:

Has the feasibility of a secondary entrance from Circle J for the north parking lot been evaluated as a potential solution to alleviate congestion at the Arch and 13th intersection? If so, what were the main considerations and findings of this evaluation? If not, would the planning commission be open to considering this option now?

Are there any specific challenges or constraints that would hinder the establishment of a secondary entrance from Circle J? Factors such as land availability, infrastructure requirements, zoning regulations, and the overall impact on the surrounding area need to be taken into account.

Access to Circle J would not necessitate traversing an active rail crossing? Has the PUC been contacted that this would be an option to minimize vehicular accidents involving the tracks?

What level of coordination and collaboration has taken place between the project developers, transportation experts, and the planning commission to explore alternative access options and evaluate their feasibility? Has the potential for a secondary entrance from Circle J been discussed in previous meetings or planning stages? If not, could it be added as a condition of approval?

If a secondary entrance from Circle J is deemed feasible, what measures would be taken to ensure its safe and efficient operation? How would the traffic flow be managed, and what impact would it have on the surrounding road network and nearby residential areas?

Has the community been consulted or involved in discussions regarding the potential for a secondary entrance from Circle J? Many residents from Circle J have spoken in favor of the studio project, so there is support already in place. Have there been any public forums or consultations to gather feedback and assess the level of support from residents and other stakeholders?

Considering the potential benefits in terms of traffic reduction and improved intersection functionality, I believe it is crucial to explore all viable options for mitigating congestion. I appreciate your attention to this matter and look forward to your insights and clarification on the feasibility of a secondary entrance from Circle J for the north parking lot of the Shadowbox Studios project.

Sincerely,

Name: Isiah Marick

Address: 24413 Leonard Tree Ln. #204

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the possibility of the planning commission adopting Alternative #3 with modifications to address the inclusion of at least one additional ingress/egress gate that does not feed into Placerita Canyon. I would appreciate your insights and response to the following questions:

What specific modifications are being considered for Alternative #3 to accommodate the inclusion of an additional ingress/egress gate that does not rely on Placerita Canyon? How would these modifications ensure efficient traffic flow, minimize impacts on Placerita Canyon, and enhance accessibility to the studio campus?

How would the location of the additional ingress/egress gate be determined? What factors, such as proximity to major roadways, existing infrastructure, and potential impacts on surrounding neighborhoods, would be taken into account when selecting the suitable location?

Has a thorough analysis been conducted to assess the potential traffic impacts and benefits of including an additional ingress/egress gate that does not rely on Placerita Canyon? What were the findings of this analysis, particularly in terms of traffic distribution, congestion mitigation, and overall transportation efficiency?

How would the inclusion of an additional ingress/egress gate align with the existing transportation infrastructure plan for the Santa Clarita area? Would it complement the current traffic patterns and roadways, or would it necessitate significant modifications or enhancements to the surrounding transportation network?

In considering the modification to Alternative #3, what measures will be taken to ensure that the design and operation of the additional ingress/egress gate prioritize the safety of both studio personnel and the general public? Will traffic control measures, signage, and appropriate infrastructure be implemented to minimize potential traffic congestion and maximize safety?

Has the community been consulted or involved in the decision-making process regarding the inclusion of an additional ingress/egress gate? If so, what feedback has been received from residents and local businesses, and how has it influenced the planning commission's considerations?

Are there any alternative solutions or approaches that have been explored to address the need for an additional ingress/egress gate? If so, what were these alternatives, and why were they not deemed suitable for the project?

How would the effectiveness and impact of the modifications, including the additional ingress/egress gate, be monitored and evaluated once implemented? Will there be mechanisms in place to address any unforeseen issues or make adjustments if needed?

Thank you for your attention to these questions. I greatly appreciate your insights and clarification regarding the possibility of adopting Alternative #3 with modifications to address at least one additional ingress/egress gate that does not feed into Placerita Canyon.

Sincerely,

Name: Jacqueline Hernandez

Address: 13415 Eustace st Pacoima, CA 91331

MASTER CASE NO: 21-109

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the possibility of the planning commission adopting Alternative #3 with modifications that address the inclusion of at least one additional ingress/egress gate that does not feed into Placerita Canyon. I would appreciate your insights and response to the following questions:

What specific modifications are being considered to Alternative #3 to accommodate the inclusion of an additional ingress/egress gate that does not rely on Placerita Canyon? How would these modifications address concerns related to traffic flow, community access, and potential impacts on Placerita Canyon's residential area?

How would the planning commission ensure that the proposed additional ingress/egress gate is strategically located and designed to minimize potential traffic congestion and maximize safety for both studio personnel and the surrounding community? What factors, such as proximity to major roadways or existing transportation infrastructure, would be taken into account during the selection process?

Has there been any consideration given to the potential impacts of the additional ingress/egress gate on the surrounding road network, including the capacity and efficiency of adjacent intersections or road segments? Will there be an additional comprehensive traffic impact analysis conducted to assess the effects and determine any necessary mitigation measures?

How would the inclusion of an additional ingress/egress gate that does not feed into Placerita Canyon align with the overall transportation infrastructure plan for the Santa Clarita area? Would it complement existing traffic patterns and roadways, or would it necessitate significant modifications to the surrounding transportation network?

What measures would be implemented to ensure that the additional ingress/egress gate is adequately integrated into the studio's transportation management plan, including provisions for traffic control, emergency access, and the efficient movement of vehicles during peak periods?

Has the community been consulted or involved in the decision-making process regarding the inclusion of an additional ingress/egress gate? If so, what feedback has been received from residents and local businesses, and how has it influenced the planning commission's considerations?

How would the effectiveness and impact of the modified Alternative #3, including the additional ingress/egress gate, be monitored and evaluated once implemented? Will there be mechanisms in place to address any unforeseen issues or make adjustments if needed?

I appreciate your attention to these questions and your efforts to consider modifications to Alternative #3 that would address the inclusion of at least one additional ingress/egress gate outside of Placerita Canyon. Thank you for your commitment to addressing traffic concerns and ensuring the safety and well-being of the surrounding community.

Sincerely,

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to further inquire about the potential requirement for the studio project to make a cash donation to the Placerita Canyon Property Owners Association (PCPOA) as a condition of approval, with the intention of furthering preservation efforts within the canyon. I appreciate your response to the following question:

Has there been any consideration given to requiring the studio project to make a cash donation to the Placerita Canyon Property Owners Association (PCPOA) as a condition of approval? If so, I would like to understand the specific factors and considerations that would be taken into account when determining the amount of the donation and how it would be utilized to benefit the preservation efforts within the canyon.

a) How would the amount of the cash donation be determined? Would it be based on a percentage of the project's budget, a fixed amount, or other criteria? What mechanisms or methodologies would be employed to ensure a fair and appropriate contribution from the studio project?

b) What specific preservation initiatives or projects would be supported by the cash donation? Would the funds be directed towards protecting and enhancing the natural, environmental, and cultural resources within Placerita Canyon?

c) How would the Placerita Canyon Property Owners Association (PCPOA) be involved in the decision-making process regarding the allocation and utilization of the cash donation? Would there be transparency and accountability measures in place to ensure that the funds are used effectively and in alignment with the goals of the PCPOA and the broader community?

d) Would there be any provisions or agreements in place to monitor and evaluate the impact of the cash donation on the preservation efforts within Placerita Canyon? How would the success and effectiveness of the initiatives funded by the donation be assessed and reported?

e) In the event that the studio project expands or undergoes modifications in the future, would there be a possibility for the cash donation requirement to be reevaluated or adjusted to reflect the increased scope and impact of the project on the canyon and its preservation needs?

I appreciate your attention to these questions and the opportunity to gain further insights into the potential requirement for a cash donation to the Placerita Canyon Property Owners Association as a condition of approval for the studio project. Thank you for your efforts to balance development with the preservation of this cherished natural and historic resource.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to further discuss the possibility of considering a double lane roundabout as a potential compromise solution for the intersection of Dockweiler Drive, Arch Street, and 12th Street, taking into account the fact that the city of Santa Clarita has not yet adopted a standard for roundabouts. I would appreciate your insights and response to the following questions:

1. Considering the unique circumstances and absence of a roundabout standard, what specific considerations would need to be taken into account when evaluating the feasibility and potential benefits of a double lane roundabout at the intersection of Dockweiler Drive, Arch Street, and 12th Street? How would factors such as traffic flow, safety, road capacity, and community preferences be balanced in the decision-making process?
2. Are there any existing examples or precedents of double lane roundabouts in neighboring jurisdictions that could serve as a reference for evaluating their suitability and effectiveness? What insights could be gained from studying the experiences and outcomes of similar double lane roundabouts in terms of traffic management, safety improvements, and overall satisfaction?
3. In light of the specific characteristics and needs of the intersection at Dockweiler Drive, Arch Street, and 12th Street, what advantages might a double lane roundabout offer over alternative solutions, such as signalized intersections or other intersection designs? How would the inclusion of an additional lane address concerns related to traffic congestion, efficient movement of vehicles, and potential future growth in the area?
4. What potential challenges or limitations might arise in implementing a double lane roundabout at this particular location? Are there any constraints, such as land availability, right-of-way considerations, or existing infrastructure, that would need to be carefully evaluated and addressed to ensure a successful implementation?
5. Given the potential introduction of a new intersection design concept, how would the public and road users be educated and informed about the safe usage and proper navigation of a double lane roundabout? What strategies or initiatives could be employed to ensure widespread awareness and understanding of double lane roundabout rules, yielding protocols, and pedestrian/cyclist considerations?
6. To thoroughly assess the feasibility and impacts of a double lane roundabout, what additional studies, evaluations, or expert consultations might be necessary? How would community input and stakeholder feedback be incorporated into the decision-making process, considering the importance of balancing the interests of residents and the studio?

Thank you for your attention to these additional questions. I greatly appreciate your insights and clarification regarding the feasibility and potential considerations of a double lane roundabout as a compromise solution for the intersection of Dockweiler Drive, Arch Street, and 12th Street, given the absence of a roundabout standard in the city of Santa Clarita.

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to further inquire about the feasibility of establishing a secondary entrance from Circle J for the north parking lot of the proposed Shadowbox Studios project. Additionally, I would like to explore the potential for incorporating the flyover Via Princessa bridge into the transportation infrastructure plan. This combination of solutions could help alleviate traffic congestion at the Arch and 13th intersection and provide improved access to the studio campus. I kindly request your insights and clarification on the following matters:

Has there been any comprehensive assessment or consideration given to the feasibility of a secondary entrance from Circle J for the north parking lot of the Shadowbox Studios project, in conjunction with a flyover Via Princessa bridge? This combination could effectively divert approximately 1,100 vehicles from the Arch and 13th intersection and improve traffic flow in the Placerita Canyon area.

What are the potential benefits and challenges associated with establishing a secondary entrance from Circle J and incorporating a flyover Via Princessa bridge? Are there any specific technical, engineering, or regulatory factors that need to be taken into account during the planning and implementation stages?

Have traffic impact studies or assessments been conducted to evaluate the potential effects of diverting traffic through a secondary entrance from Circle J and the integration of a flyover Via Princessa bridge? If so, what were the findings of these studies, and how were they considered in the planning process? If not, will it be done prior to approval?

How would the establishment of a secondary entrance from Circle J and the inclusion of a flyover Via Princessa bridge align with the broader transportation infrastructure plan for the Santa Clarita area? Would these solutions complement existing traffic patterns and roadways, or would they necessitate significant modifications to the surrounding transportation network?

Are there any alternative proposals or potential solutions that have been evaluated to address the traffic concerns at the Arch and 13th intersection, considering the establishment of a secondary entrance from Circle J and the integration of a flyover Via Princessa bridge? What were the main considerations and reasons for either pursuing or not pursuing those alternatives?

What level of coordination and collaboration is taking place between the relevant stakeholders, such as the City of Santa Clarita, transportation authorities, and the planning commission, to explore and evaluate the feasibility of a secondary entrance from Circle J and a flyover Via Princessa bridge?

If these solutions are not currently being considered, would the planning commission be open to reevaluating the options in light of their potential to alleviate traffic congestion, enhance traffic flow, and provide improved access to the Shadowbox Studios project?

Thank you for your attention to these expanded questions. Your insights and clarification regarding the feasibility of a secondary entrance from Circle J, in conjunction with a flyover Via Princessa bridge, will provide valuable information for addressing traffic concerns and enhancing transportation infrastructure in the Santa Clarita area.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my concern regarding the limited discussion surrounding the adoption of Alternative #3, which offers a 24% reduction in size and is considered the environmentally superior alternative. I would appreciate your insights and response to the following question:

Why has there been minimal discussion regarding the adoption of Alternative #3, despite its significant environmental benefits and reduction in size compared to other alternatives? What factors have influenced the limited attention given to this alternative during the planning process?

Has there been a comprehensive assessment of the environmental impacts associated with each alternative, including Alternative #3, to inform the decision-making process? If so, what were the findings of this assessment, and how have they been taken into account when considering the adoption of Alternative #3?

What opportunities have been provided for public input and engagement to ensure that the community's concerns and perspectives are taken into consideration regarding the possible adoption of Alternative #3? Have there been any specific reasons why the community's input on this alternative has not been extensively discussed?

Are there any perceived challenges or obstacles in implementing Alternative #3 that have hindered its thorough discussion and consideration? If so, what are these challenges, and are there any plans in place to address them?

How can the planning commission ensure that the adoption of Alternative #3, as the environmentally superior alternative, receives the necessary attention and consideration during the decision-making process? What steps can be taken to ensure that the community's interests, environmental concerns, and overall sustainability objectives are given due weight in the decision?

I appreciate your attention to these questions and look forward to your insights and clarification regarding the limited discussion surrounding the adoption of Alternative #3, despite its recognized environmental superiority. Thank you for your efforts to prioritize sustainable and environmentally conscious development.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I have some inquiries regarding the removal and relocation of oak trees from the proposed Shadowbox Studios project site. I kindly request your insights and responses to the following questions:

How many oak trees are currently located on the project site, and what is the proposed plan for their removal or relocation? Will any efforts be made to minimize the impact on these oak trees during the construction process?

Has an arborist or environmental expert assessed the health and viability of the oak trees on the project site? Will any measures be taken to preserve or protect healthy and significant oak trees that contribute to the ecological value and aesthetic appeal of the area?

Are there plans for the relocation of any oak trees that need to be removed from the project site? If so, what criteria will be used to determine which trees are suitable for relocation, and where will they be relocated to? Will adequate measures be taken to ensure their successful transplanting and survival?

Will there be a tree mitigation plan in place to compensate for the removal of oak trees? If so, what measures will be taken to ensure that the replacement trees are of a similar size, species, and ecological value as those being removed?

How will the removal or relocation of oak trees be coordinated with other aspects of the project, such as grading, infrastructure development, and construction timelines? Will there be efforts to minimize disturbance to the root systems and surrounding ecosystem during the process?

Has there been consultation or involvement of relevant agencies, such as the California Department of Forestry and Fire Protection (CAL FIRE) or local environmental organizations, to ensure compliance with regulations and best practices for the preservation and management of oak trees?

Are there any long-term plans or commitments to plant new oak trees or undertake restoration efforts to enhance the presence of oak woodlands in the vicinity of the Shadowbox Studios project? How will the project contribute to the overall conservation and enhancement of oak tree populations in the region?

I appreciate your attention to these questions and your dedication to the preservation and responsible management of oak trees within the project site. Your insights will contribute to a well-informed decision-making process and ensure the protection of our valuable natural resources.

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my concern regarding the limited discussion surrounding the adoption of Alternative #3, despite its significant environmental advantages, including a 24% reduction in size. I would appreciate your insights and response to the following question:

Why has there been relatively little discussion or consideration given to the adoption of Alternative #3, which is deemed the environmentally superior alternative? What factors or reasons have contributed to the limited attention and exploration of this option during the planning process?

a) Has there been any particular challenge or obstacle that has hindered the broader discussion and evaluation of Alternative #3's environmental benefits and its potential positive impact on the surrounding area?

b) What steps will the planning commission take to ensure that there is a comprehensive and inclusive discussion regarding Alternative #3, allowing for the exploration of its environmental advantages and potential solutions to any identified challenges or concerns?

c) Has the planning commission sought input from environmental experts or conducted an independent assessment of the environmental benefits of Alternative #3? If so, what were the findings of these assessments, and how have they been taken into account during the decision-making process?

d) Are there any plans or strategies in place to actively promote the understanding and awareness of Alternative #3 among the public, stakeholders, and interested parties? How will the planning commission ensure that the broader community has access to information and opportunities to provide feedback on this environmentally superior alternative?

e) What measures will be taken to ensure that the decision-making process regarding the possible adoption of Alternative #3 is transparent, fair, and well-informed? How will the planning commission address any concerns or skepticism regarding the limited discussion surrounding this environmentally advantageous option?

I appreciate your attention to these concerns and the opportunity to gain further insights into the limited discussion surrounding the adoption of Alternative #3 despite its environmentally superior status. Thank you for your efforts in considering the environmental impact of the proposed project and ensuring a comprehensive and inclusive planning process.

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to further inquire about the potential feasibility and considerations of implementing a double lane roundabout as a compromise solution for the intersection of Dockweiler Drive, Arch Street, and 12th Street, especially considering that the city of Santa Clarita has not yet adopted a standard for roundabouts. I would appreciate your response to the following questions:

What potential advantages would a double lane roundabout offer at the intersection in terms of addressing the concerns of both residents and the studio? How could it potentially improve traffic flow, enhance safety, and accommodate the anticipated traffic volumes associated with the Shadowbox Studios project?

Considering that a double lane roundabout may be a less common design in the area due to the absence of a standard, are there any specific challenges or considerations that would need to be addressed to ensure its successful implementation? What potential modifications or adjustments would need to be made to accommodate the double lane configuration in terms of road layout, signage, and markings?

Has there been any analysis or comparison conducted between single lane and double lane roundabouts in terms of their suitability and performance at intersections with similar characteristics to the Dockweiler Drive, Arch Street, and 12th Street intersection? Are there any lessons learned or best practices from other jurisdictions or studies that could inform the decision-making process regarding the potential use of a double lane roundabout in this context?

How would the introduction of a double lane roundabout at this intersection align with the city's broader transportation and infrastructure plans? Would it complement existing roadways and traffic patterns, or would it necessitate significant modifications or adjustments to the surrounding transportation network?

What potential considerations should be taken into account regarding pedestrian, equestrian, and cyclist safety when considering a double lane roundabout? How could the design and layout of the roundabout be optimized to ensure safe and convenient passage for all users, including provisions for crosswalks, bike lanes, horse trail, and appropriate signage?

Are there any potential impacts, either positive or negative, on nearby properties or businesses that would need to be considered when evaluating the feasibility of a double lane roundabout? How would these impacts be mitigated or addressed to ensure a harmonious coexistence between the roundabout and the surrounding community?

Thank you for your attention to these additional questions. I greatly appreciate your insights and clarification regarding the feasibility and potential considerations of implementing a double lane roundabout as a compromise solution for the intersection of Dockweiler Drive, Arch Street, and 12th Street in the absence of an adopted roundabout standard in the city of Santa Clarita.

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my support for the adoption of Alternative #3. Its designation as the environmentally superior alternative with a significant reduction in size is worthy of your consideration. I would appreciate your insights and response to the following question:

Could you please elaborate on why there has been so little discussion regarding the adoption of Alternative #3, considering its designation as the environmentally superior alternative and its substantial reduction in size compared to other alternatives? What factors have contributed to the limited exploration and consideration of this option?

Additionally, I would like to understand the following:

What steps have been taken to ensure that the environmental benefits and reduced footprint of Alternative #3 are adequately recognized and given appropriate weight in the decision-making process? How has the planning commission balanced the environmental considerations with other relevant factors in evaluating the proposed studio project?

Has there been an assessment of the potential environmental impacts associated with the full size project under consideration? How does this compare to Alternative #3 in terms of their environmental effects, such as habitat disturbance, water usage, energy consumption, and overall ecological footprint?

What efforts have been made to gather public input and community feedback specifically on Alternative #3 and its environmental advantages? Have there been opportunities for residents, environmental experts, and other stakeholders to voice their opinions and concerns regarding the adoption of this alternative?

Are there any specific plans or strategies in place to ensure that the environmental benefits of Alternative #3 are maximized during the implementation and operation of the studio project should you require that alternative in your approval? How will adherence to environmentally friendly practices and mitigation measures be monitored and enforced?

Given the environmentally superior status of Alternative #3, what steps will be taken to educate the public and stakeholders about its merits and the rationale behind its adoption? How will the planning commission communicate and justify the decision to prioritize environmental considerations in the approval process?

I appreciate your attention to these questions and the opportunity to gain further insights into the limited discussion surrounding the adoption of Alternative #3, despite its designation as the environmentally superior alternative. Thank you for your commitment to considering the environmental impact of the proposed studio project.ank you for your efforts to prioritize sustainable and environmentally conscious development.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing this letter to express my conditional support for the adoption of Alternative #3 for the Shadowbox Studios project. As a concerned resident of the Santa Clarita community, I believe that Alternative #3 presents a balanced and environmentally superior approach that aligns with the vision and values of our community. I would like to highlight several key reasons for endorsing this alternative:

Environmental Conservation: Alternative #3, with its 24% reduction in size, represents a significant step towards minimizing the ecological footprint of the studio project. By reducing the development's impact on sensitive habitats and natural resources, this alternative demonstrates a commitment to environmental conservation, which is crucial for preserving the beauty and integrity of our region.

Traffic Management: The adoption of Alternative #3 can alleviate concerns about increased traffic congestion and its associated impacts. With its smaller size and thoughtful design, this alternative allows for better traffic flow management, reducing the potential burden on local roadways and mitigating disruptions to nearby residential areas.

Community Compatibility: Alternative #3 strikes a balance between the needs of the studio project and the surrounding community. By reducing the scale of the development, this alternative helps to preserve the character of our neighborhoods and maintain the quality of life enjoyed by Santa Clarita residents. It ensures that the project integrates seamlessly with the existing urban fabric and minimizes potential disruptions.

Environmental Stewardship: The adoption of Alternative #3 reflects a commitment to being good stewards of our environment. By embracing a smaller footprint, this alternative demonstrates an understanding of the importance of sustainability and responsible development practices. It sets a positive precedent for future projects in our community, promoting a culture of environmental consciousness.

Public Support: As an engaged member of the community, I have witnessed widespread support for Alternative #3 among fellow residents, community organizations, and environmental advocates. This alternative resonates with the shared values of our community and enjoys significant public backing, reflecting a desire for sustainable and harmonious development.

In conclusion, I strongly urge the Santa Clarita Planning Commission to adopt Alternative #3 for the Shadowbox Studios project. Its reduced size, environmental benefits, and closer compatibility with the community make it a clear choice that aligns with the long-term vision and well-being of our city. I believe that by selecting Alternative #3, we can strike a balance between economic growth and environmental responsibility, ensuring a sustainable future for Santa Clarita.

Thank you for your careful consideration of this matter. I trust that you will take into account the voices of concerned residents and the overall benefits that Alternative #3 offows to our community and environment. Should you require any further information or have any questions, please do not hesitate to contact me.

Sincerely,

Name: Monica Candelaria

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my support for Alternative #3 as the preferred option for the proposed Shadowbox Studios Project. I believe that Alternative #3 offers numerous benefits and aligns well with the goals of environmental sustainability, community welfare, and responsible development. I urge the planning commission to carefully consider and ultimately select Alternative #3 as the approved option for this project.

Alternative #3, with its 24% reduction in size compared to other alternatives, demonstrates a commendable commitment to minimizing the environmental footprint of the studio project. This reduction in size would help preserve and protect the natural resources, wildlife habitats, and scenic beauty of the surrounding area, including the cherished Placerita Canyon. By adopting Alternative #3, the planning commission would showcase the city's dedication to responsible land use and the preservation of its unique natural assets.

Furthermore, Alternative #3 holds the potential to minimize traffic congestion and reduce the impact on the existing roadways and transportation infrastructure. With thoughtful planning and implementation, the addition of at least one additional ingress/egress gate that does not feed into Placerita Canyon, as part of Alternative #3, can improve traffic flow and enhance safety for both studio personnel and the community.

I also appreciate that Alternative #3 has been identified as the environmentally superior alternative. This designation signifies that the selected option aligns with the city's environmental goals, including reducing greenhouse gas emissions, conserving water resources, and mitigating ecological impacts. By adopting Alternative #3, the planning commission would send a strong message of commitment to sustainability and set a positive example for future development projects in the area.

In conclusion, I firmly believe that Alternative #3 is the most responsible, environmentally conscious, and community-oriented option for the Shadowbox Studios Project. Its reduced size, improved traffic flow, and alignment with environmental goals make it the clear choice. I trust that the planning commission will carefully consider these factors and make a decision that benefits both the current and future residents of Santa Clarita.

Thank you for your attention to this matter, and I appreciate your efforts in evaluating the alternatives for the Shadowbox Studios Project. I have full confidence that the planning commission will make a well-informed decision that upholds the values of sustainability, community welfare, and responsible development.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my support for the adoption of Alternative #3 for the Shadowbox Studios project. As a resident of Santa Clarita, I believe that Alternative #3 offers a balanced and environmentally conscious approach that aligns with the values and aspirations of our community.

Alternative #3, with its 24% reduction in size, demonstrates a commitment to environmental preservation, sustainable development and community preservation. By minimizing the project's footprint, this alternative reduces the potential impact on sensitive habitats, natural resources, and wildlife. It reflects a responsible approach to development that prioritizes the long-term health of our ecosystem.

Moreover, adopting Alternative #3 will help alleviate concerns regarding increased traffic congestion. With a smaller scale, this alternative allows for better traffic flow management and minimizes potential disruptions to surrounding neighborhoods. By considering the impact on local roadways and implementing thoughtful design, we can ensure that the project integrates harmoniously with the existing transportation infrastructure.

I appreciate the careful deliberation and analysis that the Planning Commission has undertaken in evaluating the various alternatives. It is my belief that Alternative #3 strikes the right balance between economic growth and community well-being. By adopting this alternative, we can demonstrate our commitment to sustainable development practices and showcase Santa Clarita as a responsible and forward-thinking city.

I kindly request that the Planning Commission carefully consider the merits of Alternative #3 and the widespread community support it has garnered. This alternative has resonated with residents, community organizations, and environmental advocates, who see it as a crucial step towards a sustainable future for our city.

Thank you for your dedication to the well-being of Santa Clarita and your consideration of Alternative #3 for the Shadowbox Studios project. I trust that you will make a decision that reflects the values and aspirations of our community.

Sincerely,

Name: Jay Ng

Address: 21055 Rotunda Rd.

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my support for the adoption of Alternative #3 for the Shadowbox Studios project. As an active member of the Santa Clarita community, I believe that Alternative #3 represents the best choice for our city and its future development. I would like to share my reasons for endorsing this alternative:

Environmental Considerations: Alternative #3 offers a significant reduction in the size of the studio project. This reduction is crucial for preserving our natural resources, protecting sensitive habitats, and maintaining the ecological balance of our region. By prioritizing environmental conservation, we can ensure a sustainable and thriving community for future generations.

Traffic Management: The smaller scale of Alternative #3 presents an opportunity to better manage traffic flow and mitigate congestion issues. With thoughtful design and consideration, this alternative can minimize disruptions to local roadways and alleviate concerns about increased traffic in surrounding residential areas. It is crucial to prioritize the smooth and efficient movement of vehicles while maintaining the safety of pedestrians and cyclists.

Community Compatibility: Alternative #3 strikes a balance between the needs of the studio project and the interests of our community. By reducing the size of the development, this alternative preserves the character and integrity of our neighborhoods. It respects the concerns of local residents, ensures the project's compatibility with the existing urban fabric, and minimizes potential disruptions during the construction and operation phases.

Sustainable Growth: The adoption of Alternative #3 demonstrates a commitment to responsible and sustainable development practices. By embracing a smaller footprint, we prioritize the long-term health and vitality of our city. This alternative sets a positive example for future projects and reinforces our commitment to being good stewards of our environment.

Public Support: Alternative #3 has garnered strong support from community members, local organizations, and environmental advocates. It reflects the shared values and aspirations of Santa Clarita residents who seek a sustainable and harmonious balance between economic growth and environmental responsibility. By choosing Alternative #3, we honor the voices of our community and demonstrate our commitment to listening and responding to the concerns of our residents.

I kindly request the Santa Clarita Planning Commission to carefully consider the merits of Alternative #3 in the decision-making process for the Shadowbox Studios project. Its environmental benefits, traffic management potential, compatibility with our community, and support from residents make it a clear choice for a sustainable future for Santa Clarita.

Thank you for your time and consideration. I trust that you will take into account the opinions and desires of the community, and make a decision that will benefit our city in the long run. If you require any further information or have any questions, please do not hesitate to reach out to me.

Sincerely,

Name: Garrett Martin

Address: 23470 N Carlton Ave

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I have several questions regarding the aesthetics of the proposed Shadowbox Studios project and its compatibility with the rural and equestrian character of the Placerita Canyon community. I kindly request your insights and responses to the following:

Has there been a thorough analysis conducted to assess the visual impact of the Shadowbox Studios project on the surrounding area? How will the proposed design, architecture, and landscaping of the studios contribute to or detract from the existing aesthetics of Placerita Canyon?

What measures will be taken to ensure that the design of the studios complements the rural and equestrian character of Placerita Canyon? Will the materials, colors, and architectural styles be chosen to blend harmoniously with the existing structures and natural surroundings?

Are there any specific design guidelines or requirements in place to maintain the visual integrity of the Placerita Canyon community? How will the studios be designed to respect and enhance the scenic qualities and heritage of the area?

Will there be provisions for landscape buffering or visual screening to minimize the visual impact of the studios on neighboring properties and public view corridors? How will these measures be implemented and maintained throughout the project's lifespan?

Has there been consultation or involvement of local residents, community organizations, or design professionals to gather input on the aesthetics of the studios and their compatibility with the Placerita Canyon community? How have these perspectives influenced the planning commission's considerations and decision-making process?

Are there any plans or commitments to incorporate public art installations or other creative elements within the studios or their immediate surroundings? How will these elements enhance the visual appeal and cultural significance of the project while respecting the unique character of Placerita Canyon?

Will there be any efforts to minimize light pollution and glare from the studios to preserve the dark sky conditions in Placerita Canyon? How will outdoor lighting be designed and managed to ensure it does not negatively impact the nocturnal environment or the rural ambiance of the community?

I appreciate your attention to these questions and your dedication to maintaining the aesthetics and character of the Placerita Canyon community. Your insights will contribute to a well-planned and visually appealing development that respects and enhances the unique qualities of our beloved community.

Sincerely,

Name: Kat Graies

Address: 27484 Mulberry Ct, Santa Clarita CA 91350

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I have some inquiries regarding the aesthetics of the proposed Shadowbox Studios project and its compatibility with the rural and equestrian character of the Placerita Canyon community. I kindly request your insights and responses to the following questions:

How will the design of Shadowbox Studios incorporate elements that complement the existing rural and equestrian character of Placerita Canyon? Are there plans to incorporate architectural features, landscaping, or other design elements that work with the natural surroundings and the aesthetics of the community?

Has there been consideration given to the visual impact of Shadowbox Studios on the scenic beauty of Placerita Canyon? What measures will be taken to minimize any adverse visual effects and ensure that the project blends seamlessly into the surrounding environment?

Will there be specific design guidelines or requirements in place to ensure that the materials, colors, and architectural styles used in the construction of the studio facilities are in harmony with the existing buildings and structures in Placerita Canyon? How will the planning commission ensure that the project maintains a cohesive and aesthetically pleasing appearance?

What provisions will be made to preserve and enhance the existing landscaping and vegetation within and around the Shadowbox Studios project site? Are there plans for native plantings, open green spaces, or other landscaping elements that contribute to the rural and natural ambiance of the area?

Has the community been involved in discussions or provided input regarding the aesthetic aspects of the Shadowbox Studios project? If so, what feedback has been received from residents and local stakeholders, and how has it influenced the planning commission's considerations and decision-making process?

Will there be any restrictions or guidelines regarding outdoor signage, lighting, or other visual elements associated with the studio facilities? How will these aspects be regulated to minimize visual clutter and maintain the character of Placerita Canyon?

Are there any plans for public art installations or other creative features within the Shadowbox Studios project that can enhance the visual appeal and contribute to the cultural vitality of the Placerita Canyon community?

I appreciate your attention to these questions and your efforts to ensure that the aesthetics of the Shadowbox Studios project align with the rural and equestrian character of Placerita Canyon. Your insights will contribute to a visually pleasing and harmonious integration of the development within our community.

Thank you for your consideration.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I have some questions regarding the potential impact of flooding in Placerita Canyon during heavy rain events. I would appreciate your insights and information on the following matters:

What measures have been taken or are planned to address the risk of flooding in Placerita Canyon during heavy rain events? Has a comprehensive flood risk assessment been conducted to evaluate the potential extent and severity of flooding in the area? Does the DEIR address this potential sufficiently?

How will the proposed Shadowbox Studios project and associated development in the vicinity of Placerita Canyon mitigate the risk of flooding? Have flood control and drainage systems been designed or implemented to prevent or minimize flooding impacts on the studio campus and surrounding areas?

Are there any specific regulations or guidelines in place to ensure that the studio project adheres to best practices for flood management? How will the project's design and construction address the potential for increased runoff and its effect on downstream areas?

Has there been consultation or coordination with relevant agencies, such as the County Department of Public Works or the Flood Control District, to assess and address the potential flooding risks in Placerita Canyon? What insights or recommendations have been provided by these agencies in relation to flood mitigation measures?

How will the proposed development impact the natural drainage patterns and existing floodplains within Placerita Canyon? Has there been an evaluation of the project's potential to alter the flow of water and exacerbate flooding risks in the area?

Will the studio project incorporate any additional measures, such as the construction of retention basins or the implementation of stormwater management practices, to help alleviate flooding concerns in Placerita Canyon? If so, what are the details of these measures and how will their effectiveness be ensured?

Are there any emergency response plans in place to address potential flooding events in Placerita Canyon, particularly in relation to the studio project? How will emergency services and evacuation procedures be coordinated to ensure the safety of residents, employees, and visitors in the area?

I appreciate your attention to these questions and the opportunity to gain a better understanding of the planning and mitigation efforts related to flooding in Placerita Canyon. Thank you for your commitment to ensuring the safety and well-being of our community.

Sincerely,

Address: 23030 Parkwood Dr Newhall CA 91321

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I would like to inquire about the potential impact of heavy rain events on flooding in Placerita Canyon. Given the significance of this concern, I kindly request your insights and responses to the following questions:

How has the proposed Shadowbox Studios project accounted for the risk of flooding in Placerita Canyon during heavy rain events? Has a thorough analysis of the area's drainage system and flood patterns been conducted to assess the project's potential impact on flooding?

What measures will be implemented to mitigate the risk of flooding associated with the studio project? Are there plans for adequate stormwater management infrastructure, such as retention basins or drainage channels, to handle the increased runoff during heavy rain events?

Has a hydrological study been performed to determine the project's potential effects on the capacity of existing waterways and drainage systems in Placerita Canyon? How will the project ensure that the additional runoff from the development does not exacerbate flooding conditions in the area?

Will there be provisions to maintain and monitor the stormwater management systems on an ongoing basis to ensure their effectiveness and prevent potential flooding incidents? How will the responsible party be held accountable for regular maintenance and addressing any necessary repairs or modifications?

Has the community's input been sought regarding the potential flood risks associated with the studio project? What concerns or suggestions have been raised by local residents, businesses, and relevant stakeholders, and how have these considerations influenced the planning commission's approach to flood mitigation?

Will the project adhere to established best practices and regulations concerning stormwater management and flood prevention, such as the requirements set forth by local, state, and federal agencies? How will compliance with these regulations be ensured throughout the construction and operation phases of the project?

What plans are in place to communicate and educate the public about the flood risks in Placerita Canyon, particularly in relation to the studio project? How will the community be informed of the measures taken to mitigate flooding and the steps they can take to stay safe during heavy rain events?

In the event of a significant flood event, what emergency response protocols are in place to protect the safety and well-being of residents, studio personnel, and other individuals in the area? How will communication and coordination among relevant agencies be facilitated during such events?

I appreciate your attention to these important questions and the opportunity to gain further insights into the flood risk considerations for the proposed Shadowbox Studios project. Thank you for your commitment to addressing community concerns and ensuring the safety and sustainability of our region.

Sincerely,

Name: DAVID SALAZAR

Address: 24505 TOWN CENTER DR. VALENCIA

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my strong support for the adoption of Alternative #3 for the Shadowbox Studios project. I believe that Alternative #3 offers numerous benefits and represents the most environmentally responsible choice for the development.

Alternative #3, with its 24% reduction in size compared to other alternatives, is the environmentally superior option that aligns with the goals of sustainability and responsible land use. By minimizing the footprint of the studio project, Alternative #3 helps preserve the natural beauty of the surrounding area, protects sensitive ecosystems, and minimizes habitat disruption. This reduction in size demonstrates a commitment to environmental stewardship and a consideration for the long-term sustainability of our community.

Furthermore, Alternative #3 promotes efficient land use and respects the unique character of Placerita Canyon. It preserves the visual aesthetics of the area by minimizing the visual impact of the studio project. This approach not only maintains the scenic beauty that attracts residents and visitors to the region but also ensures compatibility with the existing natural and cultural features of Placerita Canyon.

Additionally, Alternative #3 emphasizes the need for responsible traffic management. With its consideration for at least one additional ingress/egress gate that does not feed into Placerita Canyon, this alternative addresses concerns regarding traffic congestion, emergency response access, and the overall transportation infrastructure plan for the Santa Clarita area. By distributing traffic flow and providing alternative routes, it helps alleviate potential burdens on local roadways and ensures a more efficient and safer transportation network for both the studio project and the surrounding community.

I appreciate the efforts and considerations of the Santa Clarita Planning Commission in evaluating the various alternatives for the Shadowbox Studios project. Alternative #3, with its reduced size, environmental benefits, and emphasis on responsible traffic management, represents a balanced approach that upholds both the needs of development and the preservation of our natural resources.

In conclusion, I strongly urge the planning commission to adopt Alternative #3 for the Shadowbox Studios project. This alternative reflects a commitment to environmental sustainability, responsible land use, and the long-term well-being of our community. By supporting Alternative #3, we can ensure a harmonious balance between economic growth and environmental conservation.

Thank you for your attention to this matter. I trust that you will give careful consideration to the significant environmental advantages of Alternative #3 in your decision-making process.

Sincerely,

Name: Jelsi Chinchilla

Address: 20059 Avenue of the Oaks, Newhall

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the potential risks of flooding in Placerita Canyon during heavy rain events and to seek clarification on the measures being taken to address this concern. I have several questions regarding this matter and would appreciate your insights and response:

What are the historical flood patterns in Placerita Canyon during heavy rain events? Has there been any assessment of the flood risk in the area, particularly in relation to the proposed Shadowbox Studios project? If so, what were the findings of these assessments, and how have they influenced the planning process?

What measures will be implemented to mitigate the risk of flooding in Placerita Canyon, both during the construction phase and once the studio project is operational? Are there any specific design elements or infrastructure improvements planned to address potential flood hazards in the area?

Has the proposed project undergone a comprehensive hydrological analysis to evaluate its impact on local water flow patterns and the potential for increased flooding in Placerita Canyon? If so, what were the findings of this analysis, and how have they been incorporated into the project's design and mitigation plans?

Will there be any requirements or conditions of approval related to stormwater management and drainage systems to ensure that the project does not exacerbate existing flooding issues in Placerita Canyon? How will the effectiveness of these systems be monitored and evaluated over time?

Has the community been consulted or involved in the assessment of flood risks and the development of flood mitigation strategies for Placerita Canyon? What feedback has been received from residents, local businesses, and other stakeholders regarding this issue, and how has it been taken into account during the planning process?

Are there any provisions in place to ensure that the project's construction activities do not contribute to soil erosion or other factors that could increase the likelihood of flooding in Placerita Canyon? How will compliance with these provisions be monitored and enforced?

Has there been coordination with relevant local agencies, such as flood control districts or water resource management authorities, to address potential flooding concerns in Placerita Canyon? Are there any joint efforts or partnerships in place to manage flood risks and ensure the safety of residents and the proposed studio project?

What emergency response plans are being developed to address potential flooding events in Placerita Canyon? How will the safety of residents, studio personnel, and surrounding areas be ensured during such incidents? Are there any evacuation protocols or procedures in place to mitigate risks and protect lives and property?

I appreciate your attention to these questions and your commitment to addressing the potential flooding concerns in Placerita Canyon. It is important to prioritize the safety and well-being of our community and to ensure that appropriate measures are in place to mitigate the risks associated with heavy rain events.

Thank you for your time and consideration. I look forward to your insights and clarification on this matter.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I have several questions regarding the removal and relocation of oak trees from the proposed Shadowbox Studios project site. I would greatly appreciate your insights and responses to the following:

How many oak trees are currently present on the project site, and what is the proposed plan for their removal or relocation? Will any efforts be made to minimize the impact on these trees, considering their ecological significance and the visual appeal they add to the landscape?

What criteria have been established to determine which oak trees will be relocated and which ones will be removed? Will the relocation process be conducted by professionals with expertise in tree transplantation to ensure the highest chances of survival and successful establishment in their new locations?

Has an arborist or a tree specialist been consulted to assess the health and viability of the oak trees on the project site? Will their recommendations be taken into consideration when determining the fate of these trees?

Are there any specific plans to replace or mitigate the loss of oak trees on the project site? Will new oak trees be planted elsewhere on the property or in the vicinity to compensate for the removal of existing trees?

Will there be measures in place to protect any remaining oak trees on the project site during the construction phase? How will the construction activities be managed to prevent damage or stress to these trees, including their root systems?

Has public input been sought to gather opinions and concerns regarding the removal or relocation of oak trees? How have these perspectives influenced the planning commission's considerations and decision-making process in relation to the project's impact on the local tree canopy?

What monitoring and follow-up measures will be implemented to ensure the success and survival of relocated oak trees? Will there be a timeframe for evaluating their health and establishment in their new locations?

I appreciate your attention to these questions and your commitment to preserving and mitigating the impact on oak trees during the development of the Shadowbox Studios project. Your insights will contribute to an environmentally responsible and sensitive approach to tree management on the site.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to further inquire about the considerations that planning commissioners would take into account when determining a condition of approval regarding the design of Dockweiler Drive, specifically focusing on the safety factors associated with roundabouts as opposed to the signalized light sequence proposed by Shadowbox Studios. I would appreciate your response to the following questions:

In considering the safety factors, what specific aspects of roundabouts will be taken into account when determining the condition of approval for the design of Dockweiler Drive? How would factors such as reduced speeds, improved traffic flow, and potential reductions in severe accidents and collisions be considered?

Has there been any analysis or comparison conducted between roundabouts and signalized intersections in terms of safety performance? Are there any studies or data available that demonstrate the potential safety benefits of roundabouts, such as lower crash rates, reduced severity of accidents, and improved pedestrian and cyclist safety?

Has there been any engagement or consultation with traffic engineering experts, transportation authorities, or other professionals experienced in roundabout design and implementation to gather insights and expertise on the safety considerations associated with roundabouts? Will their recommendations or findings taken into account during the decision-making process?

How would the specific characteristics of the Dockweiler Drive area, such as anticipated traffic volumes, road geometry/incline/descent, existing infrastructure, and pedestrian and cyclist usage, influence the safety considerations when comparing a roundabout to a signalized light sequence? Would there be any modifications or enhancements required to ensure optimal safety performance of the chosen design?

What opportunities would be available to educate the public and road users about the safe usage and proper navigation of roundabouts if Placerita Canyon's preferred roundabout were to be included in the condition of approval for the Dockweiler Drive design? How would awareness and understanding of roundabout rules and best practices be promoted to ensure a smooth transition and safe operation for all users?

Are there any specific safety guidelines or standards that would need to be met in the design and implementation of a roundabout at Dockweiler Drive? What measures would be taken to address potential concerns or conflicts, such as pedestrian and cyclist access, horse crossings, signage and markings, and visibility for drivers approaching the roundabout?

Thank you for your attention to these additional questions. I greatly appreciate your insights and clarification regarding the safety considerations associated with roundabouts and the potential impact on the condition of approval for the design of Dockweiler Drive.

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the considerations that planning commissioners would take into account when determining a condition of approval regarding the design of Dockweiler Drive in relation to Placerita Canyon's preferred roundabout versus the signalized light sequence proposed by Shadowbox Studios. I would appreciate your response to the following question:

What specific considerations would planning commissioners take into account when determining a condition of approval that requires the City's design of Dockweiler Drive that incorporates Placerita Canyon's preferred roundabout instead of the signalized light sequence proposed by Shadowbox Studios? How will the factors of safety and community preferences be weighed in the decision-making process?

Thank you for your attention to this question. I look forward to your insights and clarification regarding the considerations for a condition of approval that would require the incorporation of Placerita Canyon's preferred roundabout in the design of Dockweiler Drive.

Sincerely,

Name: Alondra Aguilar

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to further inquire about the considerations that planning commissioners would take into account when determining a condition of approval regarding the design of Dockweiler Drive in relation to Placerita Canyon's preferred roundabout versus the signalized light sequence proposed by Shadowbox Studios. In particular, I am interested in understanding the safety factors associated with roundabouts and how they would be weighed in the decision-making process. I kindly request your insights and response to the following questions:

How would safety considerations be evaluated when determining a condition of approval that requires the City's design of Dockweiler Drive to incorporate Placerita Canyon's preferred roundabout? What specific safety factors associated with roundabouts would be taken into account, such as reduced speeds, improved visibility, and decreased conflict points?

Has there been any analysis or comparison conducted between roundabouts and signalized light sequences in terms of safety performance? Are there any studies or data available that demonstrate the potential safety benefits of roundabouts over traditional signalized intersections?

What is the historical safety record of roundabouts within the Santa Clarita area or other similar locations versus collision frequency at signalized intersections? Have there been any reported incidents or accidents at existing roundabouts that could inform the decision-making process regarding the design of Dockweiler Drive?

Will there be a comprehensive safety assessment conducted specifically for the proposed signalized lights at Dockweiler Drive to ensure that it meets the required standards and guidelines? How will the safety of various road users, including vehicles, pedestrians, horses, and cyclists, be taken into consideration during the design and implementation if the roundabout is taken away?

Has there been any consultation or engagement with local transportation authorities, law enforcement agencies, and other safety experts to gather input and feedback on the safety considerations associated with roundabouts? How have their perspectives been incorporated into the decision-making process?

How will the potential safety benefits of roundabouts be communicated to the public, particularly to address any concerns or misconceptions that may exist? Will there be efforts to provide education and awareness about roundabout usage and safe practices for all road users?

Will there be ongoing monitoring and evaluation of the safety performance of the roundabout or signalized lights at Dockweiler Drive once it is operational? How will any identified safety issues or concerns be addressed, and will there be mechanisms in place for making adjustments or improvements as necessary?

Thank you for your attention to these additional questions. I greatly appreciate your insights and clarification regarding the considerations for a condition of approval that would require the incorporation of Placerita Canyon's preferred roundabout in the design of Dockweiler Drive, particularly in relation to the safety factors associated with roundabouts. Understanding the thoroughness of the safety evaluation process will help ensure a well-informed decision that prioritizes the well-being and safety of all road users.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I would like to inquire about the potential impact of heavy rain events on flooding in Placerita Canyon. I have several questions regarding this matter and would appreciate your insights:

1. What measures have been taken to assess the risk of flooding in Placerita Canyon during heavy rain events? Has a comprehensive flood risk analysis been conducted to evaluate the vulnerability of the area?
2. Are there any existing flood control infrastructure or systems in place to mitigate the risk of flooding in Placerita Canyon? If so, how effective are these measures in handling heavy rain events? Are there any plans to enhance or upgrade the flood control infrastructure in the area?
3. How will the proposed Shadowbox Studios project take into account the potential risk of flooding in Placerita Canyon? Have flood mitigation strategies been incorporated into the project's design and planning process to ensure the safety and protection of the studio facilities, surrounding properties, and residents?
4. In the event of heavy rain and subsequent flooding in Placerita Canyon, what emergency response plans are in place to ensure the safety and well-being of residents, including those in the vicinity of the Shadowbox Studios project? How will evacuation procedures be coordinated, and what communication channels will be utilized to alert and inform residents in a timely manner?
5. Has the potential for increased stormwater runoff from the studio project itself been evaluated? What measures will be implemented to manage and control stormwater runoff, particularly during heavy rain events, to prevent additional strain on the existing drainage systems and mitigate the risk of flooding downstream?
6. How will the impact of climate change, including potential increases in the frequency and intensity of heavy rain events, be considered in the assessment of flood risk and mitigation strategies for Placerita Canyon? Are there any plans to incorporate climate resilience measures into the planning and design of the Shadowbox Studios project?
7. Will there be ongoing monitoring and evaluation of flood risks and the effectiveness of flood control measures in Placerita Canyon? How will any necessary adjustments or improvements be identified and implemented to ensure the continued safety and resilience of the area?

I appreciate your attention to these questions and your commitment to addressing the potential impact of flooding in Placerita Canyon during heavy rain events. Understanding the measures in place to mitigate flood risks and protect the well-being of the community is essential for responsible planning and decision-making.

Thank you for your time and consideration. I look forward to your insights and updates regarding the management of flooding in Placerita Canyon.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my support for the adoption of Alternative #3 for the Shadowbox Studios project. I believe that this alternative offers significant benefits for our community and the environment, and I would like to outline my reasons for endorsing it.

First and foremost, Alternative #3 demonstrates a commitment to environmental conservation. With its 24% reduction in size, this alternative helps minimize the project's impact on sensitive habitats, natural resources, and the overall ecological integrity of our region. By choosing Alternative #3, we can ensure that the development is conducted in a responsible and sustainable manner, preserving the natural beauty of our surroundings for future generations.

Furthermore, Alternative #3 addresses concerns regarding traffic management. Its smaller size allows for better traffic flow and congestion mitigation, minimizing the potential disruptions to local roadways and neighboring residential areas. By prioritizing efficient transportation planning, this alternative takes into account the needs of both the studio project and the surrounding community, ensuring a harmonious coexistence.

I also appreciate how Alternative #3 aligns with the existing character of our community. By reducing the scale of the development, this alternative preserves the unique charm and quality of life enjoyed by Santa Clarita residents. It demonstrates a thoughtful approach to growth that respects the values and interests of our community, fostering a positive and sustainable future for all.

Lastly, I want to emphasize the public support for Alternative #3. Through conversations with fellow residents, community organizations, and environmental advocates, it is clear that this alternative resonates strongly with our shared values. Its adoption would not only reflect the desires of the community but also set a positive example for future development projects in Santa Clarita.

In conclusion, I urge the Santa Clarita Planning Commission to carefully consider and ultimately select Alternative #3 for the Shadowbox Studios project. This alternative offers a balanced and environmentally superior approach that prioritizes conservation, traffic management, community compatibility, and public support. By choosing Alternative #3, we can ensure a sustainable and prosperous future for our community.

Thank you for your time and attention to this matter. I trust that you will give due consideration to the voices of concerned residents and the long-term benefits that Alternative #3 brings to Santa Clarita. Should you require any further information or have any questions, please do not hesitate to reach out.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the feasibility and potential compromise of implementing a double lane roundabout at the intersection of Dockweiler Drive, Arch Street, and 12th Street as an alternative to address the concerns of both residents and the studio. Given there has never been an adoption of a standard for roundabouts in the city of Santa Clarita, I would appreciate your insights and response to the following question:

Considering the absence of a standard for roundabouts in Santa Clarita, could a double lane roundabout be considered as a potential compromise between the preferences of residents and the needs of the studio at the intersection of Dockweiler Drive, Arch Street, and 12th Street? What factors would be taken into account when evaluating the feasibility and appropriateness of such a design?

Thank you for your attention to this question. I look forward to your insights and clarification regarding the potential consideration of a double lane roundabout as a compromise solution at the mentioned intersection.

Sincerely,

Name: Bertrand Sheffer

Address: 38425 5th St. W Apt F111 Palmdale, CA 93551

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I would like to inquire about the aesthetics of the proposed Shadowbox Studios project and its compatibility with the rural and equestrian character of the Placerita Canyon community.

What efforts have been made to ensure that the design and aesthetics of the Shadowbox Studios project are in harmony with the surrounding rural and equestrian environment of Placerita Canyon? Have there been considerations given to architectural styles, materials, and landscaping that will complement the existing character of the community?

Will the proposed development incorporate design elements that preserve the scenic beauty and natural landscape of Placerita Canyon? Are there plans to protect and enhance views, vistas, and open spaces that are cherished by the community and contribute to its unique identity?

Has there been any collaboration with local community organizations, such as the Placerita Canyon Property Owners Association or equestrian groups, to gather input and ensure that the project's aesthetics align with their expectations? How has this feedback influenced the planning commission's considerations and decision-making process?

Will there be guidelines or restrictions in place to control the visual impact of the studio facilities, such as building heights, signage, lighting, or other visual elements? How will the planning commission ensure that the project's visual components are respectful of the rural and equestrian character of Placerita Canyon?

Are there plans for integrating sustainable and environmentally friendly design practices into the project's aesthetics? Will features such as green spaces, native plantings, or renewable energy systems be incorporated to enhance the overall visual appeal and environmental compatibility of the development?

How will the visual impact of the Shadowbox Studios project be evaluated and monitored once it is operational? Are there mechanisms in place to address any unforeseen issues related to aesthetics and ensure ongoing compliance with the approved design guidelines and aesthetic considerations?

Will there be opportunities for public input and review of the project's aesthetics during the construction phase? How will community members and stakeholders be engaged to provide feedback and suggestions regarding the visual aspects of the development?

I appreciate your attention to these questions and your commitment to maintaining the aesthetic integrity of Placerita Canyon while considering the Shadowbox Studios project. Your insights and efforts to ensure a visually compatible and respectful development will contribute to the overall well-being and satisfaction of the community.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to further inquire about the possibility of considering a double lane roundabout as a potential compromise between residents and the studio at the intersection of Dockweiler Drive, Arch Street, and 12th Street, particularly in light of the city of Santa Clarita not having adopted a standard for roundabouts at this time. I would appreciate your response to the following questions:

In the absence of a roundabout standard in Santa Clarita, what specific considerations would need to be taken into account when evaluating the feasibility and potential benefits of a double lane roundabout at the intersection of Dockweiler Drive, Arch Street, and 12th Street? How would factors such as traffic volume, road geometry, pedestrian and cyclist usage, and future growth and development be considered in the decision-making process?

Has there been any analysis or comparison conducted between single lane and double lane roundabouts in terms of their suitability and effectiveness at similar intersections? Are there any studies or data available that demonstrate the potential benefits and challenges associated with double lane roundabouts, particularly in relation to traffic flow, safety, and capacity?

Considering the unique characteristics and needs of the intersection at Dockweiler Drive, Arch Street, and 12th Street, what advantages might a double lane roundabout offer over alternative solutions, such as signalized intersections or other intersection designs? How would the inclusion of an additional lane address concerns related to traffic congestion, efficient movement of vehicles, and potential future growth in the area?

What potential challenges or limitations might arise in implementing a double lane roundabout at the specific location? Are there any constraints, such as land availability, right-of-way considerations, or existing infrastructure, that would need to be carefully evaluated and addressed?

Given that a double lane roundabout may be a novel concept for the city of Santa Clarita, what opportunities would exist to educate the public and road users about the safe usage and proper navigation of a double lane roundabout at this intersection? How would awareness and understanding of double lane roundabout rules and best practices be promoted to ensure a smooth transition and safe operation for all users?

What additional studies, evaluations, or expert consultations might be necessary to assess the suitability and potential impacts of a double lane roundabout at the intersection of Dockweiler Drive, Arch Street, and 12th Street? How would community input and stakeholder feedback be incorporated into the decision-making process regarding the choice of intersection design?

Thank you for your attention to these additional questions. I greatly appreciate your insights and clarification regarding the feasibility and potential considerations of a double lane roundabout as a compromise solution for the intersection of Dockweiler Drive, Arch Street, and 12th Street, given the absence of a roundabout standard in the city of Santa Clarita.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the potential requirement for an additional ingress and egress to the studio campus. In light of this, I have some questions regarding the consideration for the residents of Placerita Canyon, as well as the safety and well-being of horses, livestock, and pets during evacuation emergencies. I would appreciate your response:

Has there been any assessment or planning regarding the evacuation procedures and protocols for the residents of Placerita Canyon in the event of an emergency, considering the potential increase in traffic due to the proposed lack of additional ingress and egress points?

Will there be clear and well-communicated evacuation routes and instructions for the residents of Placerita Canyon, particularly those with horses, livestock, and pets? How will these instructions be disseminated to ensure that everyone can evacuate safely and efficiently?

Has the impact of increased traffic during evacuation emergencies been considered in relation to the safety and welfare of horses, livestock, and pets in the Placerita Canyon area? Will there be specific measures or accommodations in place to address the needs of these animals during evacuations? Were they taken into the calculations presented by Pat Gibson? If so, how many horses and livestock trailers were calculated in the evacuation time?

Are there designated areas or facilities on the studio campus that can provide temporary shelter for horses, livestock, and pets in the event of an evacuation? If so, how will these facilities be communicated to the residents, and what capacity will they have to accommodate the animals? How large is the phantom dog park?

Will there be provisions or protocols for assisting residents in evacuating their horses, livestock, and pets, such as providing trailers or transportation support during emergencies?

How will emergency response personnel be trained and equipped to handle situations involving the evacuation of animals, including horses, livestock, and pets? Will there be coordination with animal control agencies and animal welfare organizations to ensure their involvement in emergency planning and response?

Will there be public education and awareness campaigns to inform residents of Placerita Canyon about the importance of emergency preparedness for their animals and the steps they can take to ensure their safety during evacuations?

How will the effectiveness of the evacuation procedures and the safety of animals during emergencies be monitored and evaluated? Will there be mechanisms in place to gather feedback from residents and address any concerns or areas for improvement?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the considerations for the residents of Placerita Canyon, horses, livestock, and pets during evacuation emergencies.

Sincerely,

Name: Linda Bradley

Address: 22432 13th St. Newhall 91321

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I have several questions regarding the potential for flooding in Placerita Canyon during heavy rain events. I would greatly appreciate your insights and responses to the following:

What measures have been taken to assess the risk of flooding in Placerita Canyon during heavy rain events? Has a comprehensive flood risk analysis been conducted to understand the potential impact on both the proposed Shadowbox Studios project and the surrounding areas?

What strategies and design considerations are being implemented to mitigate the risk of flooding in Placerita Canyon? Are there plans for proper drainage systems, retention basins, or other flood control measures to ensure the safety of residents, properties, and infrastructure during heavy rain events?

Has there been collaboration with relevant agencies, such as the Santa Clarita Valley Watershed Advisory Committee or the County Department of Public Works, to ensure that the flood risk in Placerita Canyon is adequately addressed? How will coordination and communication be maintained to address any potential flood-related issues that may arise?

Will the proposed development of Shadowbox Studios incorporate flood-resilient design features to minimize the impact of flooding? If so, what specific measures or design considerations will be implemented to protect the studio facilities, surrounding properties, and infrastructure from potential flood damage?

How will emergency response and evacuation plans be developed and implemented in the event of a flooding incident in Placerita Canyon? Are there established protocols in place to ensure the safety and well-being of residents, studio personnel, and the general public during such emergencies?

Has public input been sought to gather information about previous flooding incidents, concerns, and suggestions from residents of Placerita Canyon? How has this input influenced the planning commission's considerations and decision-making process regarding flood mitigation measures?

Are there any ongoing studies or future plans to address the long-term flood risk in Placerita Canyon, considering potential changes in weather patterns or climate conditions? How will the planning commission adapt and respond to evolving flood risk factors in the area?

I appreciate your attention to these questions and your efforts to address the potential flooding concerns in Placerita Canyon exasperated by Shadowbox. Your insights will help ensure the safety, well-being, and resilience of our community during heavy rain events.

Thank you for your time and consideration.

Sincerely,

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I have some questions regarding the aesthetics of the proposed Shadowbox Studios project and its compatibility with the rural and equestrian character of the Placerita Canyon community. I kindly request your insights and responses to the following:

What efforts have been made to ensure that the design and architectural elements of Shadowbox Studios align with the rural and equestrian aesthetics of Placerita Canyon? Has the project undergone a design review process to evaluate its visual impact and compatibility with the surrounding environment?

Are there specific design guidelines or requirements in place to ensure that the project's buildings, structures, and landscaping elements harmonize with the natural beauty of Placerita Canyon? How will the project's aesthetics enhance and complement the existing rural and equestrian character of the area?

Will there be any restrictions or regulations on the types of materials, colors, or architectural styles that can be used for the buildings within the Shadowbox Studios project? How will these guidelines contribute to creating a visually cohesive and appealing environment that blends with the surrounding community?

Has there been any consideration given to the visual impact of the project on the scenic vistas and viewpoints in Placerita Canyon and Circle J? Will there be efforts to preserve and enhance the existing views and natural landscapes during the construction and operation of the studio facilities?

How will the landscaping and open space design within the Shadowbox Studios project be implemented to ensure it complements the rural and equestrian character of Placerita Canyon? Are there plans for incorporating native vegetation, maintaining wildlife corridors, or preserving the existing vegetation to promote a visually pleasing and ecologically sustainable environment?

Has the community been involved in the discussion and decision-making process regarding the aesthetics of the project? How has their feedback and input influenced the planning commission's considerations and any design modifications made to ensure compatibility with the Placerita Canyon community?

Will there be ongoing monitoring and compliance measures in place to ensure that the aesthetics of Shadowbox Studios are maintained over time? How will any deviations or non-compliance with the approved design guidelines be addressed and rectified?

I appreciate your attention to these questions and your efforts to ensure that the aesthetics of the Shadowbox Studios project align with and enhance the rural and equestrian character of Placerita Canyon. Your insights will help maintain the visual appeal and integrity of our community.

Thank you for your time and consideration.

Sincerely,

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to further inquire about if consideration was given to donating a portion of the Shadowbox Studios property to the City of Santa Clarita for the purpose of building a cultural center. The establishment of a cultural center can bring numerous benefits to the community, such as fostering arts and cultural activities, providing educational opportunities, and serving as a hub for community engagement.

Has there been any formal proposal or discussion regarding the allocation of a portion of the Shadowbox Studios property for the development of a cultural center? If so, what were the main considerations and motivations behind this proposal, and what progress has been made in the discussions with the studio project stakeholders? If not, would you consider as a condition of approval?

What potential benefits do you envision a cultural center would bring to the community and the city as a whole? Are there specific goals or objectives that the City of Santa Clarita aims to achieve through the establishment of a cultural center if Shadowbox Studios were to donate a portion of its property?

Have there been any assessments or studies conducted to evaluate the feasibility and suitability of incorporating a cultural center with the construction of the studio campus? Could factors such as land availability, infrastructure requirements, zoning considerations, and compatibility with the overall vision of the Shadowbox Studios project be taken into account?

If the allocation of a portion of the Shadowbox Studios property for a cultural center is being considered, how would the ownership, management, and funding of the cultural center be addressed? Are there any potential partnerships or collaborations with community organizations, non-profit entities, or private investors that have been explored?

Has there been any community input or engagement regarding the idea of a cultural center as a condition of approval for the Shadowbox Studios property? Were there any public forums, surveys, or consultations conducted to gather feedback and gauge the level of support from residents and stakeholders?

Are there any alternative proposals or potential locations within the city that have been evaluated for the establishment of a cultural center, apart from the Shadowbox Studios property? What were the main considerations and reasons for either pursuing or not pursuing those alternative options?

What steps, if any, are being taken to ensure that the cultural center, if established as a condition of approval, aligns with the broader cultural and artistic vision of the City of Santa Clarita? Could there be plans to incorporate various arts disciplines, community programs, and cultural initiatives within the proposed cultural center?

Thank you for your attention to these additional questions. I greatly appreciate your insights and clarification regarding the consideration for a cultural center within the Shadowbox Studios property. Understanding the progress, motivations, and potential benefits associated with this proposal will provide valuable information regarding the future development plans for the studio project and the cultural landscape of Santa Clarita.

Sincerely,

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I have several questions regarding wildfire safety in relation to the proposed Shadowbox Studios project, considering the historical wildfire incident in 1962 that destroyed Melody Ranch Studios in Placerita Canyon, the devastating Sand Fire in Sand Canyon, the horrific fire that destroyed Paradise, California in recent years, and so many more.

Has a comprehensive wildfire risk assessment been conducted for the proposed Shadowbox Studios project site? What are the specific findings and recommendations from this assessment in terms of mitigating the risk of wildfire in the area?

What measures will be implemented to ensure that the studios and surrounding facilities are designed and constructed with wildfire safety in mind? Will fire-resistant materials, landscaping practices, and building design guidelines be adopted to minimize the vulnerability of the structures to wildfire?

Are there plans for creating defensible space around the studios and other buildings on the site? How will vegetation management and fuel modification practices be implemented to reduce the risk of fire spread and improve the overall safety of the area?

Has there been collaboration and coordination with local fire departments and emergency response agencies to establish protocols for wildfire prevention, preparedness, and response in the vicinity of the Shadowbox Studios project? How will communication and coordination be maintained during wildfire events?

Will the project incorporate appropriate fire access roads and fire hydrants to ensure efficient emergency response in the event of a wildfire? What provisions are being made to facilitate safe evacuation for studio personnel, residents, and visitors during wildfire incidents?

Has the historical wildfire incident in 1962 that destroyed Melody Ranch Studios influenced the planning commission's considerations and decision-making process regarding wildfire safety for the Shadowbox Studios project? How will the lessons learned from that incident be applied to prevent a similar occurrence?

Will there be provisions for ongoing monitoring, maintenance, and updates of the wildfire safety measures implemented for the studios and the surrounding area? How will these measures be evaluated and adjusted over time to ensure continued effectiveness and adaptability to changing wildfire risk factors?

I appreciate your attention to these questions and your commitment to ensuring wildfire safety in the development of the Shadowbox Studios project. Your insights and efforts will contribute to the protection of life, property, and the natural environment in Placerita Canyon.

Thank you for your time and consideration.

Sincerely,

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I have several questions regarding wildfire safety considerations in light of the presence of the proposed Shadowbox Studios in Placerita Canyon, particularly in reference to the 1962 firestorm that destroyed Melody Ranch Studios.

- Has a comprehensive wildfire risk assessment been conducted for the proposed Shadowbox Studios project and its surrounding area? What measures have been taken to evaluate the vulnerability of the site to wildfire incidents, considering the historical context of the 1962 firestorm?
- What specific fire prevention and mitigation strategies will be implemented to ensure the safety of the Shadowbox Studios facilities, neighboring properties, and the surrounding community? Will there be dedicated firebreaks, fuel management practices, or other measures to minimize the risk of fire spreading?
- Has there been coordination with local fire departments, such as the Los Angeles County Fire Department, to incorporate their recommendations and guidelines into the design and construction of the studios? How will emergency response and firefighting efforts be facilitated in the event of a wildfire incident in the area?
- Are there plans for the installation of fire detection and monitoring systems within the studios and the surrounding vicinity? How will early warning systems be implemented to ensure timely evacuation and response in the event of a wildfire threat?
- Will there be designated evacuation routes and plans in place to ensure the safe evacuation of studio personnel, residents, and visitors in the event of a wildfire emergency? How will these plans be communicated and practiced to ensure a swift and organized response?
- Are there any specific requirements or guidelines in place for landscaping and vegetation management on the Shadowbox Studios property to reduce fire risks? Will fire-resistant plant species and appropriate spacing be considered to minimize the potential fuel load?
- Has public input been sought to gather concerns and suggestions from residents and community members regarding wildfire safety measures associated with the proposed studio project? How have these perspectives influenced the planning commission's considerations and decision-making process in relation to fire prevention and response?

I appreciate your attention to these questions and your commitment to ensuring the safety and resilience of the Placerita Canyon community in the face of potential wildfire threats. Your insights will contribute to a well-prepared and fire-safe environment for the proposed Shadowbox Studios.

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to seek clarification regarding the potential consequences if the proposed Shadowbox Studios project does not receive approval from the Metropolitan Water District (MWD) for various aspects, including the use of their land for the north parking, emergency access route, secondary access to the north parking lot, and the use of their property for a greens nursery. I kindly request your insights on the following matters:

What specific roles or approvals are required from the Metropolitan Water District for the aforementioned aspects of the Shadowbox Studios project? Are these approvals critical for the project's overall feasibility and successful implementation?

Has the planning commission already engaged in discussions or negotiations with the Metropolitan Water District regarding the proposed land uses and access routes associated with the project? If so, what progress has been made in these discussions, and what are the main considerations and concerns raised by the Metropolitan Water District?

If the project fails to secure approval from the Metropolitan Water District for any of the mentioned aspects, how will this impact the overall feasibility and functionality of the Shadowbox Studios project? Are there alternative solutions or workarounds being explored to address the potential absence of these approvals?

Will the planning commission consider the approval of the Metropolitan Water District as a condition for granting approval to the Shadowbox Studios project? Are there any mechanisms in place to ensure that the necessary approvals are obtained before proceeding with the project to avoid any legal or logistical challenges?

If the approvals from the Metropolitan Water District are not obtained, what implications does this have for the project's compliance with relevant regulations and requirements? How will the project address any non-compliance issues or potential conflicts with local regulations?

Has the community and relevant stakeholders been informed about the potential impact of the Metropolitan Water District's approvals on the Shadowbox Studios project? Have there been any opportunities for public input or feedback regarding this matter?

Are there any alternative options or contingency plans being considered in case the approvals from the Metropolitan Water District cannot be obtained? How will these options be evaluated, and what criteria will be used to determine their feasibility and suitability for the project?

Thank you for your attention to these questions. I greatly appreciate your insights and clarification regarding the potential consequences if the Shadowbox Studios project does not receive approval from the Metropolitan Water District for various aspects. Understanding the implications and any alternative plans will provide valuable information for assessing the project's viability and its adherence to regulatory requirements.

Sincerely,

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to seek clarification regarding the potential impact of a zone change requirement for the proposed Shadowbox Studios project on the approved Dockweiler Drive Extension in the North Newhall Area. Considering that the current zoning allows for the extension, but the studio project requires a change due to differing land usage from the General Plan, I kindly request your response to the following questions:

If the Shadowbox Studios project necessitates a zone change due to its significant variance from the current General Plan, will this requirement have any implications for the approved Dockweiler Drive Extension? Will the extension need to be revisited or modified as a result of the zone change?

What other considerations or factors come into play when evaluating the relationship between the zone change requirement for the Shadowbox Studios project and the approved Dockweiler Drive Extension? How will the planning commission ensure that both developments can coexist harmoniously and fulfill their respective objectives?

Has the potential impact of the zone change requirement on the approved Dockweiler Drive Extension been thoroughly assessed and evaluated? Are there any specific studies, analyses, or consultations conducted to determine the viability and compatibility of the two projects?

If modifications or adjustments to the Dockweiler Drive Extension are necessary due to the zone change requirement, what would be the process for addressing these changes? Will there be opportunities for public input and consultation to ensure that the community's perspectives and concerns are taken into account?

Are there any alternative solutions or approaches that have been explored to address the zone change requirement while minimizing any potential impact on the approved Dockweiler Drive Extension? If so, what were these alternatives, and why were they not deemed suitable for the project?

What measures will be taken to ensure that any modifications or adjustments to the Dockweiler Drive Extension, if required, are carried out in a manner that considers the safety, efficiency, and functionality of the roadway for both the studio project and the surrounding community of Placerita Canyon?

Thank you for your attention to these questions. I greatly appreciate your insights and clarification regarding the potential implications of a zone change requirement for the Shadowbox Studios project on the approved Dockweiler Drive Extension. Understanding the considerations and steps taken to address this relationship will provide valuable information regarding the future development plans and the overall planning process.

Sincerely,

Name: M J Crum

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to seek clarification on the potential implications and considerations regarding I am writing to seek clarification regarding the potential interplay between the approved Dockweiler Drive Extension and the proposed Shadowbox Studios project. Specifically, I am interested in understanding the implications of the required zone change for the studio project and its potential impact on the Dockweiler Extension. I kindly request your response to the following questions:

Considering that the Dockweiler Drive Extension was approved based on the current zoning in the North Newhall Area, will the proposed zone change for the Shadowbox Studios project necessitate the reopening of discussions regarding the Dockweiler Extension? How will the zone change affect the implementation and functionality of the extension? How will residents of Placerita Canyon be affected?

What other considerations come into play when a zone change is required for the proposed Shadowbox Studios project? Are there specific criteria or conditions that need to be met before the zone change can be granted, and how does this impact the overall planning process?

Will the zone change and its potential impact on the Dockweiler Extension be evaluated as part of the environmental review process for the Shadowbox Studios project? If not, can they be as a condition of approval? Are there any studies or assessments planned to assess the compatibility and feasibility of the proposed zone change and its relation to the approved extension along with impacts to the surrounding community?

Are there any alternative solutions or approaches being considered to ensure the compatibility and functionality of both the proposed Shadowbox Studios project and the Dockweiler Extension, considering the required zone change? How will any potential conflicts or challenges be addressed during the planning and implementation stages?

What level of coordination and collaboration is taking place between the relevant stakeholders, such as the City of Santa Clarita, the planning commission, and the project developers, and PCPOA to ensure a cohesive and integrated approach that considers the implications of the required zone change on the Dockweiler Extension?

Thank you for taking the time to address these questions. Your insights and clarification regarding the interplay between the approved Dockweiler Drive Extension and the proposed zone change for the Shadowbox Studios project will provide valuable information about the planning process and potential considerations in ensuring the successful integration of both developments.

Sincerely,

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to seek clarification on the potential implications and considerations regarding the Dockweiler Drive Extension in relation to the approval of the proposed Shadowbox Studios project. It has come to my attention that the Dockweiler Drive Extension was approved based on the current zoning in the North Newhall Area, while Shadowbox Studios, if approved, would require a zone change due to the significant difference in land usage from what is currently allowed in the General Plan. In light of this, I kindly request your response to the following questions:

If the proposed Shadowbox Studios project receives approval and necessitates a zone change, will this require the Dockweiler Drive Extension to be reopened? Are there any specific conditions or requirements associated with the extension's approval that may be affected by the zone change?

What other considerations come into play when evaluating the impact of the zone change for the Shadowbox Studios project? Are there any potential effects on the surrounding infrastructure, transportation network, or community development plans that need to be taken into account?

How does the requirement for a zone change align with the broader vision and goals of the North Newhall Area? Are there any potential challenges or conflicts that may arise from the proposed change in land usage, and how will they be addressed during the planning and approval process?

Will there be any additional studies, assessments, or evaluations conducted to analyze the potential impacts of the zone change and the proposed Shadowbox Studios project on the surrounding area? If so, what specific factors will be assessed, and how will the findings be integrated into the decision-making process?

Has there been any community input or engagement regarding the proposed zone change and its relationship to the Dockweiler Drive Extension? Were any public meetings, workshops, or consultations held to gather feedback and address concerns from residents and stakeholders?

Are there any alternative solutions or approaches being considered that would allow for the approval of the Shadowbox Studios project without requiring a zone change? If so, what are these alternatives, and what factors are being taken into account when evaluating their feasibility and suitability?

Thank you for taking the time to address these questions. I appreciate your insights and clarification regarding the potential implications of the zone change for the Shadowbox Studios project and the Dockweiler Drive Extension. Understanding the relationship between these two aspects will provide valuable information for the decision-making process and the overall development plans in the North Newhall Area.

Sincerely,

Name: Felix De Bee

Address: 23556 Via Batta Valencia CA 91355

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I have several questions regarding wildfire safety in light of the presence of the proposed Shadowbox Studios in Placerita Canyon. Given the historical context of the 1962 firestorm that destroyed Melody Ranch Studios, I kindly request your insights and responses to the following:

What measures will be implemented to ensure the wildfire safety of the Shadowbox Studios and the surrounding areas? Has a comprehensive fire risk assessment been conducted to identify potential vulnerabilities and develop appropriate mitigation strategies?

Will the design and construction of the studios incorporate fire-resistant materials and construction techniques to minimize the risk of ignition and spread during a wildfire event? How will the studios be equipped with fire suppression systems to enhance their resilience in the face of wildfire threats?

Has there been collaboration with local fire departments and emergency services to develop an effective emergency response plan specific to the Shadowbox Studios project? How will coordination and communication be maintained during a wildfire incident to ensure the safety of studio personnel and the surrounding community?

Are there plans for the establishment of defensible space around the studios, including appropriate clearance of vegetation and the implementation of fuel modification strategies? How will the maintenance of defensible space be ensured to prevent the accumulation of flammable materials?

Will there be mandatory fire safety training and education programs for studio staff, contractors, and tenants to promote fire awareness and preparedness? How will fire drills and evacuation procedures be regularly practiced and updated?

Has the impact of the Shadowbox Studios on evacuation routes and emergency access to Placerita Canyon been considered? Are there plans for improving evacuation routes or establishing alternative emergency access points to ensure the safe evacuation of studio personnel and residents during a wildfire event?

Has public input been sought to gather concerns, suggestions, and experiences related to wildfire safety in Placerita Canyon? How have these perspectives influenced the planning commission's considerations and decision-making process regarding fire risk mitigation strategies for the Shadowbox Studios project?

I appreciate your attention to these questions and your commitment to wildfire safety in the planning and development of the Shadowbox Studios project. Your insights will contribute to a safer and more resilient community in the face of wildfire threats.

Sincerely,

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to address the potential utilization of the flyover Via Princessa bridge and to further inquire about the feasibility of establishing a secondary entrance from Circle J for the north parking lot of the proposed Shadowbox Studios project. It has been suggested that these solutions could collectively help alleviate traffic congestion at the Arch and 13th intersection, as well as enhance the overall traffic flow in the area. As it currently stands, ALL traffic must enter at the Arch and 13th Street intersection. I kindly request your insights and clarification on the following points:

Has the planning commission considered the feasibility of establishing a secondary entrance from Circle J for the north parking lot of the Shadowbox Studios project in conjunction with the utilization of the flyover Via Princessa bridge? Could this combined approach significantly alleviate traffic congestion and improve traffic flow at the Arch and 13th intersection?

What are the main benefits and challenges associated with implementing both a secondary entrance from Circle J and utilizing the flyover Via Princessa bridge? Are there any specific technical, engineering, or regulatory considerations that need to be evaluated to ensure the successful integration of these solutions?

Have any comprehensive traffic impact studies or assessments been conducted to analyze the potential effects of diverting vehicles through a secondary entrance from Circle J and utilizing the flyover Via Princessa bridge? How were these findings considered in the planning process, particularly in relation to traffic congestion at the Arch and 13th intersection?

Are there any ongoing discussions or plans to explore the feasibility of integrating a secondary entrance from Circle J and utilizing the flyover Via Princessa bridge into the overall transportation infrastructure plan for the Santa Clarita area? If not, would the planning commission be open to considering such options to address the current and future traffic concerns in the vicinity?

How would the establishment of a secondary entrance from Circle J and the utilization of the flyover Via Princessa bridge impact the overall transportation network in the area? Have there been any assessments conducted to determine the compatibility of these solutions with existing traffic patterns, roadways, and future developments in the vicinity?

Are there any specific conditions or restrictions that would need to be imposed if a secondary entrance from Circle J and the utilization of the flyover Via Princessa bridge were implemented to mitigate potential negative impacts or safety concerns?

Thank you for your attention to these expanded questions. Your insights and clarification regarding the feasibility of a secondary entrance from Circle J, in combination with the utilization of the flyover Via Princessa bridge, will provide valuable information to evaluate potential solutions for traffic congestion and improve transportation in the Santa Clarita area.

Sincerely,

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to seek clarification on the potential ramifications if the proposed Shadowbox Studios project does not receive approval from the Metropolitan Water District (MWD) for various aspects, namely (a) the use of MWD land for the north parking, (b) the emergency access route, (c) a possible secondary access to the north parking lot, and (d) the use of MWD property for a nursery to mitigate the impact on Alderbrook neighbors. I kindly request answers on the following matters:

What implications would arise if Shadowbox Studios does not receive approval from the Metropolitan Water District for the aforementioned land uses? Would the denial of such approvals significantly impact the feasibility and implementation of the project?

Has the planning commission considered the approval from the Metropolitan Water District as a condition for granting approval to the Shadowbox Studios project? Are there provisions or considerations in place to ensure that the necessary approvals from the MWD are obtained before proceeding with the proposed development?

If the approvals from the Metropolitan Water District are indeed considered as a condition for project approval, what mechanisms or processes are in place to monitor and verify the attainment of these approvals? Will there be a requirement for the applicant to provide evidence of approval from the MWD before the project can move forward?

Have there been any discussions or negotiations between the Shadowbox Studios project stakeholders, the City, and the Metropolitan Water District regarding the land uses in question? If so, what progress has been made in obtaining the necessary approvals, and what are the main points of contention or considerations that need to be addressed?

If the approvals from the Metropolitan Water District are not secured, what alternative solutions or mitigation measures are being explored to address the absence of north parking, emergency access routes, secondary access to the north parking lot, and the nursery for buffering impact on Alderbrook neighbors? Are there contingency plans or alternative arrangements being considered to ensure the project can proceed without reliance on MWD land?

Has there been any community input or engagement regarding the potential impact of not receiving the necessary approvals from the Metropolitan Water District? Were there any public forums, surveys, or consultations conducted to gather feedback and gauge the level of concern or support from residents and stakeholders in relation to this matter?

What steps, if any, are being taken to actively pursue the approvals from the Metropolitan Water District to secure the land uses required for the Shadowbox Studios project? Are there ongoing efforts to collaborate and work towards a resolution that satisfies the requirements and concerns of both the project stakeholders and the MWD?

Thank you for your attention to these questions. I greatly appreciate your insights and clarification regarding the potential implications of not receiving the necessary approvals from the Metropolitan Water District for the various land uses associated with the Shadowbox Studios project. Understanding the progress, considerations, and alternative measures being explored will provide valuable information regarding the future development plans and the overall feasibility of the project.

Sincerely,

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the potential requirement for an additional ingress and egress to the studio campus. I have several questions regarding this matter and would appreciate your response:

Could you please explain the reasoning behind the absence of discussion regarding the need for an additional ingress and egress to the Shadowbox Studios campus? What factors were considered to conclude that no additional access point is necessary?

Has a comprehensive traffic impact analysis been conducted to evaluate the potential effects of the proposed ingress and egress on the surrounding roadways? If so, what were the findings of this analysis and how were they considered during the planning process? Specifically, I noticed congestion on Railroad Avenue in the simulation presented during the May 16th Planning Commission meeting. How will this be addressed? What is the simulation's impact during the passing of a freight train (average 8 per day in 2017)?

How does the inclusion of an additional ingress and egress align with the broader transportation infrastructure plan for the Santa Clarita area? Does it harmonize with existing traffic patterns and roadways, or would it necessitate substantial modifications to the surrounding transportation network?

What measures will be taken to ensure that any new ingress and egress points are designed to minimize traffic congestion and prioritize safety for both studio personnel and the general public?

Are there any provisions or plans to enhance public transportation options to and from the Shadowbox Studios campus, considering the potential increase in traffic associated with the project?

Has the community been consulted or engaged in the decision-making process regarding the necessity of an additional ingress and egress? If so, what feedback has been received from residents and local businesses, and how has it influenced the planning commission's considerations?

Have alternative solutions or approaches been explored to address traffic concerns without requiring a new ingress and egress? If so, what were these alternatives, and why were they not deemed suitable for the project?

Will specific conditions or restrictions be imposed on the use of any new ingress and egress points to mitigate potential negative impacts? For instance, will there be limitations during peak traffic hours or the implementation of traffic control measures?

How will the effectiveness of the new ingress and egress points be monitored and evaluated once they are operational? Will mechanisms be in place to address unforeseen issues or make necessary adjustments?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the potential need for additional ingress and egress requirements.

Sincerely, Basilio Zamora

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I would like to inquire about the removal and relocation of oak trees from the proposed Shadowbox Studios project site. I would appreciate your insights and responses to the following:

How many oak trees are currently present on the project site, and what is the proposed plan for their removal or relocation? Has an inventory of the oak trees been conducted to assess their health, age, and ecological significance?

What criteria will be used to determine which oak trees will be removed and which will be relocated? Will efforts be made to prioritize the preservation of older, healthier, or more significant oak trees?

If relocation is proposed for some oak trees, what is the plan for their successful transplantation? Will a certified arborist or tree relocation expert be involved to ensure the proper techniques are used to minimize stress and maximize the survival rate of the transplanted trees?

Has there been consideration given to the impact of oak tree removal on the overall ecosystem and biodiversity of the project site? What mitigation measures are planned to compensate for any loss of habitat or potential impact on wildlife that rely on these oak trees?

Will there be any provisions or conditions of approval to ensure that replacement trees are planted as part of the project? If so, what species of trees will be selected, and what guidelines will be followed to ensure their successful establishment and long-term growth?

How will the removal or relocation of oak trees be coordinated with relevant environmental agencies and organizations to ensure compliance with applicable regulations and best practices for tree conservation?

Has public input been sought to gather concerns and suggestions regarding the removal or relocation of oak trees? How has this input influenced the planning commission's considerations and decision-making process regarding the protection and preservation of these valuable natural resources?

I appreciate your attention to these questions and your commitment to the responsible management of oak trees within the proposed Shadowbox Studios project. Your insights will help ensure the conservation of our local ecosystems and the preservation of our natural heritage.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about whether consideration has been given to allocating a portion of the Shadowbox Studios property to the City of Santa Clarita for the purpose of building a cultural center. This could serve as a valuable asset to the community and enhance the cultural offerings in the area. I

Has there been any discussion or consideration given to allocating a portion of the Shadowbox Studios property to the City of Santa Clarita for the development of a cultural center? If so, what factors were taken into account during the planning process, and what is the current status of these discussions?

Thank you for your attention to this question. I look forward to your insights and clarification regarding the consideration for a cultural center outside the Shadowbox Studios perimeter.

Sincerely,

Name: [illegible]

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to further inquire about the potential requirement for the studio project to make a cash donation to the Placerita Canyon Property Owners Association (PCPOA) as a condition of approval, with the intention of furthering preservation efforts within the canyon. I would appreciate your insights and response to the following questions:

In considering the potential requirement for a cash donation to the PCPOA, what specific factors would be taken into account to determine the appropriate amount? Would there be a methodology or criteria established to ensure that the donation adequately supports preservation efforts and the nonprofit's mission and aligns with the scale and impact of the proposed studio project?

Has the potential requirement for a cash donation to the PCPOA been discussed with the studio project applicant? What has been their response or position regarding this condition of approval? Are there any alternative proposals or mitigation measures that have been put forth by the applicant to address preservation concerns within the canyon?

What role does the Placerita Canyon Property Owners Association play in the decision-making process regarding the potential cash donation requirement? How would the association's expertise, input, and guidance be incorporated into determining the amount and utilization of the donation?

Has there been any analysis or assessment conducted to evaluate the potential impact and effectiveness of a cash donation in supporting preservation within the canyon? Are there any examples or precedents where similar donations have been implemented successfully in other projects to enhance conservation efforts and maintain the integrity of natural areas?

How would the potential cash donation requirement be communicated to the public and other stakeholders? What mechanisms would be in place to ensure transparency and accountability in the decision-making process?

Thank you for your attention to these additional questions. I greatly appreciate your insights and clarification regarding the potential requirement for the studio project to make a cash donation to the Placerita Canyon Property Owners Association as a condition of approval, aimed at supporting preservation within the canyon.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the established speed limits on Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street in relation to the proposed Shadowbox Studios project. Additionally, I am interested in understanding the considerations given to equestrian, pedestrian, and golf cart vehicles that share these roadways. I would appreciate your response to the following questions:

What are the established speed limits for Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street? Have there been any recent changes or updates to the speed limits in these areas?

Were there specific considerations taken into account when establishing the speed limits for these roadways to ensure the safety of equestrian riders, pedestrians, and golf cart users who share the same space?

Has there been an assessment conducted to evaluate the suitability of the established speed limits for accommodating equestrian, pedestrian, and golf cart traffic on these roadways? What factors were considered in determining the appropriate speed limits to balance the needs of different road users?

Are there any designated equestrian lanes, pedestrian pathways, or separate golf cart lanes planned or implemented along these roadways to enhance safety and promote the coexistence of various modes of transportation?

What safety measures or infrastructure improvements, if any, are planned or in place to protect equestrian riders, pedestrians, and golf cart users along Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street?

Have there been any community consultations or input from equestrian organizations, pedestrian advocates, or golf cart users regarding the speed limits and safety considerations on these roadways? If so, how have these perspectives influenced the decision-making process?

Will there be ongoing monitoring and evaluation of the road safety conditions and the effectiveness of the established speed limits in accommodating equestrian, pedestrian, and golf cart traffic? How will any identified issues or concerns be addressed and mitigated?

Are there plans for public education and awareness campaigns to inform residents, visitors, and drivers about the presence of equestrian riders, pedestrians, and golf cart users on these roadways and to promote safe and respectful interactions between different road users?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the established speed limits and considerations for equestrian, pedestrian, and golf cart vehicles on Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the established speed limits on Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street, as well as the considerations given for equestrian, pedestrian, and golf cart vehicles that share those roadways. I would appreciate your response to the following questions:

What are the established speed limits on Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street? Have these speed limits been determined based on standard traffic engineering practices and considerations for road safety?

Have there been any specific considerations given to equestrian traffic on these roadways, such as horseback riders or horse-drawn carriages? How will the speed limits and road design accommodate the safety and needs of equestrian users?

Are there designated equestrian lanes or paths along Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street to separate equestrian traffic from motor vehicle traffic? If not, what measures will be in place to ensure the safety of equestrian users?

What measures have been taken to ensure the safety of pedestrians and provide appropriate infrastructure, such as sidewalks or pedestrian crossings, along these roadways?

Are there any designated golf cart lanes or paths planned for Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street to accommodate golf cart traffic? If so, how will the speed limits and road design consider the presence of golf carts?

Have traffic calming measures, such as speed humps or roundabouts, been considered or implemented on these roadways to enhance safety for all users, including equestrian, pedestrian, and golf cart traffic?

Will there be educational initiatives or awareness campaigns to inform drivers about the presence of equestrian, pedestrian, and golf cart traffic on these roadways and promote safe interactions and responsible driving practices?

How will the effectiveness of the established speed limits and safety measures be monitored and evaluated? Will there be mechanisms in place to address any identified safety concerns or make adjustments as needed?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the established speed limits and considerations for equestrian, pedestrian, and golf cart vehicles on Dockweiler Drive, Placerita Canyon Road, 13th Street, Arch Street, and 12th Street.

Sincerely,

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the presence of a morality clause as a condition of approval for the Shadowbox Studios project, specifically addressing the prohibition of pornography production within the studio facilities. I understand the importance of upholding community standards and values, and I would appreciate your response to the following questions, which aim to gain a better understanding of the considerations and provisions in place:

Has there been any discussion or consideration regarding the inclusion of a morality clause in the conditions of approval for the Shadowbox Studios project to explicitly prohibit the production of pornography within the studio facilities? If so, what factors were taken into account in determining whether such a clause should be included or excluded?

If a morality clause is indeed being considered, how would it be defined and implemented? What criteria or guidelines would be used to determine what constitutes pornography production and ensure clarity in enforcing the clause?

Has the potential presence of a morality clause been discussed with the studio developers or any relevant parties involved in the Shadowbox Studios project? If so, what have been their reactions or responses to the idea?

Are there any legal or constitutional considerations that need to be taken into account when considering the inclusion of a morality clause? Has legal counsel been consulted to ensure that any proposed clause aligns with applicable laws and regulations?

If a morality clause is included as a condition of approval, how will compliance be monitored and enforced? What mechanisms will be in place to address any violations or disputes that may arise?

Has the community been consulted or involved in discussions regarding the potential inclusion of a morality clause? What feedback, if any, has been received from residents and local businesses regarding this matter?

Are there any precedents or examples from other similar projects or jurisdictions where a morality clause has been included to regulate the types of content produced within studio facilities? If so, what have been the outcomes and effectiveness of such clauses?

In the absence of a morality clause, what existing regulations or laws would govern the types of content that can be produced within the Shadowbox Studios facilities? Are there any limitations or restrictions already in place to ensure the responsible and lawful use of the studio space?

Thank you for your attention to these questions. I believe that addressing these concerns regarding a potential morality clause will contribute to a clearer understanding of the conditions and provisions associated with the Shadowbox Studios project.

Sincerely,

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my concerns regarding the lack of evacuation routes for residents of Placerita Canyon and the potential risks this poses in the event of a disaster, similar to the tragic events experienced by the residents of Paradise, California during the 2018 Camp Fire. I kindly request your insights and clarification on the following matters:

What evacuation routes are currently in place for residents of Placerita Canyon in the event of a disaster, such as a wildfire or other emergencies? Are there multiple routes available, and do they provide sufficient capacity to safely evacuate all residents in a timely manner? Same question for personnel on the Shadowbox site.

Has there been a comprehensive assessment of the potential risks and challenges associated with evacuating Placerita Canyon in the event of a large-scale emergency? If so, what were the findings of this assessment, and how have they influenced the planning and preparedness efforts for the area?

Are there any plans or initiatives in progress to establish additional evacuation routes or improve existing ones to enhance the safety and resilience of Placerita Canyon residents? If not, what considerations are being given to address this significant concern?

Has the planning commission taken into account the experience of the Paradise, California wildfire and its impact on the community's evacuation capabilities? Are there any lessons learned from that tragedy that are being applied to the planning and preparedness efforts in Santa Clarita, particularly in areas like Placerita Canyon?

What coordination and collaboration efforts are being undertaken between the City of Santa Clarita, emergency response agencies, and other relevant stakeholders to address the potential evacuation challenges faced by Placerita Canyon residents? Are there ongoing discussions or initiatives to ensure that residents have access to safe and efficient evacuation routes during emergencies?

Are there any plans to increase awareness among Placerita Canyon residents about emergency preparedness and evacuation procedures? How is the planning commission and the city working to educate and inform residents about the importance of being prepared for potential disasters and understanding evacuation protocols?

Is there an emergency management plan in place that specifically addresses the evacuation needs and considerations for Placerita Canyon residents? If so, could you provide an overview of the key elements of this plan and the steps taken to ensure its effective implementation?

Thank you for your attention to these questions. I greatly appreciate your insights and clarification regarding the lack of evacuation routes for Placerita Canyon residents and the potential risks associated with this situation. Understanding the measures being taken to address these concerns will contribute to the safety and well-being of the community.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express further concerns regarding the negative impact that the proposed Shadowbox Studios project could have on the evacuation routes for residents of Placerita Canyon. Specifically, the addition of approximately 3,000 vehicles and trucks associated with the studio could potentially exacerbate the challenges faced by residents during emergency evacuations. Improper planning doomed residents of Paradise, California in the 2018 Camp Fire. I kindly request your insights and clarification on the following matters:

Has there been a comprehensive analysis of the potential impact of the proposed Shadowbox Studios project on the existing evacuation routes for Placerita Canyon residents? Specifically, has the increased traffic volume and the presence of additional vehicles and trucks associated with the studio been taken into consideration?

Are there any specific measures or plans in place to mitigate the potential negative impact of the additional vehicles and trucks from the Shadowbox Studios project on the evacuation routes? If so, could you provide details on these measures and how they would ensure the safety and timely evacuation of residents during emergencies?

Has there been any assessment of the capacity and suitability of the existing evacuation routes to accommodate the increased traffic resulting from the Shadowbox Studios project? Are there any plans to expand or enhance the evacuation routes to ensure they can effectively handle the additional vehicles and trucks?

What coordination and collaboration efforts are being undertaken between the City of Santa Clarita, emergency response agencies, and Shadowbox Studios to address the potential impact on evacuation routes and ensure the safety of both residents and studio personnel during emergency situations?

Are there any plans or discussions to explore alternative evacuation routes or create dedicated emergency access roads that would separate the evacuation traffic from the traffic generated by the studio? If so, what progress has been made in these discussions, and how would these alternative routes be integrated into the overall evacuation plans?

How are the concerns and feedback of Placerita Canyon residents being taken into account in the planning and decision-making process? Have their concerns regarding the potential negative impact of the Shadowbox Studios project on evacuation routes been acknowledged and addressed?

Is there an ongoing monitoring and evaluation process in place to assess the effectiveness of the evacuation routes and the ability to handle the increased traffic volume resulting from the Shadowbox Studios project? How would any issues or deficiencies in the evacuation routes be identified and addressed in a timely manner?

Thank you for your attention to these additional concerns. I greatly appreciate your insights and clarification regarding the potential negative impact of the Shadowbox Studios project on evacuation routes and the measures being taken to ensure the safety and well-being of Placerita Canyon residents during emergencies.

Sincerely,

Name: LeAnn Belgau

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my concerns regarding the deficiencies in the Draft Environmental Impact Report (DEIR) for the Shadowbox Studios project, specifically related to the lack of consideration for land use and planning in Placerita Canyon. I believe it is crucial for the planning commission to acknowledge these deficiencies and provide city staff and consultants with the necessary resources to conduct a comprehensive Land Use and Planning study. I kindly request your attention to the following points:

The proposed voting district map designates Placerita Canyon residents in a minority district. Given its proposed minority status, it is essential to conduct a thorough study to assess the potential impacts of the Shadowbox Studios project on these residents. Has the planning commission recognized the need for a Land Use and Planning study to evaluate the project's effects on the land use patterns and planning considerations specific to Placerita Canyon?

The Draft EIR lists farm equipment as an example of an incompatible land use. As the roads surrounding Placerita Canyon are shared by tractors, horses, golf carts, pedestrians, and other types of livestock, it becomes evident that a comprehensive assessment of land use compatibility is necessary. Has the planning commission recognized the importance of conducting a Land Use and Planning study to address these potential conflicts and ensure the safety and coexistence of different modes of transportation and land uses?

How does the planning commission plan to address the deficiencies in the Draft EIR regarding the lack of consideration for land use and planning? Will there be an opportunity to conduct a supplemental analysis or update the EIR to include the necessary studies and evaluations? What steps will be taken to ensure that the project is thoroughly assessed in terms of its impact on land use patterns, planning considerations, and the safety of all road users in the Placerita Canyon area?

Has there been any community input or feedback regarding the deficiencies in the Draft EIR and the need for a comprehensive Land Use and Planning study? If so, how has this input been taken into account by the planning commission, and what actions are being considered to address these concerns?

Will the planning commission provide city staff and consultants with the necessary resources, time, and support to conduct a thorough Land Use and Planning study for the Shadowbox Studios project? How will the planning commission ensure that the study is comprehensive, objective, and considers all relevant factors, including land use compatibility, planning considerations, and the unique characteristics of Placerita Canyon?

I appreciate your attention to these matters and urge the planning commission to acknowledge the deficiencies in the Draft EIR and prioritize the conduct of a Land Use and Planning study. Addressing these concerns will help ensure a thorough evaluation of the project's impacts and promote the well-being and safety of the Placerita Canyon community. Thank you for your commitment to transparent and comprehensive decision-making processes.

Sincerely,

Name: Pamela L. Mello

Address: 24763 Golden Oak Lane Newhall, Ca 91321

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the omission of the study on land use in the Draft Environmental Impact Report (EIR) for the Shadowbox Studios project. It has come to my attention that the EIR mentions farm equipment as an example of incompatible land use, and I would like to understand the reasoning behind the exclusion of this study.

Why was the study on land use not included in the Draft EIR for the Shadowbox Studios project? Given that the EIR acknowledges farm equipment as an example of incompatible land use, it seems necessary to assess the potential impacts on the roads in and around Placerita Canyon that are shared by tractors, horses, golf carts, pedestrians, and other types of livestock.

What considerations were made in determining that the study on land use was not required for the project? Were there specific criteria or guidelines that influenced this decision, and were they consistent with the requirements outlined in the California Environmental Quality Act (CEQA) or other relevant regulations?

Have there been any assessments or analyses conducted to evaluate the potential conflicts or safety concerns arising from the shared use of roads by various modes of transportation, including farm equipment, equestrian activities, pedestrians, and other forms of livestock? If so, what were the findings of these assessments, and how have they been taken into consideration during the planning process?

Is there a plan in place to address any potential conflicts or safety issues related to incompatible land use and the shared use of roads surrounding Placerita Canyon? Are there measures being considered to ensure the safe coexistence of different modes of transportation, including the implementation of appropriate signage, road markings, designated lanes, or speed restrictions?

Have community members, residents, or relevant stakeholders expressed concerns regarding the potential conflicts arising from incompatible land use and the shared use of roads? If so, what feedback has been received, and how has it influenced the planning commission's considerations and decision-making process?

Will there be any provisions or conditions imposed on the Shadowbox Studios project to mitigate the potential conflicts or safety risks associated with incompatible land use? Are there plans to incorporate infrastructure improvements or design considerations that promote safe and efficient transportation for all users, taking into account the diverse modes of transportation in the area?

Is there an opportunity to conduct a supplemental analysis or update the Draft EIR to address the omission of the study on incompatible land use? If so, how will the planning commission ensure that all necessary studies and analyses are conducted to adequately assess the potential impacts of the project and comply with relevant environmental regulations?

Thank you for your attention to these inquiries. I greatly appreciate your insights and clarification regarding the exclusion of the study on incompatible land use in the Draft EIR for the Shadowbox Studios project. Understanding the rationale and any potential actions to address this omission will provide valuable information for assessing the project's compatibility with the existing land use patterns and ensuring the safety of all who use the roads.

I look forward to your response.

Sincerely,

Name: Russell L Mullen

Address: 24763 Golden Oak Lane - Newhall, Ca 91321

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to seek clarification regarding the absence of a study on land use in the Draft Environmental Impact Report (EIR) for the proposed Shadowbox Studios project. Specifically, I am interested in understanding why the potential impact of incompatible land uses, such as farm equipment, was not thoroughly examined in the environmental documents, as per CEQA.

Could you please provide an explanation as to why the issue of incompatible land use was not specifically studied in the Draft EIR for the Shadowbox Studios project? What were the factors or considerations that led to the omission of this topic from the environmental analysis?

Considering that the surrounding roads in the Placerita Canyon area are shared by various modes of transportation, including tractors, horses, golf carts, pedestrians, and other types of livestock, what measures were taken to assess the potential conflicts and impacts arising from incompatible land uses?

Was there any consideration given to the potential safety hazards or conflicts that may arise from the coexistence of different modes of transportation, including the operation of farm equipment, within the project area? If so, what were the findings and conclusions drawn from these considerations?

Has the issue of incompatible land use been raised by the community or relevant stakeholders during the public review process for the Shadowbox Studios project? If so, what concerns or feedback have been expressed, and how have these concerns been addressed or incorporated into the planning commission's considerations?

In light of the shared use of roads by various transportation modes, what steps will be taken to ensure the safety and well-being of all road users, including tractors, horses, golf carts, pedestrians, and other types of livestock, particularly in relation to the potential increase in traffic associated with the studio project?

Are there any plans or provisions to designate specific road sections or infrastructure improvements to accommodate the diverse range of transportation modes and ensure compatibility between different users?

Moving forward, what strategies or mitigation measures will be implemented to address any potential conflicts arising from incompatible land uses and ensure the safe coexistence of different modes of transportation within the project area?

Thank you for your attention to these questions. I greatly appreciate your insights and clarification regarding the absence of a study on incompatible land use in the Draft EIR for the Shadowbox Studios project. Understanding the considerations and any measures to address potential conflicts will provide valuable information for assessing the project's impact on the surrounding transportation network and the safety of all road users.

I look forward to your response.

Sincerely, Sharon Campbell

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

To the Santa Clarita Planning Commission,

I previously submitted a comment at the May 16, 2023 public hearing. This is a follow-up to those remarks. I referenced an article that published in the Los Angeles Business Journal on May 1, 2023, titled "Lights! Camera! Soundstages!" The front page, above-the-fold article (attached to this letter) took an in-depth look into what seems to be explosive growth throughout the LA Metro area and San Fernando Valley for the construction of new state-of-the-art studios.

There was no mention of Shadowbox Studios nor any Santa Clarita-based studio for that matter. There may be a reason for that. While technically in the 30-mile zone, producers still consider Santa Clarita too far to travel for most cast and crew. As a retired studio executive, I know this first-hand. There are exceptions, such as NCIS, which was one of my shows when I was at CBS Studios. Twenty years ago, space was not available in the Los Angeles region, so we came to Valencia converting multiple warehouses to soundstages and creating our own studio campus. To this day many of their workers – above and below the line – live and commute from the westside, Santa Monica, and Long Beach to name a few areas.

Understand when you hear there will be "local" employment, that is actually "Local" with a capital L, as in unions. Major studios are signatories to the collective bargaining agreements of the Association of Motion Picture and Television Producers (AMPTP). I was on the negotiating team of AMPTP for years in my capacity as a labor negotiator representing Paramount Pictures then later CBS Studios. I also spent 18 years with the Screen Actors Guild, so I understand both sides. If Shadowbox is unable to attract major studios to their rental facilities, then they will be required to attract smaller independents who may or may not be signatories to the collective bargaining agreements. If productions are not signatories, the city should be prepared for picketers outside the studio gate as they attempt to 'flip' a production and convert them to a union show.

This is not to say there won't be some economic benefit or local employment in Santa Clarita, but don't fool yourself in thinking all those jobs and money will stay here locally. Bottom line, Shadowbox touts its proposed facility as LA Metro. It is not. Some Santa Clarita influencers call us "Hollywood North" but that doesn't mean studios and production teams buy into the hype. It may have worked for Awesometown but it remains to be seen if it will work for Santa Clarita.

Sincerely,

Name: 

Address: 24760 Oakcrest Ave, Newhall 91321

Media: Soundstages Primed for Starring Roles

Continued from page 1

Yet even as entertainment companies reduce their ranks, massive soundstage projects are under development and construction all over the city. With 6.2 million square feet of soundstages, Los Angeles is the world leader in terms of overall stage space.

Meanwhile, other markets are gaining ground. According to **FilmLA**, the United Kingdom, which had only 3.5 million square feet of dedicated stage space just three years ago, now comes in second to Los Angeles with 5.4 million square feet. Ontario, Canada, ranks third with 3.8 million square feet followed by Georgia with 3 million, New York with 2.8 million and British Columbia with 2.4 million.

"All of these competitive jurisdictions have plans to expand existing infrastructure," said a FilmLA report.

The report noted that year-over-year shoot activity was down almost 20% in the fourth quarter of last year and that the film and TV industry is "being impacted by corporate restructuring and impending union negotiations which have caused many productions to pause." The Writers Guild of America is now in contract negotiations with the Alliance of Motion Picture and Television Producers, and the Directors Guild of America and Screen Actors Guild will soon follow.

"The present slowdown in production notwithstanding, Los Angeles cannot afford to lose its competitive edge when it comes to soundstages and other production infrastructure," said FilmLA President **Paul Audley**.

Many existing studio lots are planning expansions. In March, the **Murdochs' Fox Corp.** announced a $1.5 billion upgrade of the iconic Fox Studio Lot in Century City, where plans call for nine new soundstages that will bring the total to 24 plus, in addition to high-rise office buildings. Burbank's historic Warner Bros. Ranch will be redeveloped by **Worthe Real Estate Group** in a $500 million overhaul that will include 16 new soundstages, a multi-level parking structure, support facilities and a 320,000-square-foot office building. NBCUniversal will be adding eight soundstages as part of an overall update of its century-old Universal Studios lot.

Rendering: East End Capital's Arts District project will include 16 soundstages.

Independent challengers

Hackman Capital Partners, which in 2018 purchased CBS Television City for $750 million, plans to invest $1.25 billion, tripling the lot's soundstages and adding 1.9 million square feet of studio, office and retail facilities. Hackman Capital also has designs for a $1 billion expansion of the Studio City-based Radford Studio Center, which encompassed 18 soundstages and 210,000 square feet of offices when the Culver City firm purchased the property from **ViacomCBS** in 2021.

Founded by **Mikel Elliott**, Quixote Studios, with sites in Pacoima and Sylmar, offered soundstages to productions by such clients as Disney, Warner Bros., HBO, Sony, Paramount and NBCUniversal. At the time of its sale to **Hudson Pacific Properties** last year for $360 million, it had 325 employees, over 500 cast trailers, trucks and specialized vehicles; one of the industry's largest inventories of grip and lighting and production equipment; and long-term lease rights to 23 soundstages in Los Angeles and three in New Orleans.

Outside of the Quixote Studios acquisition, Hudson Pacific, in partnership with **Blackstone**, has acquired Sunset Gower, Sunset Bronson and Sunset Las Palmas studios. It is also building Sunset Glenoaks in Sun Valley, which will see 240,000 square feet on over 10 acres with seven sound stages. The Sunset portfolio includes more than 60 stages across five lots in Los Angeles and the United Kingdom.

Downtown Los Angeles will also see some major studio build-out. New York-based real estate investment firm **Atlas Capital Group** is redeveloping the building that once housed the Los Angeles Times printing press into a movie and television production lot with 17 soundstages near the Arts District. Atlas bought the 26-acre printing facility for more than $240 million in 2019, and the firm now plans to spend $650 million creating the movie studio. The site will include more than 300,000 square feet of production workspace and 212,300 square feet of offices along with screening theaters, fitness center and a nine-story parking garage. The printing plant itself will be redeveloped into 11 soundstages, production support, executive offices, a full-service restaurant with an outdoor patio, a commissary, café and fitness center. The project will be built in two phases, with the first phase due to be complete next year.

Arts District activity

East End Studios is in the process of developing a production campus in the Arts District at 6th and Alameda streets. The complex will feature 16 soundstages covering 321,520 square feet of studio space as well as 292,310 square feet of creative office space and 106,570 square feet of production support on an approximately 15-acre lot. Vehicular parking will total 1,327 spaces at an underground site. International architecture firm **Grimshaw** has been hired to design the project.

East End's project is currently going through slight redesigns and entitlements, aiming to be under construction in the third quarter of next year and completed in 2026.

Shep Wainwright, managing partner of **East End Capital**, the developer behind East End Studios, said the downtown Los Angeles location at 6th and Alameda was a natural choice for a studio.

"We've always been bullish on the Arts District," Wainwright said. "We have a 5-acre site in Boyle Heights that we're about to go with vertical construction just across the L.A. River. You already have Apple in the Arts District, Spotify, Warner Music and a number of smaller studios and some other studios that are contemplated. We think for a number of reasons it divides the east and west side of L.A. It's got great access for trucking. It was historically an industrial neighborhood so it works really well for a studio."

East End's Boyle Heights site is a 240,000-square-foot project that will start construction in the next 30 to 45 days.

East End is also developing two sites in Glendale: a 97,000-square-foot project that is under construction on S. Glendale Avenue on a 2.5-acre site, which will accommodate either two or three soundstages.

There is also the 9-acre facility called Griffith on San Fernando Boulevard that will break ground by year's end and will see 10 soundstages rise.

With all of the soundstages East End is developing, Wainwright does not anticipate any problem filling them up with production.

"The demand in Los Angeles, everything has been running at about 95% occupancy," Wainwright said. "Anytime a new facility gets delivered, it gets gobbled up either by year-over-year tenants or long-term tenancy. We feel it's the epicenter of episodic television and we don't think that's going anywhere. There's still a ton of demand for it."

Peter Hajimihalis, who is based at **Jones Lang LaSalle**'s downtown Los Angeles office, leases soundstage space for entities such as Hackman Capital Partners and East End Capital.

"In terms of the existing studios that are looking at reinvesting and modernizing, you have years that these studios haven't had big capital investments made into the lot," Hajimihalis said. He added that aside from feature films and television series, the studios will generate revenue from other types of product, including commercials and gaming.

"You'll always have demand in L.A. because of the talent living here and the below-the-line employees," he said.

The building of studio lots with soundstages is a relatively new phenomenon.

"If you look historically in Los Angeles, purpose-built soundstages haven't been built over the last 15 or 20 years other than some recent expansions that are just finishing up now," Hajimihalis said.

Previously, productions had to film in makeshift soundstages.

Meanwhile, developers such as East End's Wainwright are enjoying the process of providing the industry with soundstages.

"I love development," Wainwright said. "I love taking something from nothing and turning it into something, regardless of what asset class it is. But (production studios are) an especially exciting one because there's a whole operational component to it that's very hands-on."

EAST END CAPITAL

EAST END CAPITAL

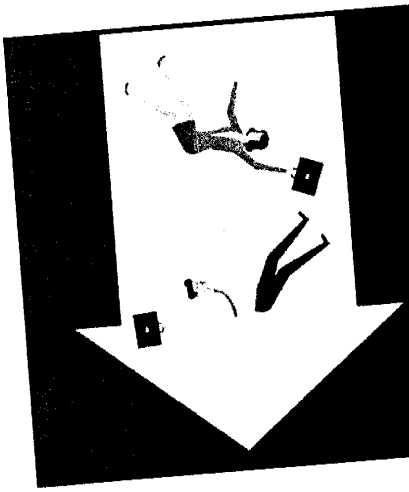
HEADQUARTERS: Glendale

YEAR FOUNDED: 2010

BUSINESS: Commercial real estate development

PARTNERS: Shep Wainwright, Jonathan Yormak, David Peretz

NOTABLE: East End purchased the warehouse properties for their East 6th Street and Alameda Street production campus last June for $240 million.



ECONOMIC DOLDRUMS

Americans have never been more downbeat about the economy, at least not in the 17 years that CNBC has been conducting its All-America Economic Survey. A record 69% hold negative views about the economy both now and in the future, according to the survey released April 18.

About two-thirds of Americans surveyed said their wages are falling behind inflation, and two-thirds said the nation is headed for recession. High interest rates are another concern.

Only 24% say now is a good time to invest in stocks, also the lowest reading in the survey's history.

LOS ANGELES BUSINESS JOURNAL POLL

What's your view of the overall economy now and in the future?

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

To the Santa Clarita Planning Commission,

I am writing to express my deep concerns regarding the proposed Shadowbox Studios project and its suitability for the chosen location. As a resident of this community, I believe it is important to consider the potential negative impact such a development could have on the surrounding area.

To illustrate my point, I want to draw your attention to the unfortunate situation experienced by the Santa Clarita Soccer Center. For decades, the center provided indoor soccer entertainment on Soledad Canyon Road, bringing joy and recreational opportunities to our community. However, as time passed, housing was constructed around the center, and soon enough, residents began to complain about the noise generated by the activities at the soccer center.

Despite operating well within its rights and having been an established part of the community for years, the soccer center was eventually forced to relocate. It was a classic case of "first in, first out" where the developer, knowing full well the nature of the surrounding community, gained approvals to build and sell homes. Then, when the new residents started to complain, the original land user, the soccer center, was unfairly pushed out.

This example serves as a cautionary tale of the consequences that can arise when incompatible land uses are not properly assessed and considered during the planning and approval process. It highlights the importance of preserving the integrity and character of existing businesses and activities that contribute to the unique fabric of our community.

I believe it would be deeply regrettable to repeat the same pattern with the proposed Shadowbox Studios project. We must take into account the potential impact it could have on the surrounding area and its existing residents. It is essential that we protect the rights and livelihoods of those who have long been part of our community, rather than allowing a new development to displace and gentrify them.

I implore you to carefully consider the appropriateness of the location for the Shadowbox Studios project. Let us learn from past mistakes and ensure that any future developments are compatible with the existing community and its needs. It is our shared responsibility to promote harmonious coexistence and protect the interests of all involved.

Thank you for your attention to this matter. I trust that you will take my concerns and the experiences of the Santa Clarita Soccer Center into consideration before blindly approving the proposed project.

Sincerely,

Name: Rachel Cook

Address: 24760 Oakcreek Ave, Newhall. CA 91321

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

To the Santa Clarita Planning Commission,

My name is Roy, and I am writing to you as a concerned resident of Placerita Canyon. I'm the son of Lola, or as many of you know her, "the Egg Lady." I have my own business and help my mom on the property. I've grown up in this peaceful neighborhood, and I can't help but express my frustration and disbelief regarding the proposed Shadowbox project and its potential impact on our community.

So here's my question: Would any planning commissioner or the people in charge of this city want this enormous studio and essentially a freeway going through their own peaceful neighborhoods? It's easy to shove some fancy idea down someone's throat as long as it doesn't disrupt their own way of life. But what about us? What about the residents who have built their lives and homes here in Placerita Canyon?

Believe me, I've contemplated going to City Hall and raising holy hell, but I know it won't get us very far. I have a short temper, and I don't do well with stupid people who lack basic common sense. And let me tell you, it doesn't take a genius to figure out that this massive mess of a project just won't work. It's a giant catastrophe waiting to happen, and it will irreversibly change our neighborhood.

What baffles me the most is that decisions are being made by people who don't even live here. How can they possibly understand our community when no one is given more than 3-minutes to speak at a meeting? They should experience the consequences of their decisions firsthand. Let them have this mess in their own neighborhood and see how they like it.

All I can say is that if we, the residents, don't get involved and stand together, they're going to ruin our neighborhood. We need to fight for what we believe in and protect the place we call home. Our voices matter, and it's time we make them heard.

I urge you, as planning commissioners and city officials, to consider the impact of this project on the lives of the people who have invested their time, effort, and love into Placerita Canyon. Think about the disruption it will cause, the loss of peace and livelihood, and the irreversible damage it will inflict on our community.

Please, listen to us, the ones who will have to live with the consequences of your decisions. We ask you to prioritize the well-being and safety of the residents over any short-sighted, profit-driven agenda. Let us preserve Placerita Canyon for future generations.

Thank you for taking the time to read my concerns. I hope you will seriously reconsider the impact of the Shadowbox project and stand with the residents of Placerita Canyon.

Sincerely,

Name:

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the Dockweiler Drive extension. I have a question regarding the traffic plan if the construction for both the Dockweiler Drive extension and the studio campus were to be done concurrently. I would appreciate your response to the following question:

If the construction for the Dockweiler Drive extension and the studio campus were to occur simultaneously, what specific traffic plan or measures will be implemented to address the potential increase in construction-related traffic and ensure the smooth flow of vehicles in the area?

Thank you for your attention to this question. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the coordination of traffic management in the event that both the Dockweiler Drive extension and the studio construction are carried out concurrently.

Sincerely,

Name: Kyra Madsen

Address: 4069 Syracuse Ave Keton CA 93570

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the proposed Shadowbox Studios project and the potential scenario where construction for the Dockweiler Drive extension and the studio campus are done concurrently. I have concerns regarding the traffic plan in such a situation, and I would appreciate your response to the following questions:

If the construction for the Dockweiler Drive extension and the studio campus is done concurrently, what is the planned traffic management strategy to mitigate congestion and ensure the safe movement of vehicles in the area?

Has a comprehensive traffic plan been developed to address the potential challenges and impacts of simultaneous construction activities? What measures will be implemented to minimize disruptions to local traffic flow and surrounding neighborhoods?

Will there be specific construction-related traffic control measures, such as temporary traffic signals, detour signs, or flaggers, to ensure the smooth and orderly flow of vehicles during the construction phase?

How will the traffic plan account for the increased volume of construction vehicles, as well as the regular commuter and resident traffic, to minimize delays and potential safety hazards?

Are there designated construction vehicle routes or staging areas to prevent congestion on nearby roads and minimize conflicts with regular traffic patterns?

Will there be ongoing coordination and communication between the construction management team, local authorities, and traffic control agencies to address any unforeseen traffic issues and implement timely adjustments to the traffic plan?

Has there been consideration given to the potential impact on public transportation routes and services during concurrent construction activities? Will there be any alternative transportation options provided or adjustments made to accommodate public transit users?

How will the effectiveness of the traffic plan during concurrent construction be monitored and evaluated? Will there be mechanisms in place to address any issues that may arise and ensure continuous improvement throughout the construction process?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the proposed Shadowbox Studios project and the traffic plan if construction for the Dockweiler Drive extension and the studio campus is done concurrently.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the current status of the applicant's request to the California Public Utilities Commission (CPUC) regarding the designation of the 13th Street rail crossing as a quiet zone. I am interested in understanding the progress and outcome of this request, and would appreciate your response to the following questions:

Has the applicant submitted a formal request to the CPUC for the designation of the 13th Street rail crossing as a quiet zone? If so, when was the request submitted, and has it been acknowledged or reviewed by the CPUC?

What is the process and timeline for the CPUC's evaluation and decision-making regarding the quiet zone designation? Are there any specific criteria or requirements that need to be met in order to qualify for a quiet zone designation?

Has the CPUC conducted any inspections, studies, or assessments of the 13th Street rail crossing to evaluate its suitability for a quiet zone designation? If so, what were the findings of these evaluations, and how were they taken into consideration during the decision-making process?

Have there been any consultations or coordination between the applicant, the Santa Clarita Planning Commission, and the CPUC regarding the quiet zone request? If so, what has been the nature of these interactions, and what feedback or guidance has been provided by the CPUC?

What is the anticipated timeline for a decision by the CPUC regarding the quiet zone designation for the 13th Street rail crossing? Will there be a public announcement or notification once a decision is reached?

If the quiet zone designation is approved by the CPUC, what specific measures or modifications will be implemented at the 13th Street rail crossing to comply with the requirements and ensure a quieter and safer environment?

If the quiet zone designation is not approved, what alternative solutions or strategies are being considered to address any concerns related to noise and safety at the 13th Street rail crossing?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the status of the applicant's request to the CPUC for the designation of the 13th Street rail crossing as a quiet zone.

Sincerely,

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express concerns about the lack of evacuation routes for residents of Placerita Canyon and the potential for a disaster similar to what occurred in Paradise, California during the devastating Camp Fire in 2018. Given the geographical characteristics of Placerita Canyon and the potential risks associated with wildfire or other emergencies, I kindly request your insights and clarification on the following matters:

Has there been a comprehensive assessment of the evacuation routes available to residents of Placerita Canyon in the event of a wildfire or other emergency? If so, what were the findings of this assessment, and what measures have been taken to address any identified limitations or challenges?

The back gate of the private road leading to Sierra Highway can only be accessed by residents who are privledged to pay for and receive a gate card. There is NO outbound egress without a gate card. Many canyon residents are on limited fixed incomes and cannot afford a gate pass. What considerations have the city, consultants, and commissioners made for this obvious limitation as a viable emergency evaculation route?

Considering the potential risks and vulnerabilities of Placerita Canyon, what specific emergency preparedness plans and strategies have been put in place to ensure the safety and evacuation of residents in the event of a disaster? Are there designated evacuation zones, emergency shelters, or communication systems established to facilitate an efficient and effective response?

Given the experiences and lessons learned from the Camp Fire in Paradise, California, has there been any proactive evaluation of the risks and potential hazards in Placerita Canyon to prevent a similar disaster? Have any measures, such as improved infrastructure, enhanced warning systems, or community education initiatives, been implemented to mitigate these risks and enhance the safety of residents?

Have the residents of Placerita Canyon been actively involved in the discussions and planning processes related to emergency preparedness and evacuation routes? Has their input and feedback been considered in the development of strategies and solutions to address these concerns?

What coordination and collaboration have taken place between the City of Santa Clarita, emergency response agencies, and other relevant stakeholders to ensure effective emergency management and evacuation plans for Placerita Canyon? Are there ongoing partnerships or initiatives in place to continually assess and improve the preparedness and response capabilities in the area?

Are there any plans or proposals to establish additional evacuation routes or alternative means of egress for residents of Placerita Canyon? If not, what are the main factors or challenges that prevent the implementation of such routes, and what steps are being taken to address these concerns?

In the event that immediate evacuation is not possible, what measures are in place to ensure the safety and well-being of residents, including the protection of livestock, pets, and other valuable assets? Are there established protocols for sheltering in place or providing temporary accommodations until evacuation can be safely conducted?

Thank you for your attention to these questions. I greatly appreciate your insights and clarification regarding the evacuation routes for residents of Placerita Canyon and the measures in place to ensure their safety during emergencies. Understanding the efforts and considerations related to emergency preparedness will help address the concerns of the community and ensure the overall well-being of the residents.

Sincerely,

Name: James Reick

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my concerns regarding the deficiencies in the Draft Environmental Impact Report (EIR) for the Shadowbox Studios project and the need for a comprehensive Land Use and Planning study. Specifically, I would like to address the following issues:

Voting District Map: It has come to my attention that Placerita Canyon residents have been designated in a minority district in the proposed voting district map currently before the City Council. Given their minority status, it is crucial to conduct a study to evaluate the potential impacts of the Shadowbox Studios project on these residents in terms of land use and planning. Will the planning commission acknowledge the need for such a study and ensure that it is conducted to address the concerns of the affected residents?

Disregard for Land Use and Planning in the Draft EIR: The Draft EIR for the Shadowbox Studios project failed to adequately consider land use and planning aspects, despite listing farm equipment as an example of an incompatible land use. It is evident that the roads surrounding Placerita Canyon are shared by various modes of transportation, including tractors, horses, golf carts, pedestrians, and other types of livestock. In light of this, I urge the planning commission to recognize the deficiencies in the Draft EIR and allow city staff and consultants the necessary time and resources to conduct a thorough Land Use and Planning study.

Evaluating Compatibility and Impacts: A comprehensive Land Use and Planning study would be instrumental in assessing the compatibility of the Shadowbox Studios project with the existing land use patterns and the potential impacts on the surrounding areas. This study should take into account the shared use of roads, potential conflicts, safety concerns, and the well-being of the community members, residents, and stakeholders. Will the planning commission prioritize the completion of a thorough study to address these critical aspects of the project?

Ensuring Compliance with Environmental Regulations: Conducting a Land Use and Planning study would not only fulfill the requirements of environmental regulations but also ensure that all necessary analyses and assessments are conducted to adequately evaluate the project's impacts. By addressing the deficiencies in the Draft EIR and allowing for a comprehensive study, the planning commission can demonstrate its commitment to upholding environmental regulations and making informed decisions.

I kindly request that the planning commission carefully consider these concerns and take appropriate action to rectify the deficiencies in the Draft EIR. By conducting a comprehensive Land Use and Planning study, you would ensure that the impacts of the Shadowbox Studios project are thoroughly evaluated and that the concerns of the affected residents and stakeholders are properly addressed.

Thank you for your attention to these matters. I trust that you will give due consideration to the need for a Land Use and Planning study and take the necessary steps to ensure a thorough evaluation of the Shadowbox Studios project.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the current status of the applicant's request to the California Public Utilities Commission (CPUC) regarding the designation of the 13th Street rail crossing as a quiet zone, as well as the safety risks associated with vehicles, pedestrians, cyclists, and other road users. I would appreciate your response to the following questions:

What is the current status of the applicant's request to the CPUC for the designation of the 13th Street rail crossing as a quiet zone? Has the request been submitted, and if so, what is the timeline for the CPUC's decision-making process?

Have safety concerns related to vehicles, pedestrians, cyclists, and other road users been addressed in the applicant's request for the quiet zone designation? How were these safety risks identified and what measures have been proposed to mitigate them?

What potential safety benefits are anticipated with the designation of the 13th Street rail crossing as a quiet zone? How will the designated quiet zone enhance safety for vehicles, pedestrians, cyclists, and other road users in the vicinity of the rail crossing?

Were there any safety studies or assessments conducted to evaluate the current risks associated with the 13th Street rail crossing? If so, what were the findings and how do they inform the request for a quiet zone designation?

In the absence of a designated quiet zone, what safety measures are currently in place to mitigate the risks to vehicles, pedestrians, cyclists, and other road users at the 13th Street rail crossing?

Will there be ongoing monitoring and evaluation of safety conditions and risks at the 13th Street rail crossing, regardless of the outcome of the quiet zone designation request? How will any identified safety concerns be addressed and mitigated?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the status of the applicant's request for the designation of the 13th Street rail crossing as a quiet zone, and the safety considerations associated with vehicles, pedestrians, cyclists, and other road users.

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire further about the considerations and conditions of approval regarding the limitation of hours and days of operation for the proposed Shadowbox Studios project. Understanding the importance of balancing the needs of the studio with the well-being of the surrounding community, I would appreciate your insights and response to the following questions:

What specific factors were taken into consideration when determining the limitations on the hours and days of operation for the Shadowbox Studios project? Were there any studies or assessments conducted to evaluate the potential impacts on noise levels, traffic, or other aspects that could affect the quality of life for nearby residents?

How were the concerns and feedback of the local community and neighboring businesses taken into account during the decision-making process regarding the limitations on operating hours and days? Were there any public hearings or opportunities for public input where residents could voice their concerns and preferences?

Will the limitations on operating hours and days be consistent throughout the year, or are there provisions for potential variations during certain periods or specific circumstances? For example, will there be different restrictions during weekends, holidays, or times when there are special events or productions taking place?

Are there mechanisms in place to monitor and enforce compliance with the limitations on operating hours and days? What measures will be taken to address any instances of non-compliance or violations?

Has there been any consideration given to potential adjustments or amendments to the limitations on operating hours and days in the future, based on feedback from the community, changes in circumstances, or other relevant factors? Will there be an opportunity for periodic review and assessment to ensure that the limitations remain appropriate and effective?

What measures will be implemented to communicate and ensure awareness of the operating hour limitations to the studio personnel, visitors, and the general public? Will there be clear signage, notifications, or other means of providing information about the designated operating hours and days?

How will the impacts of the limitations on operating hours and days be evaluated and assessed over time? Will there be a process in place to gather feedback from the community and evaluate the effectiveness of the imposed restrictions in mitigating any potential adverse effects?

Thank you for your attention to these questions. I understand the importance of establishing appropriate limitations on operating hours and days for the Shadowbox Studios project, and I appreciate your thorough insights and clarification regarding the considerations and conditions of approval in this regard.

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the considerations and conditions of approval regarding the limitation of hours and days of operation for the proposed Shadowbox Studios project. Given the potential impact on the surrounding community, I would appreciate your insights and response to the following questions, which seek to explore the reasoning and implications of such limitations:

What specific factors were taken into consideration when determining the limitations on the hours and days of operation for the Shadowbox Studios project? Were considerations such as noise levels, traffic impact, and compatibility with the surrounding residential areas taken into account?

Has there been any consultation or engagement with the community, residents, and local businesses to gather feedback and input regarding the desired limitations on the operating hours and days of the studio facilities? If so, what were the main concerns or preferences expressed by the community, and how were they incorporated into the conditions of approval?

Will there be a clear and enforceable schedule or set of guidelines outlining the permitted hours and days of operation for the Shadowbox Studios project? How will compliance with these limitations be monitored and enforced to ensure that the agreed-upon conditions are met?

Has there been any consideration given to the potential need for flexibility in the limitations on operating hours and days? For instance, are there provisions in place to accommodate special events, time-sensitive productions, or other circumstances that may warrant deviation from the standard operating schedule?

How will the limitations on hours and days of operation be communicated to the public, particularly to the surrounding community? Will there be efforts to provide clear and easily accessible information to ensure that residents and stakeholders are aware of the agreed-upon schedule and any changes or updates that may occur?

What mechanisms or procedures will be in place to address any concerns or complaints from the community regarding non-compliance with the limitations on operating hours and days? How will these issues be resolved and any necessary adjustments made to ensure that the operations of the studio facilities are in line with the approved conditions?

Thank you for your attention to these questions. I understand the importance of striking a balance between the needs of the Shadowbox Studios project and the well-being of the surrounding community, and I appreciate your insights and clarification regarding the considerations and conditions of approval for limiting the hours and days of operation.

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire further about the considerations and conditions of approval regarding the limitation of hours and days of operation for the proposed Shadowbox Studios project. Recognizing the significance of this aspect in fostering harmonious coexistence between the studio and the surrounding community of Placerita Canyon, I would appreciate your comprehensive response to the following questions:

In determining the limitations on the hours and days of operation, what specific methodologies or studies were utilized to assess the potential impact on noise levels and traffic patterns in the vicinity of the Shadowbox Studios project? Were there any noise and traffic impact assessments conducted to inform the decision-making process?

How were the concerns of the community regarding potential disruptions and inconveniences taken into account when establishing the limitations? Were there any public hearings, consultations, or surveys held to gather input from residents, local businesses, and other stakeholders regarding their preferences and expectations for the operating schedule?

Will the limitations on operating hours and days be subject to periodic review and potential revision based on the actual impact observed during the initial phases of the Shadowbox Studios project? How will the planning commission assess the effectiveness of the established limitations and consider adjustments if necessary?

Are there any specific criteria or guidelines that were considered when determining the appropriate hours and days of operation? For instance, were peak traffic hours, school schedules, or other relevant factors taken into consideration to minimize potential conflicts and ensure the least possible disruption to the surrounding community?

How will the enforcement of the limitations on operating hours and days be managed? Will there be designated personnel responsible for monitoring compliance, and what measures will be in place to address any violations or non-compliance by the studio operators?

Has there been consideration given to any potential exceptions or allowances for special circumstances, such as major film productions, events of significant public interest, or collaborative initiatives with local organizations? How will such exceptions be evaluated and approved to strike a balance between accommodating unique opportunities and maintaining the integrity of the agreed-upon limitations?

What communication strategies will be implemented to ensure effective dissemination of information regarding the limitations on operating hours and days? Will the studio operators be required to inform their staff, clients, and visitors about these restrictions to foster awareness and adherence?

Thank you for your attention to these additional questions. I believe that a thorough understanding of the considerations and conditions surrounding the limitation of hours and days of operation is crucial in promoting a mutually beneficial relationship between the Shadowbox Studios project and the surrounding community.

Sincerely,

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire further about the considerations and conditions of approval regarding the limitation of hours and days of operation for the proposed Shadowbox Studios project. It is essential to thoroughly understand the implications and potential impacts of these limitations on both the studio operations and the surrounding community. I kindly request your insights and response to the following questions:

How were the specific limitations on the hours and days of operation determined? Were there any studies or assessments conducted to evaluate the potential noise, traffic, or other impacts associated with the studio's activities during different times of the day or week?

Has there been any analysis or evaluation of similar studio projects or establishments in the area to assess the effectiveness and feasibility of the proposed limitations? Were there any lessons learned or best practices identified during this process?

Are the limitations on operating hours and days intended to be permanent, or will they be subject to periodic review and potential adjustment based on monitoring and feedback from the community and relevant stakeholders? If there are provisions for review, what will be the criteria and process for evaluating the need for any changes to the limitations?

Have the limitations on hours and days of operation been designed to strike a balance between the needs of the studio project and the quality of life for nearby residents? Were there any compromises or adjustments made during the planning process to address concerns and ensure a harmonious coexistence between the studio operations and the community?

Will there be any measures or conditions in place to address potential exemptions or special circumstances that may arise, such as for productions with unique scheduling requirements or events of significant cultural or economic importance? How will the determination of such exemptions be made, and will there be mechanisms for community input or notification regarding these exceptions?

Has there been consideration given to the potential economic impacts and benefits of the limitations on hours and days of operation? Specifically, how will the conditions strike a balance between fostering the growth and success of the studio project and ensuring the well-being and interests of the surrounding businesses and local economy?

How will the enforcement of the limitations on operating hours and days be handled? Will there be a designated authority responsible for monitoring compliance and addressing any violations, and what will be the consequences for non-compliance?

Has there been any analysis or discussion regarding the potential future adjustments to the limitations on hours and days of operation, considering the anticipated growth and development of the studio project over time? Will there be provisions for reevaluating and potentially revising the limitations to accommodate the evolving needs and circumstances of the studio and the community?

Thank you for your attention to these additional questions. I greatly appreciate your insights and clarification regarding the considerations and conditions of approval for limiting the hours and days of operation for the Shadowbox Studios project. Understanding the thoroughness of the planning and decision-making process will help to ensure a well-balanced and mutually beneficial relationship between the studio and the surrounding community.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the possible inclusion of a morality clause as a condition of approval for the Shadowbox Studios project, specifically regarding the prohibition of the production of pornography within the studio facilities. I would appreciate your response to the following question:

Will there be a morality clause included as a condition of approval for the Shadowbox Studios project that explicitly prohibits the production of pornography within the studio facilities?

Thank you for your attention to this question. I look forward to your clarification regarding the presence or absence of a morality clause related to the production of pornography within the Shadowbox Studios facilities.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the potential future of the Shadowbox Studios project in light of industry considerations regarding geographical desirability and the availability of new studio inventory in Los Angeles. Given the fickleness of the entertainment industry, I would appreciate your response to the following questions:

How has the geographical desirability of Santa Clarita (or lack thereof), particularly in relation to the entertainment industry, been taken into account during the planning process for the Shadowbox Studios project? Were any market assessments or industry studies conducted to evaluate the demand for studio space in the area?

In light of the construction of new studio inventory throughout Los Angeles, what measures or strategies are in place to attract tenants and ensure the utilization of the sound stages within the Shadowbox Studios project?

Has there been any analysis or contingency planning conducted regarding the potential scenario where some or most of the sound stages within the Shadowbox Studios project are not rented? What steps will be taken to mitigate any adverse effects or address the challenges associated with underutilization?

Are there any alternative uses or strategies that have been considered for the studio facilities in the event of low occupancy or unrented sound stages? For example, are there plans to diversify the use of the space to accommodate other types of production or creative endeavors?

What collaborations or partnerships, if any, are being pursued to attract and support the demand for studio space in Santa Clarita? Are there initiatives to foster connections with industry professionals, production companies, or content creators to promote the utilization of the Shadowbox Studios facilities?

Will there be regular assessments or evaluations conducted to monitor the demand and occupancy of the sound stages within the Shadowbox Studios project? How will any identified challenges or opportunities be addressed to ensure the long-term viability and success of the studio facilities?

Has there been any consideration given to potential incentives or support programs to attract tenants and encourage the utilization of the Shadowbox Studios facilities, especially in a competitive market environment?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the future of the Shadowbox Studios project in relation to industry considerations and the potential demand for studio space in Santa Clarita.

Sincerely,

Name: STEVE BACON

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the potential future scenario of the Shadowbox Studios project in the event that some or most of the sound stages remain unrented, considering the perception among industry insiders that Santa Clarita is an area of last resort in terms of geographical desirability. I would appreciate your insights and response to the following questions:

Has there been a market analysis conducted to assess the demand for studio space in the Santa Clarita area, taking into account the competition from new studio inventory being constructed throughout Los Angeles?

What measures or strategies are in place to attract tenants and ensure the occupancy of the sound stages within the Shadowbox Studios project? Have any agreements or partnerships been established with production companies, studios, or industry stakeholders to promote the utilization of the studio facilities?

If some or most of the sound stages within the Shadowbox Studios project remain unrented, what contingency plans or alternative uses are envisioned for the vacant spaces? Has there been consideration given to repurposing the unused areas to serve other creative or commercial purposes?

How does the planning commission address the concerns raised by industry insiders regarding Santa Clarita being perceived as an area of last resort in terms of geographical desirability? Are there any initiatives or plans in place to enhance the appeal and competitiveness of the Santa Clarita area as a filming destination?

Are there any incentives or support programs available to attract production companies and encourage them to choose the Shadowbox Studios facilities over other options in Los Angeles?

Has the potential impact of unrented sound stages on the local economy and job market been assessed? What steps will be taken to minimize any negative consequences and maximize the economic benefits associated with the operation of the Shadowbox Studios project?

Will there be regular monitoring and evaluation of the occupancy rates and overall success of the Shadowbox Studios project? How will any identified challenges or issues be addressed and mitigated to ensure the long-term viability of the studio facilities?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the potential future scenario of the Shadowbox Studios project in light of industry perceptions and the competition from new studio inventory in Los Angeles.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the presence of a morality clause as a condition of approval for the Shadowbox Studios project, specifically addressing the prohibition of pornography production within the studio facilities. Given the sensitive nature of the subject, I would appreciate your response to the following questions, which seek to explore the considerations and rationale behind the decision:

Has the issue of prohibiting pornography production within the Shadowbox Studios facilities been discussed and considered during the planning process? If so, what were the factors and considerations taken into account when making a decision regarding the inclusion or exclusion of a morality clause?

What legal and ethical considerations were evaluated in determining whether to include a morality clause as a condition of approval? Were any local, state, or federal laws taken into account in relation to the production and distribution of pornography?

What are the potential social, cultural, and community impacts that were considered when discussing the inclusion or exclusion of a morality clause? Were there any concerns raised by community members, advocacy groups, or other stakeholders regarding the potential production of pornography within the studio facilities?

If a morality clause prohibiting pornography production is included as a condition of approval, what specific measures will be in place to enforce and monitor compliance with this clause? How will violations be addressed and resolved?

Were there any discussions about the constitutionality or potential legal challenges associated with including a morality clause that restricts certain forms of content production within the studio facilities?

In the absence of a morality clause, what other measures, if any, will be implemented to ensure responsible content production and compliance with relevant laws and regulations within the Shadowbox Studios facilities?

Have there been any precedents or examples from other similar studio projects or jurisdictions that were considered when making a decision regarding the inclusion or exclusion of a morality clause?

Thank you for your attention to these questions. I understand the sensitive nature of this topic and appreciate your thorough insights and clarification regarding the presence or absence of a morality clause addressing pornography production within the Shadowbox Studios project.

Sincerely,

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to seek clarification regarding the absence of a study on incompatible land use in the Draft Environmental Impact Report (EIR) for the proposed Shadowbox Studios project. I have noticed that in the CEQA documents, farm equipment is listed as an example of incompatible land use. Given the shared use of roads surrounding Placerita Canyon by various modes of transportation, including tractors, horses, golf carts, pedestrians, and other types of livestock, I would appreciate answers on the following matters:

Why was there no specific study conducted to assess the potential compatibility issues between the proposed Shadowbox Studios project and the existing land uses in the surrounding area, particularly in relation to the shared roadways?

Considering the presence of tractors, horses, golf carts, pedestrians, and other types of livestock in the vicinity of Placerita Canyon, what factors were taken into consideration in determining the compatibility of the proposed studio project with these existing land uses?

Placerita Canyon has been carved into the proposed voting district maps as a minority district. Yet, did not receive consistent consideration as a minority population for land use study in the Draft EIR. Is seems a flaw in the study conducted. Is there a way commissioners can require land use planning to be studied prior to final approval?

Has there been any analysis or assessment of the potential impacts on safety, traffic flow, and overall compatibility due to the interaction between studio-related vehicles and the diverse mix of transportation modes and livestock in the area?

Are there any specific mitigation measures or design considerations being proposed to address the potential conflicts and ensure the safe coexistence of the proposed Shadowbox Studios project with the existing land uses and shared roadways?

How will the proposed project address concerns related to the potential disruption of the current peaceful and rural character of the area, considering the presence of non-motorized transportation modes and livestock in the vicinity?

Has there been any community input or feedback regarding the potential compatibility issues between the Shadowbox Studios project and the existing land uses in the area? Have the concerns raised by residents, businesses, or other stakeholders influenced the planning commission's considerations on this matter?

Are there any plans for ongoing monitoring and evaluation of the compatibility between the proposed studio project and the existing land uses? Will there be mechanisms in place to address any unforeseen issues, adapt to changing circumstances, and ensure ongoing compatibility?

Thank you for your attention to these questions. I greatly appreciate your insights and clarification regarding the absence of a study on incompatible land use in the Draft EIR for the Shadowbox Studios project. Understanding the considerations and measures taken to address potential compatibility issues will provide valuable information for assessing the project's impact on the surrounding area and its ability to coexist harmoniously with existing land uses.

I look forward to your response.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about the potential scenarios and considerations surrounding the Shadowbox Studios project in the event that some or most of the sound stages are not rented upon completion. Given the evolving dynamics of the entertainment industry and the construction of new studio inventory throughout Los Angeles, I would appreciate your response to the following questions:

Has there been an assessment of the market demand for sound stages in the Santa Clarita area, taking into account the construction of new studio facilities in Los Angeles? What factors were considered in determining the feasibility and potential occupancy of the sound stages within the Shadowbox Studios project?

Are there any contingency plans in place in the event that some or most of the sound stages remain unrented after the completion of the Shadowbox Studios project? How will the project adapt to such a situation?

Has there been an analysis of the potential economic impact on the studio and the surrounding area if the sound stages are not rented as expected? What measures will be taken to mitigate any negative effects on the local economy?

Are there any plans or strategies in place to attract potential tenants and promote the utilization of the sound stages within the Shadowbox Studios project? How will the project actively market itself to the entertainment industry and showcase its unique features or advantages?

Has there been consideration given to diversifying the potential use of the sound stages beyond traditional film and television production, such as accommodating virtual reality or augmented reality experiences, live performances, or other innovative content creation?

What steps will be taken to actively engage with production companies, content creators, and industry professionals to understand their needs and tailor the offerings of the Shadowbox Studios project to align with their requirements and preferences?

Will there be flexibility in terms of leasing agreements, rates, or other incentives to attract tenants and promote the utilization of the sound stages within the Shadowbox Studios project?

Are there any plans to collaborate with local and regional film commissions, industry associations, or organizations to foster partnerships and enhance the visibility and attractiveness of the Shadowbox Studios project?

Thank you for your attention to these questions. I look forward to your insights and clarification regarding the potential scenarios and considerations related to the occupancy of sound stages within the Shadowbox Studios project.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about how the planning commission plans to address deficiencies and the issue of incompatibility between the proposed studio project and the Placerita Canyon Special Standards District as well as the current zoning regulations. I would appreciate your insights and response to the following questions:

What specific provisions or regulations within the Placerita Canyon Special Standards District and current zoning are considered compatible with the proposed studio project? How does the planning commission plan to address what is not compatible during the evaluation and approval process?

Has there been any consideration given to potential amendments or modifications to the Placerita Canyon Special Standards District or zoning regulations to accommodate the studio project? If so, what would be the process and criteria for making such changes, and how would they be reconciled with the established planning guidelines and objectives?

In cases where incompatibilities cannot be readily resolved, what alternatives or options might be explored to mitigate the conflicts between the proposed studio project and the Placerita Canyon Special Standards District or current zoning? Are there any provisions for variances, conditional use permits, or other mechanisms that could potentially allow for a balanced and mutually beneficial outcome?

What role does public input and community engagement play in addressing the incompatibilities between the studio project and the Placerita Canyon Special Standards District or current zoning? How would the concerns and perspectives of residents and stakeholders be taken into account during the decision-making process? A three-minute speaking opportunity during a public meeting is insufficient.

Are there any precedents or examples of similar cases where incompatibilities between development projects and established planning regulations were successfully resolved? What lessons or insights could be drawn from those experiences to guide the planning commission's approach in addressing the current situation?

Considering the importance of maintaining the integrity of the Placerita Canyon Special Standards District and existing zoning regulations, what measures will be taken to ensure that any modifications or exceptions granted for the studio project do not set a precedent that could undermine the established planning framework or create inconsistencies in future development decisions?

Thank you for your attention to these questions. I greatly appreciate your insights and clarification regarding how the planning commission plans to address the incompatibility between the proposed studio project and the Placerita Canyon Special Standards District as well as the current zoning regulations.

Sincerely,

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to inquire about how the planning commission intends to address the issue of incompatibility between the proposed studio project and the Placerita Canyon Special Standards District and current zoning regulations. I would appreciate your insights and response to the following questions:

What specific provisions of the Placerita Canyon Special Standards District and current zoning regulations will need to be changed for the proposed studio project to be approved? How do the existing regulations and protections differ from the requirements and guidelines set forth by the studio project?

Has there been any assessment or evaluation conducted to determine the extent of the incompatibility between the proposed studio project and the Placerita Canyon Special Standards District? What factors were considered in identifying the areas of non-compliance or incompatibility?

Considering the incompatibility between the project and the Special Standards District and zoning regulations, what steps or measures will the planning commission take to address this issue? Are there any provisions or conditions of approval that will be imposed to ensure compliance with the Placerita Canyon Special Standards District and current zoning requirements?

Will any modifications or variances be granted to accommodate the studio project within the Placerita Canyon Special Standards District and current zoning regulations? If so, what criteria or justifications will be used to determine the suitability and acceptability of such modifications or variances?

How will the planning commission balance the need for economic development and job creation that the studio project may bring with the preservation of the Placerita Canyon Special Standards District and adherence to current zoning regulations? What considerations will be given to protect the integrity and character of the surrounding area while accommodating the proposed development? Will the studio be required to make a cash donation to the Placerita Canyon Property Owners Association to further preservation of the canyon as a condition of approval?

Has there been any engagement or consultation with residents, local businesses, or other stakeholders in the Placerita Canyon area to gather their feedback and concerns regarding the compatibility of the studio project with the Special Standards District and current zoning regulations? If so, how has this feedback influenced the planning commission's considerations and decision-making process?

Thank you for your attention to these questions. I greatly appreciate your insights and clarification regarding how the planning commission intends to address the incompatibility of the studio project with the Placerita Canyon Special Standards District and current zoning regulations.

MASTER CASE NO: 21-109
Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my concerns regarding the deficiencies in the Draft Environmental Impact Report for the Shadowbox Studios project, particularly in relation to the land use and planning aspects. It has come to my attention that the proposed voting district map designates Placerita Canyon residents in a minority district, which should have triggered a study considering their minority status. Additionally, the EIR acknowledges farm equipment as an example of an incompatible land use, which also should have prompted further analysis. I respectfully request your attention and consideration to the following points:

Acknowledging the minority status of Placerita Canyon residents in the proposed voting district map, why was a study on land use and planning not conducted in the Draft EIR? Given that minority status often raises unique concerns and considerations, it is important to properly evaluate the impacts of the project on these communities and their land use patterns.

What criteria or guidelines were used to determine that a study on land use and planning was not necessary for the Shadowbox Studios project? Were these criteria consistent with the requirements of the California Environmental Quality Act (CEQA) or other applicable regulations?

Has there been any assessment or analysis conducted to evaluate the potential impacts and compatibility of the project with the existing land use and planning in Placerita Canyon? If not, what steps will be taken to ensure that a thorough evaluation is conducted, considering the shared use of roads by tractors, horses, golf carts, pedestrians, and other types of livestock?

Will the planning commission acknowledge the deficiencies in the Draft EIR and provide city staff and consultants with the necessary resources and time to conduct a proper Land Use and Planning study? It is crucial to address any shortcomings in the environmental documents to ensure a comprehensive evaluation of the project's impacts and compatibility with the surrounding land use patterns.

How will the planning commission ensure that all necessary studies and analyses, including a Land Use and Planning study, are conducted to adequately assess the impacts of the Shadowbox Studios project on Placerita Canyon and its residents? Will there be opportunities for community input and engagement during this process?

Will there be provisions or conditions imposed on the project to mitigate any potential adverse impacts on the land use and planning of Placerita Canyon? Are there plans to incorporate measures that promote the safe coexistence of different modes of transportation and address the concerns raised by the shared use of roads by various types of vehicles, pedestrians, and livestock?

What actions will be taken to address the deficiencies in the Draft EIR and ensure compliance with relevant environmental regulations? Will there be an opportunity to update and supplement the EIR to include the necessary studies and analyses related to land use and planning?

I appreciate your attention to these matters and your commitment to a thorough evaluation of the Shadowbox Studios project. Considering the concerns raised by the minority status of Placerita Canyon residents and the potential impacts on land use and planning, it is essential to conduct comprehensive studies and engage in meaningful dialogue with the community. I trust that the planning commission will give due consideration to these concerns and take appropriate actions to address the deficiencies in the Draft EIR

Sincerely,

Name: Yadira Zamora

Address: 25015 Nadwell Ave Newhall Ca

Shadowbox Studios Project
Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to further inquire about the feasibility of establishing a secondary entrance from Circle J for the north parking lot of the proposed Shadowbox Studios project, and to also explore the potential of incorporating the flyover bridge at the Via Princessa intersection. These measures have been suggested as potential solutions to alleviate traffic congestion at the Arch and 13th intersection.

Has there been any thorough evaluation of the feasibility and potential benefits of establishing a secondary entrance from Circle J for the north parking lot of the Shadowbox Studios project? If not, could the planning commission undertake a comprehensive analysis of this option, considering its potential to alleviate traffic congestion and improve accessibility to the studio campus?

In addition to a secondary entrance from Circle J, has there been any consideration given to constructing a flyover bridge at the Via Princessa intersection? Such a bridge could provide an alternative route for vehicles, bypassing the Arch and 13th intersection altogether. Could the planning commission explore the feasibility and potential benefits of this infrastructure improvement as a means to further alleviate traffic congestion in the area?

If a flyover bridge at the Via Princessa intersection were to be considered, what are the main technical, engineering, and environmental factors that need to be assessed? Are there any potential challenges or constraints that would need to be addressed, such as land availability, impact on surrounding properties, or compliance with regulatory requirements?

Have any traffic impact studies or assessments been conducted to evaluate the potential effects of both a secondary entrance from Circle J and a flyover bridge at the Via Princessa intersection? If so, what were the findings of these studies, and how were they taken into account during the planning process?

Considering the potential benefits of both a secondary entrance from Circle J and a flyover bridge at the Via Princessa intersection, what level of coordination and collaboration would be required between the City of Santa Clarita, the planning commission, and other relevant stakeholders to successfully implement these infrastructure improvements?

How would the inclusion of a secondary entrance from Circle J and a flyover bridge at the Via Princessa intersection align with the broader transportation and infrastructure plans for the Santa Clarita area? Are there existing proposals or initiatives that these improvements could complement or support?

Are there any alternative solutions or approaches that have been explored to address traffic congestion at the Arch and 13th intersection? If so, what were these alternatives, and why were they not deemed suitable for the project?

Thank you for your attention to these questions. I greatly appreciate your insights and clarification regarding the feasibility of a secondary entrance from Circle J, the potential for a flyover bridge at the Via Princessa intersection, and any other potential solutions to alleviate traffic congestion. Understanding the considerations and potential improvements related to traffic flow and accessibility will contribute to a comprehensive and informed decision-making process.

Re: Comments to the DEIR

Dear Santa Clarita Planning Commission,

I am writing to express my deep concerns regarding the potential negative impact of the proposed Shadowbox Studios project on the evacuation routes for residents of Placerita Canyon. With the addition of approximately 3,000 vehicles and trucks associated with the studio, there is a significant risk of congestion and increased difficulty for residents to evacuate during emergencies.

Has there been a thorough assessment of the potential impact of the additional 3,000 vehicles and trucks from the Shadowbox Studios project on the existing evacuation routes for residents of Placerita Canyon? If so, what were the findings of this assessment, and how have they been taken into consideration during the planning process?

What measures are being taken to ensure that the increased traffic from the studio project does not exacerbate congestion on the evacuation routes during emergencies? Are there plans to expand or improve the capacity of the evacuation routes to accommodate both residents and the additional vehicles associated with the studio project?

Are there any alternative routes or contingency plans being considered to alleviate the potential strain on the existing evacuation routes due to the additional vehicles from the Shadowbox Studios project? If not, what considerations are being given to address this significant concern and ensure the safety of residents in the event of an emergency?

Has there been any coordination or collaboration with emergency response agencies to address the potential challenges faced by residents during evacuations, considering the increased traffic from the studio project? Are there joint efforts to develop strategies and protocols that prioritize the safety and well-being of residents while ensuring efficient traffic management during emergencies?

Are there any requirements or conditions being imposed on the Shadowbox Studios project to mitigate the impact on the evacuation routes and ensure the safety of residents? For example, are there limitations on the timing of studio operations during peak evacuation hours or requirements for the studio to provide additional support or resources for emergency preparedness and response?

How will the effectiveness of the measures taken to address the impact on evacuation routes be monitored and evaluated? Will there be mechanisms in place to make adjustments or modifications if unforeseen issues arise or if it is determined that additional measures are necessary to ensure the safe evacuation of residents?

Have residents of Placerita Canyon been consulted or involved in the decision-making process regarding the potential impact on evacuation routes? If so, what feedback or concerns have been expressed by residents, and how have these influenced the planning commission's considerations?

Thank you for your attention to these additional concerns. I greatly appreciate your insights and clarification regarding the potential negative impact of the Shadowbox Studios project on the evacuation routes for residents of Placerita Canyon. Understanding the measures being taken to address these concerns and prioritize the safety of residents is crucial for the overall well-being of the community.

Shadowbox Studios Project
Re: Comments to the DEIR

To the Santa Clarita Planning Commission,

I am writing to you today as a long-time resident of Placerita Canyon. My name is Lola, but most people around here know me as "the Egg Lady." I've spent my life first connected to the entertainment industry, then caring for horses, and now I tend my chickens. I don't own a computer or a cell phone so I'm relying upon the kindness of a neighbor to help type this letter. Having lived in this beautiful canyon since 1961, I have witnessed the changes and challenges that have come our way over the years. Today, I am deeply concerned about the proposed Shadowbox project and its potential impact on our community.

First, I cannot help but wonder why the Shadowbox project needs to be so big. The size and scale of the project seem overwhelming, and I worry about the consequences it may bring. Placerita Canyon has always been a place of natural beauty, and I fear that such a massive development will irreversibly change the character of our community. Our canyon has always been a peaceful and close-knit community, and I am afraid that this massive development will disrupt the very essence of what makes Placerita Canyon who we are and what we represent.

One particular concern that keeps me awake at night is the impact of the Dockweiler Drive extension. I firmly believe that it will "kill us" as the increased traffic will undoubtedly congest our already narrow roads. Even if Shadowbox builds 20 lanes, stop still means stop, and no one moves. Our canyon is prone to wildfires and flooding, and the thought of being trapped in an evacuation situation with the proposed traffic patterns sends shivers down my spine. The increased congestion will not only cause gridlock and inconvenience but more importantly put our safety at risk. It's a recipe for disaster.

Living in Placerita Canyon, we are no strangers to the threats of wildfires and flooding. These natural disasters can strike without warning, and we rely on our existing evacuation routes to ensure our safety. The Shadowbox project, with its thousands of additional vehicles and trucks, utilizing the same evacuation routes as residents, is another recipe for disaster. I fear that in times of emergency, our already limited evacuation options will become completely overwhelmed, leaving us vulnerable, trapped and doomed.

While I understand the need for development and progress, I do not believe that the Shadowbox project is the best solution for our community. In fact, I find it absolutely crazy for the city to even consider approving such a massive development in our canyon. It seems as though the decision-makers must be out of their minds, overlooking the concerns and well-being of the residents who have called this place home for decades.

I ask you to carefully consider the long-term implications of the Shadowbox project on our community. Please listen to the voices of the residents who have dedicated their lives to preserving the rural and equestrian Placerita Canyon. Please prioritize the safety and well-being of our community over the glamour of a movie studio facility. Even now there's nothing going on in the studios around us. Melody Ranch doesn't look to have any active projects. Disney Ranch was put on indefinate hold. What happens if Shadowbox sits empty?

Thank you for taking the time to read and answer my concerns. I trust that you will approach this decision with wisdom, empathy, and a deep understanding of the impact it will have on Placerita Canyon and its residents.

Sincerely,

Name: Lola Williams

Address: 21645 Clearedale St. Newhall CA. 91321

UPDATED CALIFORNIA NATURAL DIVERSITY DATABASE QUERY

SciName	ComName	Taxon Group	Elm Code	Total Occs	FedList	CalList	GRank	SRank	RPlant Rank	OthrStatus	Habitats	GenHab	MicroHab	Return Occs
Accipiter cooperii	Cooper's hawk	Birds	ABNKC12040	118	None	None	G5	S4		CDFW_WL-Watch List | IUCN_LC-Least Concern	Cismontane woodland | Riparian forest | Riparian woodland | Upper montane coniferous forest	Woodland, chiefly of open, interrupted or marginal type.	Nest sites mainly in riparian growths of deciduous trees, as in canyon bottoms on river flood-plains; also, live oaks.	2
Aimophila ruficeps canescens	southern California rufous-crowned sparrow	Birds	ABPBX91091	235	None	None	G5T3	S3		CDFW_WL-Watch List	Chaparral | Coastal scrub	Resident in Southern California coastal sage scrub and sparse mixed chaparral.	Frequents relatively steep, often rocky hillsides with grass and forb patches.	5
Ammodramus savannarum	grasshopper sparrow	Birds	ABPBXA0020	27	None	None	G5	S3		CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Valley & foothill grassland	Dense grasslands on rolling hills, lowland plains, in valleys and on hillsides on lower mountain slopes.	Favors native grasslands with a mix of grasses, forbs and scattered shrubs. Loosely colonial when nesting.	1
Anaxyrus californicus	arroyo toad	Amphibians	AAABB01230	139	Endangered	None	G2G3	S2		CDFW_SSC-Species of Special Concern | IUCN_EN-Endangered	Desert wash | Riparian scrub | Riparian woodland | South coast flowing waters | South coast standing waters	Semi-arid regions near washes or intermittent streams, including valley-foothill and desert riparian, desert wash, etc.	Rivers with sandy banks, willows, cottonwoods, and sycamores; loose, gravelly areas of streams in drier parts of range.	2
Anniella spp.	California legless lizard	Reptiles	ARACC01070	127	None	None	G3G4	S3S4		CDFW_SSC-Species of Special Concern		Contra Costa County south to San Diego, within a variety of open habitats.This element represents California records of Anniella not yet assigned to new species within the Anniella pulchra complex.	Variety of habitats; generally in moist, loose soil. They prefer soils with a high moisture content.	21
Antrozous pallidus	pallid bat	Mammals	AMACC10010	420	None	None	G4	S3		BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern | USFS_S-Sensitive	Chaparral | Coastal scrub | Desert wash | Great Basin grassland | Great Basin scrub | Mojavean desert scrub | Riparian woodland | Sonoran desert scrub | Upper montane coniferous forest | Valley & foothill grassland	Deserts, grasslands, shrublands, woodlands and forests. Most common in open, dry habitats with rocky areas for roosting.	Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	1
Arizona elegans occidentalis	California glossy snake	Reptiles	ARADB01017	260	None	None	G5T2	S2		CDFW_SSC-Species of Special Concern		Patchily distributed from the eastern portion of San Francisco Bay, southern San Joaquin Valley, and the Coast, Transverse, and Peninsular ranges, south to Baja California.	Generalist reported from a range of scrub and grassland habitats, often with loose or sandy soils.	7
Artemisiospiza belli belli	Bell's sparrow	Birds	ABPBX97021	61	None	None	G5T2T3	S3		CDFW_WL-Watch List	Chaparral | Coastal scrub	Nests in chaparral dominated by fairly dense stands of chamise. Found in coastal sage scrub in south of range.	Nest located on the ground beneath a shrub or in a shrub 6-18 inches above ground. Territories about 50 yds apart.	4
Aspidoscelis tigris stejnegeri	coastal whiptail	Reptiles	ARACJ02143	148	None	None	G5T5	S3		CDFW_SSC-Species of Special Concern		Found in deserts and semi-arid areas with sparse vegetation and open areas. Also found in woodland and riparian areas.	Ground may be firm soil, sandy, or rocky.	14
Athene cunicularia	burrowing owl	Birds	ABNSB10010	2011	None	None	G4	S3		BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern | USFWS_BCC-Birds of Conservation Concern	Coastal prairie | Coastal scrub | Great Basin grassland | Great Basin scrub | Mojavean desert scrub | Sonoran desert scrub | Valley & foothill grassland	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation.	Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	6

UPDATED CALIFORNIA NATURAL DIVERSITY DATABASE QUERY

SciName	ComName	Taxon Group	Elm Code	Total Occs	FedList	CalList	GRank	SRank	RPlant Rank	OthrStatus	Habitats	GenHab	MicroHab	Return Occs
Berberis nevinii	Nevin's barberry	Dicots	PDBER060A0	32	Endangered	Endangered	G1	S1	1B.1	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | SB_SBBG-Santa Barbara Botanic Garden	Chaparral | Cismontane woodland | Coastal scrub | Riparian scrub	Chaparral, cismontane woodland, coastal scrub, riparian scrub.	On steep, N-facing slopes or in low grade sandy washes. 90-1590 m.	4
Bombus crotchii	Crotch bumble bee	Insects	IIHYM24480	437	None	Candidate Endangered	G2	S2		IUCN_EN-Endangered		Coastal California east to the Sierra-Cascade crest and south into Mexico.	Food plant genera include Antirrhinum, Phacelia, Clarkia, Dendromecon, Eschscholzia, and Eriogonum.	10
Branchinecta lynchi	vernal pool fairy shrimp	Crustaceans	ICBRA03030	796	Threatened	None	G3	S3		IUCN_VU-Vulnerable	Valley & foothill grassland | Vernal pool | Wetland	Endemic to the grasslands of the Central Valley, Central Coast mountains, and South Coast mountains, in astatic rain-filled pools.	Inhabit small, clear-water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression pools.	2
Buteo swainsoni	Swainson's hawk	Birds	ABNKC19070	2561	None	Threatened	G5	S4		BLM_S-Sensitive | IUCN_LC-Least Concern	Great Basin grassland | Riparian forest | Riparian woodland | Valley & foothill grassland	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands with groves or lines of trees.	Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	3
California Walnut Woodland	California Walnut Woodland	Woodland	CTT71210CA	76	None	None	G2	S2.1			Cismontane woodland			16
Calochortus clavatus var. gracilis	slender mariposa-lily	Monocots	PMLIL0D096	143	None	None	G4T2T3	S2S3	1B.2	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | USFS_S-Sensitive	Chaparral | Coastal scrub | Valley & foothill grassland	Chaparral, coastal scrub, valley and foothill grassland.	Shaded foothill canyons; often on grassy slopes within other habitat. 210-1815 m.	92
Calochortus fimbriatus	late-flowered mariposa-lily	Monocots	PMLIL0D1J2	93	None	None	G3	S3	1B.3	SB_SBBG-Santa Barbara Botanic Garden | USFS_S-Sensitive	Chaparral | Cismontane woodland | Riparian woodland | Ultramafic	Chaparral, cismontane woodland, riparian woodland.	Dry, open coastal woodland, chaparral; on serpentine. 270-1645 m.	3
Calochortus palmeri var. palmeri	Palmer's mariposa-lily	Monocots	PMLIL0D122	111	None	None	G3T2	S2	1B.2	BLM_S-Sensitive | SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | SB_SBBG-Santa Barbara Botanic Garden | USFS_S-Sensitive	Chaparral | Lower montane coniferous forest | Meadow & seep	Meadows and seeps, chaparral, lower montane coniferous forest.	Vernally moist places in yellow-pine forest, chaparral. 195-2530 m.	1
Calochortus plummerae	Plummer's mariposa-lily	Monocots	PMLIL0D150	230	None	None	G4	S4	4.2	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden	Chaparral | Cismontane woodland | Coastal scrub | Lower montane coniferous forest | Valley & foothill grassland	Coastal scrub, chaparral, valley and foothill grassland, cismontane woodland, lower montane coniferous forest.	Occurs on rocky and sandy sites, usually of granitic or alluvial material. Can be very common after fire. 60-2500 m.	18
Calystegia peirsonii	Peirson's morning-glory	Dicots	PDCON040A0	26	None	None	G4	S4	4.2		Chaparral | Chenopod scrub | Cismontane woodland | Coastal scrub | Lower montane coniferous forest | Valley & foothill grassland	Chaparral, coastal scrub, chenopod scrub, cismontane woodland, lower montane coniferous forest, valley and foothill grassland.	Often in disturbed areas or along roadsides or in grassy, open areas. 30-1500 m.	13
Catostomus santaanae	Santa Ana sucker	Fish	AFCJC02190	28	Threatened	None	G1	S1		AFS_TH-Threatened | IUCN_EN-Endangered	Aquatic | South coast flowing waters	Endemic to Los Angeles Basin south coastal streams.	Habitat generalists, but prefer sand-rubble-boulder bottoms, cool, clear water, and algae.	3
Chorizanthe parryi var. fernandina	San Fernando Valley spineflower	Dicots	PDPGN040J1	21	None	Endangered	G2T1	S1	1B.1	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | USFS_S-Sensitive	Coastal scrub | Valley & foothill grassland	Coastal scrub, valley and foothill grassland.	Sandy soils. 15-1015 m.	15

UPDATED CALIFORNIA NATURAL DIVERSITY DATABASE QUERY

SciName	ComName	Taxon Group	Elm Code	Total Occs	FedList	CalList	GRank	SRank	RPlant Rank	OthrStatus	Habitats	GenHab	MicroHab	Return Occs
Chorizanthe parryi var. parryi	Parry's spineflower	Dicots	PDPGN040J2	150	None	None	G3T2	S2	1B.1	BLM_S-Sensitive | SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | USFS_S-Sensitive	Chaparral | Cismontane woodland | Coastal scrub | Valley & foothill grassland	Coastal scrub, chaparral, cismontane woodland, valley and foothill grassland.	Dry slopes and flats; sometimes at interface of 2 vegetation types, such as chaparral and oak woodland. Dry, sandy soils. 90-1220 m.	2
Cismontane Alkali Marsh	Cismontane Alkali Marsh	Marsh	CTT52310CA	4	None	None	G1	S1.1			Marsh & swamp | Wetland			1
Coccyzus americanus occidentalis	western yellow-billed cuckoo	Birds	ABNRB02022	165	Threatened	Endangered	G5T2T3	S1		BLM_S-Sensitive | USFS_S-Sensitive	Riparian forest	Riparian forest nester, along the broad, lower flood-bottoms of larger river systems.	Nests in riparian jungles of willow, often mixed with cottonwoods, with lower story of blackberry, nettles, or wild grape.	2
Corynorhinus townsendii	Townsend's big-eared bat	Mammals	AMACC08010	635	None	None	G4	S2		BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern | USFS_S-Sensitive	Broadleaved upland forest | Chaparral | Chenopod scrub | Great Basin grassland | Great Basin scrub | Joshua tree woodland | Lower montane coniferous forest | Meadow & seep | Mojavean desert scrub | Riparian forest | Riparian woodland | Sonoran desert scrub | Sonoran thorn woodland | Upper montane coniferous forest | Valley & foothill grassland	Throughout California in a wide variety of habitats. Most common in mesic sites.	Roosts in the open, hanging from walls and ceilings. Roosting sites limiting. Extremely sensitive to human disturbance.	2
Danaus plexippus plexippus pop. 1	monarch - California overwintering population	Insects	IILEPP2012	391	Candidate	None	G4T1T2Q	S2		IUCN_EN-Endangered | USFS_S-Sensitive	Closed-cone coniferous forest	Winter roost sites extend along the coast from northern Mendocino to Baja California, Mexico.	Roosts located in wind-protected tree groves (eucalyptus, Monterey pine, cypress), with nectar and water sources nearby.	1
Deinandra minthornii	Santa Susana tarplant	Dicots	PDAST4R0J0	35	None	Rare	G2	S2	1B.2	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden	Chaparral | Coastal scrub	Chaparral, coastal scrub.	On sandstone outcrops and crevices, in shrubland. 280-705 m.	11
Dodecahema leptoceras	slender-horned spineflower	Dicots	PDPGN0V010	42	Endangered	Endangered	G1	S1	1B.1	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden	Chaparral | Cismontane woodland | Coastal scrub	Chaparral, cismontane woodland, coastal scrub (alluvial fan sage scrub).	Flood deposited terraces and washes; associates include Encelia, Dalea, Lepidospartum, etc. Sandy soils. 200-765 m.	3
Elanus leucurus	white-tailed kite	Birds	ABNKC06010	184	None	None	G5	S3S4		BLM_S-Sensitive | CDFW_FP-Fully Protected | IUCN_LC-Least Concern	Cismontane woodland | Marsh & swamp | Riparian woodland | Valley & foothill grassland | Wetland	Rolling foothills and valley margins with scattered oaks and river bottomlands or marshes next to deciduous woodland.	Open grasslands, meadows, or marshes for foraging close to isolated, dense-topped trees for nesting and perching.	1
Emys marmorata	western pond turtle	Reptiles	ARAAD02030	1424	None	None	G3G4	S3		BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_VU-Vulnerable | USFS_S-Sensitive	Aquatic | Artificial flowing waters | Klamath/North coast flowing waters | Klamath/North coast standing waters | Marsh & swamp | Sacramento/San Joaquin flowing waters | Sacramento/San Joaquin standing waters | South coast flowing waters | South coast standing waters | Wetland	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6000 ft elevation.	Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 km from water for egg-laying.	12

UPDATED CALIFORNIA NATURAL DIVERSITY DATABASE QUERY

SciName	ComName	Taxon Group	Elm Code	Total Occs	FedList	CalList	GRank	SRank	RPlant Rank	OthrStatus	Habitats	GenHab	MicroHab	Return Occs
Eremophila alpestris actia	California horned lark	Birds	ABPAT02011	94	None	None	G5T4Q	S4		CDFW_WL-Watch List | IUCN_LC-Least Concern	Marine intertidal & splash zone communities | Meadow & seep	Coastal regions, chiefly from Sonoma County to San Diego County. Also main part of San Joaquin Valley and east to foothills.	Short-grass prairie, "bald" hills, mountain meadows, open coastal plains, fallow grain fields, alkali flats.	1
Euderma maculatum	spotted bat	Mammals	AMACC07010	68	None	None	G4	S3		BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern		Occupies a wide variety of habitats from arid deserts and grasslands through mixed conifer forests.	Feeds over water and along washes. Feeds almost entirely on moths. Needs rock crevices in cliffs or caves for roosting.	1
Eumops perotis californicus	western mastiff bat	Mammals	AMACD02011	296	None	None	G4G5T4	S3S4		BLM_S-Sensitive | CDFW_SSC-Species of Special Concern	Chaparral | Cismontane woodland | Coastal scrub | Valley & foothill grassland	Many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, chaparral, etc.	Roosts in crevices in cliff faces, high buildings, trees and tunnels.	4
Euphydryas editha quino	quino checkerspot butterfly	Insects	IILEPK405L	186	Endangered	None	G5T1T2	S1S2			Chaparral | Coastal scrub	Sunny openings within chaparral and coastal sage shrublands in parts of Riverside and San Diego counties.	Hills and mesas near the coast. Need high densities of food plants Plantago erecta, P. insularis, and Orthocarpus purpurescens.	1
Falco mexicanus	prairie falcon	Birds	ABNKD06090	451	None	None	G5	S4		CDFW_WL-Watch List | IUCN_LC-Least Concern	Great Basin grassland | Great Basin scrub | Mojavean desert scrub | Sonoran desert scrub | Valley & foothill grassland	Inhabits dry, open terrain, either level or hilly.	Breeding sites located on cliffs. Forages far afield, even to marshlands and ocean shores.	1
Gasterosteus aculeatus williamsoni	unarmored threespine stickleback	Fish	AFCPA03011	16	Endangered	Endangered	G5T1	S1		AFS_EN-Endangered | CDFW_FP-Fully Protected	Aquatic | South coast flowing waters	Weedy pools, backwaters, and among emergent vegetation at the stream edge in small Southern California streams.	Cool (<24 C), clear water with abundant vegetation.	8
Gila orcuttii	arroyo chub	Fish	AFCJB13120	49	None	None	G2	S2		AFS_VU-Vulnerable | CDFW_SSC-Species of Special Concern | IUCN_VU-Vulnerable | USFS_S-Sensitive	Aquatic | South coast flowing waters	Native to streams from Malibu Creek to San Luis Rey River basin. Introduced into streams in Santa Clara, Ventura, Santa Ynez, Mojave and San Diego river basins.	Slow water stream sections with mud or sand bottoms. Feeds heavily on aquatic vegetation and associated invertebrates.	4
Gymnogyps californianus	California condor	Birds	ABNKA03010	13	Endangered	Endangered	G1	S2		CDF_S-Sensitive | CDFW_FP-Fully Protected | IUCN_CR-Critically Endangered	Chaparral | Valley & foothill grassland	Require vast expanses of open savannah, grasslands, and foothill chaparral in mountain ranges of moderate altitude.	Deep canyons containing clefts in the rocky walls provide nesting sites. Forages up to 100 miles from roost/nest.	1
Harpagonella palmeri	Palmer's grapplinghook	Dicots	PDBOR0H010	57	None	None	G4	S3	4.2	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | SB_CRES-San Diego Zoo CRES Native Gene Seed Bank	Chaparral | Coastal scrub | Valley & foothill grassland	Chaparral, coastal scrub, valley and foothill grassland.	Clay soils; open grassy areas within shrubland. 20-955 m.	1
Helianthus inexpectatus	Newhall sunflower	Dicots	PDAST4N250	1	None	None	G1	S1	1B.1	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden	Marsh & swamp | Meadow & seep | Wetland	Marshes and swamps, riparian woodland.	Freshwater marshes, and seeps. 305 m.	1

UPDATED CALIFORNIA NATURAL DIVERSITY DATABASE QUERY

SciName	ComName	Taxon Group	Elm Code	Total Occs	FedList	CalList	GRank	SRank	RPlant Rank	OthrStatus	Habitats	GenHab	MicroHab	Return Occs
Helminthoglypta fontiphila	Soledad shoulderband	Mollusks	IMGASC2250	12	None	None	G1	S1				All-breathing terrestrial snail. Known from type locality, Little Rock Creek Cyn on north side of San Gabriels; west to Santa Clarita in Soledad Cyn; east to the vicinity of Big Rock Creek; and north to Elizabeth Lake Cyn in the Sierra Pelona Mtns.	Frequently found in riparian habitat (springs, seeps, along streams). May be found in rock piles, flood-borne debris, or under dead yuccas where other cover is not available.	1
Helminthoglypta traskii pacoimensis	Pacoima shoulderband	Mollusks	IMGASC2472	2	None	None	G1G2T1	S1				All-breathing terrestrial snail. Known from type locality, Pacoima Canyon on the west side of the San Gabriel Mountains. Additional specimens from Elizabeth Lake Canyon in the Sierra Pelona Mountains may merit review.	Found mostly under bark and fragments of rotten logs.	2
Helminthoglypta uvasana	Grapevine shoulderband	Mollusks	IMGASC2650	2	None	None	G1	S1				All-breathing terrestrial snail. Known from type locality along Grapevine Creek in Castaic Valley, in the vicinity of Fort Tejon. Additional historical specimen from about 21 mi SSE of type locality, Oak Flat Ranger Station.	Found under downed oak logs in leaf litter, in brush, and in woodrat nests; among valley oak, nettle and poison oak in valley oak woodland grading to chaparral.	1
Horkelia cuneata var. puberula	mesa horkelia	Dicots	PDROS0W045	103	None	None	G4T1	S1	1B.1	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | USFS_S-Sensitive	Chaparral | Cismontane woodland | Coastal scrub	Chaparral, cismontane woodland, coastal scrub.	Sandy or gravelly sites. 15-1645 m.	1
Icteria virens	yellow-breasted chat	Birds	ABPBX24010	101	None	None	G5	S3		CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Riparian forest | Riparian scrub | Riparian woodland	Summer resident; inhabits riparian thickets of willow and other brushy tangles near watercourses.	Nests in low, dense riparian, consisting of willow, blackberry, wild grape; forages and nests within 10 ft of ground.	1
Lanius ludovicianus	loggerhead shrike	Birds	ABPBR01030	110	None	None	G4	S4		CDFW_SSC-Species of Special Concern | IUCN_NT-Near Threatened	Broadleaved upland forest | Desert wash | Joshua tree woodland | Mojavean desert scrub | Pinon & juniper woodlands | Riparian woodland | Sonoran desert scrub	Broken woodlands, savannah, pinyon-juniper, Joshua tree, and riparian woodlands, desert oases, scrub and washes.	Prefers open country for hunting, with perches for scanning, and fairly dense shrubs and brush for nesting.	5
Lasiurus cinereus	hoary bat	Mammals	AMACC05032	238	None	None	G3G4	S4		IUCN_LC-Least Concern	Broadleaved upland forest | Cismontane woodland | Lower montane coniferous forest | North coast coniferous forest	Prefers open habitats or habitat mosaics, with access to trees for cover and open areas or habitat edges for feeding.	Roosts in dense foliage of medium to large trees. Feeds primarily on moths. Requires water.	1
Lepechinia rossii	Ross' pitcher sage	Dicots	PDLAM0V060	3	None	None	G1	S1	1B.2	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | USFS_S-Sensitive	Chaparral	Chaparral.	Soil derived from fine-grained, reddish sedimentary rock. 670-915 m.	2

Lepidium virginicum var. robinsonii	Robinson's pepper-grass	Dicots	PDBRA1M114	142	None	None	G5T3	S3	4.3		Chaparral | Coastal scrub	Chaparral, coastal scrub.	Dry soils, shrubland. 4-1435 m.	1
Lepus californicus bennettii	San Diego black-tailed jackrabbit	Mammals	AMAEB03051	103	None	None	G5T3T4	S3S4			Coastal scrub	Intermediate canopy stages of shrub habitats and open shrub / herbaceous and tree / herbaceous edges.	Coastal sage scrub habitats in Southern California.	2
Lupinus paynei	Payne's bush lupine	Dicots	PDFAB2B580	7	None	None	G1Q	S1	1B.1		Coastal scrub | Riparian scrub | Valley & foothill grassland	Coastal scrub, riparian scrub, valley and foothill grassland.	Sandy. 220-425 m.	4
Macrotus californicus	California leaf-nosed bat	Mammals	AMACB01010	46	None	None	G3G4	S3		BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Riparian scrub | Sonoran desert scrub	Desert riparian, desert wash, desert scrub, desert succulent scrub, alkali scrub and palm oasis habitats.	Needs rocky, rugged terrain with mines or caves for roosting.	1
Mainland Cherry Forest	Mainland Cherry Forest	Forest	CTT81820CA	3	None	None	G1	S1.1			Broadleaved upland forest			3
Malacothamnus davidsonii	Davidson's bush-mallow	Dicots	PDMAL0Q040	78	None	None	G2	S2	1B.2	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden	Chaparral | Cismontane woodland | Coastal scrub | Riparian woodland	Coastal scrub, riparian woodland, chaparral, cismontane woodland.	Sandy washes. 150-1525 m.	17
Navarretia fossalis	spreading navarretia	Dicots	PDPLM0C080	82	Threatened	None	G2	S2	1B.1	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | SB_CRES-San Diego Zoo CRES Native Gene Seed Bank	Alkali playa | Chenopod scrub | Marsh & swamp | Vernal pool | Wetland	Vernal pools, chenopod scrub, marshes and swamps, playas.	San Diego hardpan and San Diego claypan vernal pools; in swales and vernal pools, often surrouded by other habitat types. 15-850 m.	3
Navarretia ojaiensis	Ojai navarretia	Dicots	PDPLM0C130	22	None	None	G2	S2	1B.1	SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | USFS_S-Sensitive	Chaparral | Coastal scrub | Valley & foothill grassland	Chaparral, coastal scrub, valley and foothill grassland.	Openings in shrublands or grasslands. 275-620 m.	5
Navarretia setiloba	Piute Mountains navarretia	Dicots	PDPLM0C0S0	56	None	None	G2	S2	1B.1	BLM_S-Sensitive | SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | USFS_S-Sensitive	Cismontane woodland | Pinon & juniper woodlands | Valley & foothill grassland	Cismontane woodland, pinyon and juniper woodland, valley and foothill grassland.	Red clay soils, or on gravelly loam. 180-1645 m.	3
Neotamias speciosus speciosus	lodgepole chipmunk	Mammals	AMAFB02172	24	None	None	G4T3T4	S2			Chaparral | Upper montane coniferous forest	Summits of isolated Piute, San Bernardino, and San Jacinto mountains. Usually found in open-canopy forests.	Habitat is usually lodgepole pine forests in the San Bernardino Mts and chinquapin slopes in the San Jacinto Mts.	1
Neotoma lepida intermedia	San Diego desert woodrat	Mammals	AMAFF08041	132	None	None	G5T3T4	S3S4		CDFW_SSC-Species of Special Concern	Coastal scrub	Coastal scrub of Southern California from San Diego County to San Luis Obispo County.	Moderate to dense canopies preferred. They are particularly abundant in rock outcrops, rocky cliffs, and slopes.	5
Onychomys torridus ramona	southern grasshopper mouse	Mammals	AMAFF06022	28	None	None	G5T3	S3		CDFW_SSC-Species of Special Concern	Chenopod scrub	Desert areas, especially scrub habitats with friable soils for digging. Prefers low to moderate shrub cover.	Feeds almost exclusively on arthropods, especially scorpions and orthopteran insects.	1
Opuntia basilaris var. brachyclada	short-joint beavertail	Dicots	PDCAC0D053	199	None	None	G5T3	S3	1B.2	BLM_S-Sensitive | SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden | USFS_S-Sensitive	Chaparral | Joshua tree woodland | Mojavean desert scrub | Pinon & juniper woodlands	Chaparral, Joshua tree woodland, Mojavean desert scrub, pinyon and juniper woodland.	Sandy soil or coarse, granitic loam. 425-2015 m.	19

Phrynosoma blainvillii	coast horned lizard	Reptiles	ARACF12100	784	None	None	G4	S4		BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Chaparral | Cismontane woodland | Coastal bluff scrub | Coastal scrub | Desert wash | Pinon & juniper woodlands | Riparian scrub | Riparian woodland | Valley & foothill grassland	Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes.	Open areas for sunning, bushes for cover, patches of loose soil for burial, and abundant supply of ants and other insects.	19
Polioptila californica californica	coastal California gnatcatcher	Birds	ABPBJ08081	1087	Threatened	None	G4G5T3Q	S2		CDFW_SSC-Species of Special Concern	Coastal bluff scrub | Coastal scrub	Obligate, permanent resident of coastal sage scrub below 2500 ft in Southern California.	Low, coastal sage scrub in arid washes, on mesas and slopes. Not all areas classified as coastal sage scrub are occupied.	27
Pseudognaphalium leucocephalum	white rabbit-tobacco	Dicots	PDAST440C0	62	None	None	G4	S2	2B.2		Chaparral | Cismontane woodland | Coastal scrub | Riparian woodland	Riparian woodland, cismontane woodland, coastal scrub, chaparral.	Sandy, gravelly sites. 35-515 m.	6
Rana boylii pop. 6	foothill yellow-legged frog - south coast DPS	Amphibians	AAABH01056	79	Proposed Endar	Endangered	G3T1	S1		BLM_S-Sensitive | USFS_S-Sensitive	Aquatic | Riparian forest | Riparian scrub | Riparian woodland | South coast flowing waters	Southern Coast Ranges from Monterey Bay south through San Gabriel Mountains; west of the Salinas River in Monterey Co, south through Transverse Ranges, and east through San Gabriel Mountains. Historically may have ranged to Baja California.	Partly shaded shallow streams and riffles with a rocky substrate in a variety of habitats. Needs at least some cobble-sized substrate for egg-laying and at least 15 weeks to attain metamorphosis.	2
Rana draytonii	California red-legged frog	Amphibians	AAABH01022	1685	Threatened	None	G2G3	S2S3		CDFW_SSC-Species of Special Concern | IUCN_VU-Vulnerable	Aquatic | Artificial flowing waters | Artificial standing waters | Freshwater marsh | Marsh & swamp | Riparian forest | Riparian scrub | Riparian woodland | Sacramento/San Joaquin flowing waters | Sacramento/San Joaquin standing waters | South coast flowing waters | South coast standing waters | Wetland	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation.	Requires 11-20 weeks of permanent water for larval development. Must have access to estivation habitat.	2
Rana muscosa	southern mountain yellow-legged frog	Amphibians	AAABH01330	186	Endangered	Endangered	G1	S1		CDFW_WL-Watch List | IUCN_EN-Endangered | USFS_S-Sensitive	Aquatic	Disjunct populations known from southern Sierras (northern DPS) and San Gabriel, San Bernardino, and San Jacinto Mtns (southern DPS). Found at 1,000 to 12,000 ft in lakes and creeks that stem from springs and snowmelt. May overwinter under frozen lakes.	Often encountered within a few feet of water. Tadpoles may require 2 - 4 yrs to complete their aquatic development.	1
